Hi Tony-
I don't have the
answer to your question, but am also interested in finding out.
I just
bought a pair of the FRS1400s at a store in Lansing, MI for $79/pair. My
first impression of the radio is pretty high- lots of clean rx audio, no
birdies to
interfere with scanning, nice lcd & backlight, and smooth control
operation. I
wonder how much more, and where, the FRS1600s are available.
(They must
be pretty new, as I haven't found much info yet on the web). I
had high
expectations of these radio, as Uniden usually puts out some hot
units, and so
far I'm not disappointed.
I have seen several other frs in
this price class, but they all were lacking in
some way, such as weak rx
audio, or poor case construction, etc.
I also noticed that these Uniden's
look very similar in styling to the Kenwood
frs radios. The Kenwoods are
good, but expensive.

2302. HELP-remote control of TM-V7A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-25 00:00:00 UTC
From: kf4pxz@cs.com
Message-ID: <19990424235708.12592.00001202@ng40.news.cs.com>
Source record: 110066

I have recently purchased a Kenwood TM V7A. I was under the impression that the radio could be remotely controlled from an HT. Apparently this is not quite the case. According to the manual, and after several attempts with what I have, you have to use a Kenwood HT that has the remote control feature. I find it suprising that Kenwood would create a proprietary signaling system instead of using standard DTMF. I have a Yaesu FT-50r, and I am hopeing that I can use it to emulate a Kenwood HT to remotely control my radio using standard DTMF. Perhaps some of you all could shed some light on this. My HT is less than a year old, so I am not really interested in buying a new handheld. Thank & 73.

Dear Hams;
I have for SALE:
One (1) Kenwood TS-930sat amateur radio transceiver.
I have only the Original Shipping Carton, its in Excellent condition and HAS the built in Auto Antenna Tuner. Everything works.
I had bought it, contemplating getting a higher grade license but have not had the time to do so. It just sits here collecting dust.
I want to get $600 plus shipping from LI, NY! Please, no trades, deals or anything but Cash.
Thanks es 73

2305. Kenwood TM-V7A problem, HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-25 00:00:00 UTC
From: cepler@Stormhaven.org
Message-ID: <7fu9t1$4ld$1@esinet2.esinet.net>
Source record: 110069

Ok, I'm either going crazy or something is wrong with my brand new Kenwood TM-V7A...

I was trying to enable the 'Enter' PF key to be able to enter freq's directly on the microphone keypad (Page 74). I get the 1--.--- display and try to enter something on my Microphone and nothing happens. NADA, ZIP, ZILCH. It just times out and goes back to the freq display. I fired up my HT to check if the keys were working and I can hear a DTMF tone when I transmit on air, so I know the physical keys appear to be functioning. I also tried the 'Microphone control' and I get the same thing, nothing.. I enable it in the menu and try the keys and get no response on the radio.

I have a 3m extension kit on the unit and I haven't tried the face DIRECTLY on the radio yet to see if it's a problem with that cable.

I just wanted to know if anyone has gotten these features to work properly or if anyone has had the same problem that I'm having. The radio appears to function properly in other respects. Frustrating. :(Please carbon copy me via E-Mail or reply via E-Mail... Thanks!

I have found some of these excellent 6B4G valves. 6C4C in Russia is
equivalent to 6B4G and it looks identical to the old Sylvania 6B4G
with double anode stapped together by a metal plate, not the type with
two separate anodes. This 6C4C valves is very well built and is of
high quality. It is unlike the new Sovtek 6B4G which looks more like a
scaled down Sovtek 300B with a single anode.
I don't have many 6C4C left, so e-mail me if you are interested

Best regards,

Arnold Goksoyr

Have you got a laptop? Maybe you could use internet-phone? Get a
nation-wide provider with lots of local dial-ins and you could hook up when
you pull into a truck stop and use the internet-phone to communicate with
home.

2310. Kenwood Items FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-25 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <MTCU2.1055$Dm3.57582@monger.newsread.com>
Source record: 110074

Kenwood Items FS:

Kenwood VB-2530, Two meter FM amplifier, 5 W input will
give about 30 W out; made to be used with TR-2500, but will
work fine with most any 2 m HT. Includes original manual and
box. BNC connector on input, SO-239 on the output.
Looks and works like new. $ 75

Kenwood ST-2 desk charger. Made for TR-2500, but I think
also works with the TR-2600 and maybe others. This is a fast
charger that will charge a standard battery in about 1 1/2 or 2
hours. It can also be used to power the radio, at the same time.
Runs off of 110 V AC. $ 75

Kenwood MS-1 "mobile stand". This unit is used in the car, and
will charge a TR-2500 or TR-2600, and also power it at the same
time. It is not a fast charger, but since it does not use the HT
battery, it make the battery last much longer. Requires 13 V
DC. It also is used as a stand to fasten it to the door.
Includes a nice little light on it, so you can use it at night.
$ 35

Kenwood SMC-25 speaker mic for TR-2500, TR-2600 and
maybe others. With original box and manual. $ 25

Kenwood DC-25. Plugs into cigarette lighter to operate
TR-2500 or TR-2600 two meter Hs off of 13 V DC.
Slides on in place of battery. $ 15

Kenwood MC-43 S mic. This mic has the 8 pin plug, and up and
down switches. It is the same mic that comes new on rigs such
as the TS-440, and many others. New, in box, with original
paper work. $ 55

Kenwood TR-2200, 2 meter FM xcvr. This one is an older radio,
and has 12 channel xtal control. It is almost the same as the
Drake TR-22, except it has high and low power. This one looks
almost like new, and includes the soft protective case. Definitely
collector quality. Some xtals included. I have a fairly good
selection, and will try to accommodate your needs. $ 85

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Source record: 109784

I received the following answer from RT Systems today:

We had discovered the problem after about 200 had left the factory. You are exactly right in you diagnosis and correction.

Should anyone not be able to correct the component as you did, we will be happy to replace the cable for them. They need only contact RT Systems tech support (by phone for brief testing) to confirm the problem and arrange for the replacement.

Also, for those with the hardware, computer and adapter cables, available, there is an upgrade to the software sold to save you the cost of buying a complete package. You might want to investigate this possibility with the next ADMS upgrade.

I just went through the question that you asked. After considering the price of the Alpha 87A and the Icom I decided to go with the VL1000. Plenty of power, easy hookup with Yaesu 1000MP, auto switching and lots of circuit protection (like the Alpha). I could not justify the additional $1000.00 plus not being able to run on 110VAC when needed. How many "S" units do you think you would gain by the additional output of the Alpha = not much. If you can't do it with 1KW then forget it. I'm sure that the Yaesu amp will hold its value as well as the Alpha.

...andy...

P.S. No more tvi, etc. Thats a bonus after running the legal limit with my Heathkit HL2200.

Good for you and your very good attitude. I'm not a big fan of it myself
but I learned it enough to get my advanced ticket and still use it when the
band conditions get bad. What most people are not aware of is that by
international treaty the government MUST keep the code as a requirement for
access to the HF bands. They have no choice.

2328. Question for IC-746 users

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-26 00:00:00 UTC
From: "Dennis B.Sheaffer" <wy3f@desupernet.net>
Message-ID: <3725223F.8D554E90@desupernet.net>
Source record: 109794

Hello,name is Dennis,Call is WY3F.
I just bought a new Ic-746,I love the rig,but I have one question to
other Ic-746 users.
I want to make sure that my rig is working right.
When I work 2 mtrs,6mtrs,and 10 mtrs FM.
I notice that my s-meter differs on my 746 when working in the FM
mode,compared to my back up
rig IC-706.
Using the same antenna,pre-amps ect.
I keep my 746 in the peak meter reading mode,the signal on the peak
seems to be the same that I
get on my 706.
Say my local 2 meter machine ,1 air mile away from my home.
Same antenna ,on my 706 - 60 over,full scale.
Same antenna,on my tm-V7a full scale.
On the 746 the peak will stay lit for a second at 60 over ,then after a
second it drops to 40 over.
I have been going on that peak reading and assume that this is normal ?

Same on a 6 mtr machine on my 706 ,same antenna 20 over steady.
On the 746 the second peak is at 20 over ,but then drops back to say
s-9-10.

The sensitivity seems fine,working stations with no s-reading or above
the noise on 2 mtrs fm.
On the same antenna they can not be herd on my TM-v7a ,or 706.

I saw the post on the FT-100 with a so called fm problem,so I thought I
would ask other Ic-746
users,Tried calling Icom tech support ,never got through,was on hold for
10 min,and said the heck
with it.
I don't want any thread started or I do not want to get flamed please!
Thanks for taking the time to read this msg...
73 de Dennis WY3F.

This is NOT the answer you are looking for, but it may in the long run be a
better one. I suggest you simply replace all of those strange connectors
for one common connector like the Anderson Powerpole. Check
http://www.qsl.net/cvrc/powerpole.html for more info on the Powerpole.

It'll have a "C" logo indicating it was made by the
Svetlana factory. Only place, AFAIk, that made that style
of 6B4-G in Russia, at least in latter years.

The Russians also made 2A3's, but I've never seen one.

I was just wondering why they still keep the Morse code testing requirements if the military doesn't use it anymore and telegraphs are not that common. I think because they stopped it for the marines, there's no point in using it in ham radio either. And if you want to say it is for security, you are not allowed to use codes when intended to obscure meaning.

Oh,man, this is one of those imponderables. Every swapfest I have been to the last three years has someone selling those and the 6 round pin style used on HF radios. They have to come from somewhere. Try some of the second tier radio dealers which advertise in QST and CQ, or start making the rounds of the swapfests. That's where I've gotten all of mine.

I am trying to figure out what the best way to mount a dual band antenna on my Suburban. I have looked at the vertical mounts from Comet and MFJ that clamp onto the rear doors, but that seems like it may damage the window glass. I have seen the mount from Diamond that mounts to the luggage rack of minivans, but they are sure proud of it judging from the price. Any ideas would be appreciated.

OK, you clowns. I have tried to operate from a military Hummer. The acoustic noise is beyond belief, and there is literally nowhere to stick a mag mount. Headphones a must. The domestic model may be a little better, but I wouldn't bet $60K on it. If you seriously consider a diesel, or any other engine, for that matter, take an AM receiver along and listen to it. Some diesel injector timers are noisy, and the microprocessor in any current vehicle is guaranteed to have birdies in one or more of the VHF/UHF ham bands. And, mounting a mobile whip on a non-conductive camper shell is a real load of grief. For good efficiency, you will need a dozen or more bonding straps from the antenna base to the bed, symmetrically disposed around the base. Gary wrote about this several months ago, but I don't remember the exact title of the post.
And, none of this even remotely addresses the mounting space inside.

I guess it's obvious, but it's very easy to put an NMO type mount just above the dome light, and route coax from the dome light hole down the driver's side windshield post. I just pulled the plastic welting off around the top of the door and fish the coax through pretty easily, then push it back on. Then screw on a dual band antenna over the nice ground plane and enjoy.

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost).
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

The Astron RS-20 is only good for 16 amps continuous duty, your rig should have at least 20 amps continuous available, although a little more would be better. I suspect that the power supply may be overheating and tripping the protection fold-back.

An Astron RS(or RM)35 will give you 25 amps continuous and should take care of the problem.

Do you just want a schematic for interest sake, or are you trying to
repair it?

Those date from 1976 and there isn't anything special about the circuitry.
I found an ad for them in the February 1976 issue of 73, but it doesn't
give much detail. There was a review of a Hufco counter some time later
in 73, but mine are not organized well enough to be able to find the
article easily.

It's going to use a chain og 7490's to divide down the timebase, and a
7490 BCD counter/(maybe a latch, a 7475)/decoder per digit. There is
nothing magical about that, and there really is only a set way to connect
them up so you can easily get the details from all kinds of articles zbout
building frequency counters. The only unique circuitry would be the input
circuit and the rewet circuits.

The January 1976 issue of 73 has an article by Jim Huffman titled "A $50
Self-Powered Counter". It's an almost pocket size unit. It has three
digits and a switch to see the rest of the decimal places. It shows the
input circuitry, which is a 40673 MOSFET feeding a 7413 Schmitt trigger.
I'm not looiing it up, but that's what was used in the K2OAW frequency
counter which appeared in a multi-part article in 73 in 1972. I suppose
there might be slight component variations. It gives some more details,
but it's pretty much some stringing together of some module like circuit
boards that the company made.

The February 1976 issue of 73 has another article by Jim Huffman, "What do
You Want to Count?" It sort of goes into the explanation of those
"modules". There's a three digit counting board, and on it each digit has
a 7490 counter, a 7447 decoder and a 7-segment LED readout. It doesn't
bother with a latch. There's another IC at the bottom of the board which
I can't read, but a schematic for the board shows a 7400.

So if nobody comes up with the schematic, the question becomes: "What's inside?". Is it one whole board, or "modules"? What IC's are on the board? Unless the reference frequency comes from the AC line (it's been done!), there will be a crystal oscillator and a chain of 7490's to divide it down, and they will all be wired up the same way, since they are all dividing by ten.

The display units are going to be something like the above and layout itself will show a pattern. If it's a bad readout, you look up the decoder IC and see whether it's meant for common anode or common cathode, and then buy a new one. The pinout may be the same, but you can verify by the wiring on the circuit board, since the decoder is a known absolute.

The input circuitry may require some tracing, but if it's got a MOSFET and a 7413, chances are he used the K2OAW input circuitry, and you jast have to verify the match.

Another popular input circuitry came from a commercial frequency counter and when QST reviewed it, must have been 1972, they showed the circuitry. From there, it showed up in plenty of the frequency counter articles of the time. It was an FET and bipolar transistor buffer capacitor coupled to a 7404 with the first or the first two stages set for linear operation via a feedback resistor. I mention the circuit since it was popular and it might have possibly shown up in the Hufco counter.

If the reference chain is not working (you can check it by figuring out the dividing ratio and hooking an audio amplifier to a low frequency output (the 7490 data sheet will give you the proper pin) for a tone. Try a different crystal (anything in the same range will give you an indication, and if there's still no tone, then inject another oscillator into the input of the first 7490 (such as from one of those crystal oscillators in a metal can that fit a 14pin dip socket). You'll have to figure your other schemes if still nothing comes out; but since they are digital IC's they will either be working or not.

The reset circuitry may be the most difficult since there are all kinds of ways of doing it. On the other hand, if there are no latches the circuit will be even simpler than most that were published.

The counter may look complicated, because of the number of IC's, but most of the wiring is repetitive. Once you've figure out one digit, the rest will be the same.

Of course, if you've got a blank board this may not be too helpful, unless the IC numbers are silk screened on the board. If it's just a blank board, you'd do well to forget it. Not because it's too much trouble to build a frequency counter with such small scale integration IC's, but becuase it used straight 74xx series TTL that used a lot of current and didn't have very high frequency range and you could do it simpler today with better integrated logic, and more likely CMOS or Schottky.

Motorola Radius VHF GM900 Mobile. Model number M01KHK9AN3AN.
136-178MHz, 16 channels, with
5-tone signalling. Cosmetically it is a 10/10. Transmits,
receives, and appears to work just fine, but it is sold as is.
No mounting bracket, power cable or mic included (uses standard
Radius power cable and mic). Will have
programmed before shipping if required. Buyers must prepay with an
Internationally Negotiable money order in
US funds. Buyer pays actual shipping and insurance costs.

You are joking... right? Please tell me that you know better than to
think an S meter is some accurate test of receiver quality.
I just got my FT-100 yesterday and I can not find a fault with anything in it.

Regards,
paul W8KC

Are YOU JOKING ?
What a DUMB ASS !!!!
" I just got my FT100 yesterday and can't find a fault with anything".
Well good for you, I am so happy for you. That just makes my day. Did you sleep with it under your pillow last night?

So now you have a new little baby FT100, by the way, what did you name your new little FT100 ? I am so sick of all these stupid hams that treat their radios like it is one of their children. Whenever they read a negative post on one of the news groups they take it personally. I am so happy that you have a perfect cute little FT100 ! The fact remains that the receiver on my FT100 on VHF and UHF is DEAD. I stated in the original post that the receiver was dead. It was not only the S-Meter reading but it was the actual quality of the receive coming out of the speaker. There was white noise on local repeaters. Would you keep a new radio that gave a S-9 signal on a repeater that was about 2 miles away ? If you would, you must not expect much for your $1350.00.

Thanks for all of the people that sent intelligent responces to me regarding my original post about the problem with the recieve on my FT100. I talked with Yaesu and they said that their is a definite problem with the reciever. I sent it back for replacement.
For some of you who just bought a new FT100, I am so sorry if these posts have upset you in any way. I know how traumatic it can be foe some Hams to read bad things about their new children, I mean radios.
73,

Jim N5JIM

From: al@boltons.demon.co.uk
Message-ID: <3724a82e.40080805@news.demon.co.uk>
Source record: 109948

I have just bought an Alinco DR-03 from HRO and had it shipped to me
in England because, as usual, it's not available here and even if it
was I'd be paying 33% more for the pleasure!

Impressions are that it is very small, very simple and easy to use.
Good sensitivity. Shame it is only 10 Watts out.

It is possible to mod the radio for 26-40 MHz receive but has anyone
found a way of opening up the TX?

Email me for more details about the set.

Message-ID: <3724AB40.CA34BB10@ix.netcom.com>
Source record: 109950
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

With the help of Phil Mills, Steve Davidek and others
we recovered eight 6-foot-tall Canadian Marconi
ship-to-shore 5000 watt transmitters from a dark and
dirty old barn in central Texas. These RF units are
part of Marconi transmitter type TH41B. Tank tuning
caps bigger then a gallon milk jug. Some 807s drive
four 813s, driving a pair of Westinghouse external-anode
forced-air cooled tubes in P-P. The finals don't use sockets-
they have straps that are individually clamped to the tube pins.
Pretty cool.
I'm working on the story to put up on my website this summer.

Is there any chance whatever that someone out there has
any information on the Canadian Marconi TH41B maritime transmitters?

dodge dakota extended cab.
have 4 antennae mounted on bed rails with excellent results.
all use 3/8 x 24tpi mounts.
i use an icom 706 mk none that is separated.
there is a utility 'box' under the seat behind the drivers side that
contains the main body. easy route for coax to outside of truck.
the floor space up front could easily handle an ic 746 on a hump mount
if you want a bigger radio.
excellent truck too. of course the v8 magnum make a lot of diff.

Hey, has anyone done any mods on the Ten Tec 1340 40m transciever? No,
I'm not looking for out of band tx mods. Just what others have done to
their radios, or other Ten Tec QRP line of radios. I've heard of
putting in a multi turn pot for the frequency control, and the
instruction manual talks of putting in the keyer module into the radio;
I'm just looking to for details of what others have done. Thanks.

Hello all,

I'm looking for some Drake units for my Drake collection until I can say
that I have them all. You'll see my list below. Any help or info in finding
them will be most appreciated.
I'm coming over to the Dayton Hamvention this year, and pickup there will be
OK. But I also have long experience in buying used stuff from hams in USA,
Canada and Europe.
I hope to meet some of you at the Drake forum held on Saturday during the
Hamvention. I'm one of the speakers there, and I'm looking forward to show
you some slides of my collection and some of the really rare Drake units.

DRAKE EQUIPMENT WANTED, UPDATED APRIL 26, 1999

* 4-LF LOW FREQUENCY CONVERTER
* AN-5 ANTENNA KIT
* DC24 24 VOLT POWER SUPPLY FOR TR4
* DM2350 DIGITAL MULTIMETER
* HS-1 HEADSET
* IN-4 DC TO DC INVERTER (NOT THE IN-4B)
* LN-5 "INDUCTUBE" AC POWER LINE FILTER
* MMK-33 MOBILE MOUNTING KIT FOR TR-33C
* MODEL 587 AUDIO BAND PASS FILTER
* MR-3 MARINE RECEIVER
* MRT-55 MARINE VHF-TRANSCEIVER, SIMILAR UV-3
* MRT-55C MARINE VHF-TRANSCEIVER, SIMILAR UV-3
* MSR-1 MARINE RECEIVER, 19" wide
* SPEAKER, MATCHING SPEAKER FOR THE 1-A RECEIVER
* THETA 550 COMMUNICATION TERMINAL (RECEIVE ONLY)
* TR-V MARINE VHF-TRANSCEIVER
* TV-300-FMT BAND REJECTION FILTER 88-108MHz
* TV-300-10HW HALF-WAVE HARMONIC FILTER
* TV-300-15HW HALF-WAVE HARMONIC FILTER
* UHF-300-HP HIGH PASS FILTER

radio
> for about the same price

I've considered it because I already owned an FT-10 2m xceiver....they both
use the same batteries and accessories. The VX-5R IS attractively designed
and priced...but would force me to buy a whole different set of
batteries/charger/accessories.

2387. IC-735 keyer speed problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-26 00:00:00 UTC
From: gagnon@gagnon.fakeu-net.com
Message-ID: <3724b11d.1191912@news.u-net.com>
Source record: 109958

As many already know the Icom keyer unit for the ICOM 735 rig uses the mic gain slider control as the keyer speed control. Because it is a log pot the keyer speed is very difficult to adjust, with very little play allowed for great increases in keyer speed -- generally not very acceptable.

I have heard of certain modifications for this problem - such as using the squelch control instead etc. Does anyone out there have any more definitive info on such mods???

I would really appreciate a response.

Cheers....Larry Gagnon MW0AWC

2388. FT-2500M tone burst for Europe?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-26 00:00:00 UTC
From: gagnon@gagnon.fakeu-net.com
Message-ID: <3724b132.1213391@news.u-net.com>
Source record: 109959

I have an FT-2500m, bought in the USA but am using it in Europe. I have obtained the modification from Yaesu (jumper across JP2006) to enable the 1750Hz tone burst necessary for some European repeaters. The mod does not seem to work with the USA microphone (MH-27).

Does anyone else have this problem and know of a fix???

Your help would be appreciated.

Cheers....Larry Gagnon MW0AWC

2389. Morse code

I was just wondering why they still keep the Morse code testing requirements if the military doesn't use it anymore and telegraphs are not that common. I think because they stopped it for the marines, there's no point in using it in ham radio either.

After thinking it all over I have decided to lower the price on my rig to;

1. Kenwood G71A (Mint Shape!) 235.00
2. Rapid Charger for above 45.00
3. Extra Battery 20.00

Or the Total package for only 285.00!!!

Hi all
I have a for sale TEK Calibration Kits.
Model : KQ-8
* 067-0587-02 Calibration Fixture Signal Standarizer.
* 067-0589-00 Calibration Fixture Plug -in Extender.
* 067-0616-00 Calibration Fixture Flexible Plug-in Extender.
* 067-0616-00 Calibration Fixture Flexible Plug-in Extender.
$400.00 plus shipping
In carrying cases.
Good working condition.
Tel:714-778-5151
Thanks

The Icom 706MKII manual indicates the touchtone pad mic for the rig is the HM-77A. I have the HM-77 and it works fine, except the audio is done quite a bit from the stock mic (HM-103--no tone pad). I have heard there are some mic mods to increase the audio. Does anyone know the diff bt the 77 and 77A or the mods for the stock mic or how to make a 77 into a 77A? K8SWD

Price is outragous just like the Icom amp--I'd buy the Alpha for the house,
a screwdriver antenna, a IC-706MKII or FT-100 and a cheap car and go mobile
also for the price Icom and Yeasu want for those amps! K8swd

I am not sure, all is written i cyrillic letters and I don't read that very well.. A sheet with techical data is enclosed with each valve, and the last line reads: 3 4587 03.79 THp 10 000
The 'H' in THp is not a real H, but looks a bit like H.
The valves has a rhombic logo with the number 54 inside and the letters OTK 71 on the glassbulb. In addition to this there is the coding 6C4C, probably a date code: 85 01 and another logo which looks like a circle with a 'C' inside and three short paralell lines one the left and right of the main circle.

The valves has two getters inside, looks like a saucer upside down.
The base is black, and pin 1, 4 and 6 is missing.

I don't want to become in the code vs. no-code debate, but CW is still very
much in use from everything from local public safety repeaters to maritime
operations. Just tune some of the HF bands, not all the cw is coming from
amateurs, it IS still used.

Aluminum boat on inland lake or big ship on the high seas--great counterpoise and takeoff angles. Land boat--bigger the better. I like Gary's idea of the crew cab Ford--especially if it is a deisel (no ignition noise) but my gas Suburban works good too, can't haul as much behind it, but it carries more kids to the soccer game, has room for some amps and antenna in the back, and has more roof space for vhf/uhf separation and a lot of metal for my SGC-QMS mounted on the glass way back. There are better antennas out there, and better tuning systems, but none that I have found that you can totally ignore going off-road with tree limbs scraping on your roof (and wiping off your uhf/vhf mag mounts) and still allow you to carry on a meaningfull QSO at 500 watts on HF while in motion! Most mast mounted and screwdriver bases would have been destroyed where I have gone with my SGC stuff! My mobile is a nice place to sit on a hot rainy day while the kids play soccer or horse shows too!

>international treaty to that effect. In order to do away with it completely
>they would either have to go back and redo the treaty (not likely) or break
>it. (more likely, ask a Native American).

Well, in the first place, the USA is not following the spirit of the treaty,
since it requires demonstrated proficiency sending as well as receiving.

In the second place, the ITU, the body responsible for the treaty you're
talking about, *does* revise things from time to time. Sometime in the
last few years, they sent around a note asking the member countries if
it seemed necessary to continue testing for Morse code proficiency
in the amateur service, since all other services had already abandoned
Morse. So the ITU is suggesting that perhaps the requirement is no
longer relevant. The national amateur radio bodies of Canada and the UK,
as well as a number of other countries, have said that they agree.
Some people think that it's inevitable that the international requirement
will eventually disappear.

However, the ARRL in the USA opposes this change because most of their
members want Morse testing to continue to be required.

If you think the USA should be in the lead in changing the treaty, rather
than one of the countries trying to prevent change, you might try
changing the ARRL's mind (if you're in the USA).

2410. FS: Tranquil Ham QTH in Central NJ

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-27 00:00:00 UTC
From: "Joe Giacobello, K2XX" <k2xx@concentric.net>
Message-ID: <3726AF84.6E88C21E@concentric.net>
Source record: 109682

K2XX and K2XXX are selling their QTH in central (Green Brook) NJ and moving to the wilds of western Virginia. The QTH is located in the first ridge of the Watchung Hills, overlooking the Raritan Valley, with a line-of-sight view into Manhattan (25 miles away as the crow flies), Long Island and thence Europe and Africa. The view to the west isn't bad either, but the Rockies get in the way. Green Brook borders Plainfield, Watchung, Warren, Middlesex, Dunellen and North Plainfield, NJ.

The QTH includes a 72 ft. motorized Triex crank-up, tilt-over tower with a six band quad on top: four elements on 10, 12, 15, 17 and 20 and seven elements on six meters, all on a 24 ft. boom. There is also a Wilson TT-45 forty-five foot crank-up (manual), tilt-over tower with a 13 element two meter Yagi, a 24 element 432 MHZ Yagi and a Diamond vertical collinear for two meters. Attached to the chimney are circularly polarized Yagis for Oscar (144/435 MHZ) with azimuthal and elevation rotors. Finally, there is a 102 ft. long center fed Zepp that I use for 30, 40 and 80 meters. This whole package comes along with trained neighbors. I know it's hard to believe, but they actually help me put up and maintain my antennas. I have consistently run 1.5 KW at this QTH for more than 19 years with practically no RFI. What little there has been over all those years, has been easily and amicably resolved. My relationship with my neighbors is excellent.

As if all of the foregoing were not enough, there is also a comfortable, cozy home, a wonderful neighborhood, convenience to shopping and transportation, excellent schools and immediately adjoining neighborhoods where the home values range between $500,000 and $1,000,000.

The house was originally built in the late 30's but has been renovated several times. We made a major renovation in 1987 and followed up with a new kitchen about five years ago. There are three bedrooms, one of which we use as a shack. The accompanying walk-in closet is used as a workshop. All of the bedrooms have walk-in closets. There is a modern kitchen, an office, a living room with stone fireplace, a sun/dining room, a screened front porch, a large front patio, and a large rear deck. There is an oversized, detached, two car garage with a large workbench and additional storage. While the official lot size seems small (75X100'), its effective size is much larger because the adjacent streets do not use up all of their allowed right-of-way. The lot and its surroundings are shielded by an abundance of mature deciduous trees. The property tax is about
$3400 annually.

Rail transportation to Manhattan is five minutes (three miles) away at Dunellen. The trip to Penn Station is about 55 minutes. Route 22 is only two minutes away and I-78 (Exits 36 or 40) is about eight minutes away. I-287 is only 10 minutes away.

High school students from Green Brook Township attend Watchung Hills Regional High School, a highly considered public institution noted for its academic and athletic excellence.

If you have any interest in owning this QTH, please contact Joe at 908-756-3825 or via e-mail. If there is no interest from hamdom by June 1, we intend to offer it, though somewhat sadly, to the general public at that time. The price is firm at $255,000.

73, Joe
K2XX

I believe the International telecommunications Union, the international treaty that authorizes the Amateur Radio SERVICE, requires Morse Code for amateur licenses.

We have been playing with the definitions of how much morse has to be known, copied, skill level, etc. but I believe international law still requires it.

Shame you mentioned a pickup, otherwise I would of suggested the best
kept secret know as a Suburban with their turbo diesel.

I'm sure the pickup version will work as well.

I've recently bought a good used one and am having it shipped back here
to the UK. Nice large chassis for the other half of the dipole as I like
the low bands of HF and a steel roof for antennas.

Ditto with a TS-50. That supply is not adequate for most 100 watt rigs.

I have not problems using the normal hand mic. I purchased a Heil boom headset and the required pre-amp for use with an IC-706. I get no audio at all from the boom mic. I ohmed everything out, got a replacement amp from Heil. I have no clue what the problem could be. Maybe I will check the 8v from the mic cord today.

Any ideas?

Thanks,

Willie

Source record: 109737

Hi Guys,

There are those (including the league) who say that code is old fashioned and out-dated. In difficult band conditions there are four modes that won't make it - AM, FM, USB, LSB. CW will make it a go when the others won't. In 1999 everyone seems to be a spin artist, CW is as effective as ever, and entirely valid as a tested element on amateur exams.

Are you sure 115 MHz is the frequency you want? 118-136 MHz is allocated
to aircraft communications worldwide, and that uses AM, not FM.

Morse Code has its uses and should be encouraged, but not worry too much about those who don't know the code. I think the opportunity to pump signals out on a narrow band to distant parts of the world has its own charms.

The US Marines still use Morse code, and a few of us keep our keys handy just in case.

I dont mean we shouldnt learn it for fun! I know it and enjoy sending it.
I mean why is it a testing requirement if no one uses it anymore, thus its
not necessary for emergency communication.

They have to keep the testing requirements because years ago they signed an international treaty to that effect. In order to do away with it completely they would either have to go back and redo the treaty (not likely) or break it. (more likely, ask a Native American).

Source record: 109772

With your requirements, you must immediately rule out the Ken TMV7A. It is an absolute intermod sponge. I have moderate to heavy pager and dispatcher trouble in my area and the Ken is loaded with them throughout the 2 meter band and 440 is about as bad. Couple this with a painfully slow scan rate (4 channels per sec) and you have poor 1960's technology. Their method of overcoming this is to desense, and it does work somewhat but you now have about 4 or 5 "S" units less on all signals. Then there is the faceplate that cannot be seen on even a bright day, let alone sunny. The 8100 probably fills your bill the best. Best intermod protection. I get a dispatcher on one freq. only and nothing stops this. Decent out of band sens but don't go too far out because it does diminish somewhat unless you get an antenna for that freq. Easiest dial of all to read in bright environment but it could be larger. Equally good at different angles too. 26 channels per sec scan rate is great and fastest of all by far. Early models had an overheating problem but this seems to have been cured with mods and production changes in later units. Now the ICOM. Good intermod protection to start with and squelch control is also attenuator. It is continuously variable and so much better than Kenwoods fixed attenuation and it is easy to tune it in and out. I only need it on a couple of freqs. Scan rate is 8 channels per sec so its not the best but not as pokey as a Kenwood. I'd say its a close second to the FT8100 and some of the other features may lead you to it, like more autodials, I think. It's out of band reception is good.

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost).
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

Howdy Dan....In all the hoopola about whether anyone should or can't use morse anymore.....a few points never seem to be brought out...or are only mentioned briefly.

Morse - Is a mode that allows communications to be copied verbatim easily (you can come close on voice or often do it if words are standardized but its not easy)......
- Is a mode that is indeed digital but which requires the most rudimentary interfacing and for which our own "processor" causes error correcting and speed compensating depending on the ability of the other "terminal" or "line" conditions.
- Is a mode which transcends language and dialect barriers when suitable signals are used...such as the international "Q" signals...and others. Hard to get most computer systems to do that yet and our ability to merely speak one language (english for example) with a wide variation of accents is hard enough sometimes.
- Is a mode whose "standardization" is unheard of in communications, where for at least a hundred years was not obsolete for the purpose of basic communications (stuff that's GOOD for critical use...such as lifesaving...and cheap commerce).
- Is a mode which, when the equipment is tired....just needs a good dinner and a cup o coffee to revive it.....stuff we have around anyway !
- When send using CW transmission (the 2 are NOT the same!) is extremely effective, using suitable narrow filters at both ends, for solid communications under the worst circuit noise and conditions. It might not be the very best...but when you consider the rudimentary equipment needed it becomes mighty attractive.
- Is a mode which, because it only requires very basic equipment, lends itself well to "field repairability".....a handy thing if you've ever sat in a remote spot and listened to digital signals that couldn't connect to you...telling yourself...."if they'd only just turn 'em on and off...I could get the message! After all...what is slower....a slow sent message or one that never arrives????

There's likely lots of other good and bad reasons why anyone should keep morse alive. Yep its old.....but well made and the fact that it hasn't undergone a million transformations tells us all that it works well. It is slow, but when mere text will suffice, is an adequate method of communication in conjuction with simple equipment. It does require skill to use...but everything we do also does (Tell me that a windows NT system hung up on a satellite link doesn't require skill to figure out what happened!). There is also a thing about operating morse that only

morse operators may truely feel...but its a kindred spirit that transcends whether you were a mere ham or a skilled commercial operator, a struggling boy scout trying it or a pilot who was able to make himself understood when his mic stopped working. To that last end I can only offer that to those who WON'T use it...it will always be a thing despised....to those who do or have, a thing revered.

I'm not getting into the "code debate" but I am learning the code. At present it's required for all the license classes in which I'm interested: General, Advanced, Extra.

Aside from that, code is another method of communication just like American Sign Language or Braille.

Personally, I want to learn Morse code.

This is true, and from what I have gathered by reading the updates in CQ, they only have to have a 5wpm code requirement to adhere to the treaty. This is some of the basis for the new license structure. I am learning code so that I can at least get my Tech+, and am shooting for General.

Source record: 109810

Hello All,

Suspect this will start some discussion--(hope)

I am going to be purchasing a dual band radio, possibly at Dayton, and would appreciate any pro / con comments on the Icom IC-2710H vs Kenwood TMV7A vs Yaesu FT-8100.

My requirements are:

That the radio has a decent front end and can handle strong commercial signals (I live near a large metro area) on both bands, especially 2M.

The sensitivity in the 156-162 MHz area must be very good to copy weak signals in the Marine and Railroad allocations. Also 450-460 MHz.

As the use will be mobile, the display must be as readable as possible in all lighting conditions.

Each of the rigs apparently have dual simul receive, remote mount front panel capability, multiple scan options, dual speaker outputs, and cross band repeat, so the assumption is that they're equal there. The comparrisons in Nov. 98 QST did not include the Icom 2710H. In that piece, the Yaesu did not do well in out of band receive sensitivity, which is a real negitive for me.

Any thoughts would be appreciated.

Dave

2476. SALE: 433 MHz. 9600 Baud Packet Station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-27 00:00:00 UTC

I have the following equipment for sale:

Motorola Maxar 80 UHF radio
MFJ 1270B TNC
Paccom 9600 baud modem installed

The radio is crystalled and tuned for 433.15 MHz, and puts out
approximately 15 watts. The equipment was taken out of service
working, a part of the network here in northern CA.

Power cables for the radio and TNC are included. A manual for the TNC
is also included.

I am asking $150, but I am open to other offers.

Thanks for reading this message, and please send me an email if you're
interested.

Yes. I am very impressed with the radio as a whole. I admit that breakthrough on 10m is not good and Yaesu are investigating this at present. The breakthrough is very weak and does not impede general operation of the band but I would like it sorted.

I have been away from the radio for some time and I suppose the latest receivers should be better than my old TS430 but I have never been able to pull out such distant signals before. I am also very happy with reports of 'superb audio' and the distances I am achieving on 2m / 70cm considering the mobile antenna sitting on a drain cover.

>There is a store in my area called R&L Electronics. Same story there about
>the restocking fee. Their trade in price on a 2 week old Alinco DJ-5T was
>unbelievable! $110.00 for a radio that was "as new" in the original box.

Questions:
1) Would _you_ pay "new" price for that unit if somebody *else* had
bought it, used it for 2 weeks, and returned it?
2) Would you feel 'ripped off' if it was represented as 'new', and then
you found out it was 'pre-owned"?

Notes:
a) the 'overhead cost' to a store of taking back a 'used' (even *minimaly*
so) unit is =significantly= greater than what is involved in a 'new'
unit. "Somebody" has to unpack it, verify that "everything's there",
and that 'it all works, and works -right-', and then package it up again.
this takes a non-trivial amount of time and knowledge. these things

cost money.
b) selling an item costs money. regardless of whether it's new or used. while it's 'sitting in inventory', it's occupying space, that the store pays rent on. Then there's the salesman's time answering any questions. etc.
c) Yes, the seller 'made a profit' on the original sale. *BUT* now he has to sell it _again_. And has a *second* set of 'overhead' costs associated with the item.
d) _if_ he could/would re-sell the item as "new", the absolute most he could give you for it, *without*losing*money* on the deal is the 'whole-sale cost'.
e) as a 'general case', an item loses 25-30% of its value when it is sold the first time. There are exceptions for particularly desirable objects, but, in broad, thats the figure. Multiple reasons -- doesn't have the 'prestige value'/'snob appeal' of "new"; _warranty_ may not transfer, etc., etc. ad nauseum.
f) this all means, for example, that something that sells for $200 'new', has a 'retail' selling value of about $150 when in 'used, but like-new' condition. That's what the store can expect to *sell* it for, after they take it back as a 'trade in'. They have to 'buy' it, in trade-in value for *less*, so they have a 'margin' to cover the overhead costs and make a profit on it.
g) if they -don't- "make a profit" on the trade-in (*NOT* counting the original sale), there is, in general, very little incentive to "do" the trade-in. They may lose a sale 'now' on the more-expensive piece, but it _will_ sell later. The 'cost' to the store of *not* doing the deal involving the trade-in is the 'carrying cost' of having the higher priced item in inventory for a longer period, _less_ whatever they would have 'lost' on re-selling the traded-in item.
h) That cost is relatively *small*. assume the store leases space for $36/sq.ft./year. Assume this unit occupies (or prevents anything else from occupying) one sq ft of space (that's floor-to-ceiling :) Assume that the item will take an extra one month to sell. oh, wow. There's a whole THREE DOLLARS worth of negotiating room.

Real-world data:
I do a -lot- of business with a store that sells new and used personal computer systems. both buying from them, and selling to them. used machines, all else being equal (i.e. 'like new' condition) sell for 75-80% of the price for 'new' machines. They _buy_ used systems at approx 60% of anticipated selling price. Thus 'buy' value of a 'used, like new' system is thus appros 48% of 'new' price. even if only 'a couple of weeks old'.

Hello all!
Have the following items for sale:
1-Tektronix 7A19 - $20.00
1-Tektronix 7D01/DF1 (no probes) - $45.00
1-Tektronix - 4952 - joystick - $10.00
1-Tektronix - P6056/6059 - probe new in factory pack - $15.00
2-TIF model VA105 volume air balancer - both for $20.00
1-Genrad 1269A power supply 300vdc50ma/6.3vac3amps- $10.00
1-General Microwave model N-422-A Power head 1-12ghz
3-Systec model TM107A - temp meter - $10.00each
1-Data I/O model 29A with Unipak 2 - $40.00
1-Data I/O Chipsite- $15.00
1-Elgar model 251 with 400B oscillator - $75.00
1-Macbeth model TD504 Densitometer - Digital - works - $50.00
1-HP 608D Sig. gen. - 10-420mhz - works good tested on all ranges and physically in good condition- $95.00
1-HP 8403A modulator - $25.00
1-HP1630D with pod's 2-10272A, 2-10271A no grabbers but have connectors to make your own. Unit does not self test but in good physical condition and powers up fine. - $70.00
1-HP 1600A Logic state analyzer with (2)-10231C & grabbers, (1)-10230C with grabbers - tests OK - $50.00
1-HP1600A with (2)-10231C and (2)-10230C both with grabbers - $60.00 tests ok.
1-HP428B - NO probe - good condition/new style - $30.00
6-RF Industries UNIDAPT cable assembly kit with rack holder - NEW! - factory packed - $10.00each.
1-HP 1607A Logic State Analyzer - with (1)- 10231C and (1)-10230C both with grabbers- $45.00
1-HP10248C 8 bit probe with grabbers and case - $10.00

Considering the comments on velocity factor, you willl want to measure the
resonant frequencyt of the notch with some type of equipment. The stubs
I've built had to be tuned to frequency.

If you need higher notch-Q (at the expense of slightly less notch depth) you
can use a longer stub (i.e.: 3/4 wavelength, 5/4 wavelength - don't forget the

Vf adjustment).

Another approach to improving the notch filter is to use multiple notch
filters
separated by a 1/4 wave transmission line.

```
<--1/4-->
In ------+--------+------- Out
| |
| |
stub stub
```

I've used this techniques to knock down a paging transitter signal located
very, very close (a few feet away). Tuning of the stubs was necessary. Start

with them long, and snip off 1/2" pieces to bring them into resonance. For
longer stubs, RG-213 gives better notch depth than RG-58 (due to lower loss).

Tom, N5EG

I've been told my price for this camera is too high.. Here is a reduced
price.
HP Photosmart C20 Digital Camera currently listed at Egghead.com for
$299.99

I'm asking $250+actual shipping. This camera is unused/brand new with
the
full warranty......

It is a great camera for taking pics of your creativities to share on a
website.

Please look at the description below.

I can't seem to copy the entire URL, so for full info:

Please go to www.egghead.com
Then click on "SURPLUS" and "Digital Imaging/Scanners"
Finally click on "Digital Cameras"
You will see the "HP Photosmart C20" listed
Click on that title and you will see the description

Source record: 109587
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap

I'm about to buy one of these high end receivers and
don't want to make a mistake. Please help me to
avoid being disappointed. Both receivers are used,
but appear to be in good condition. I'm not able to
see either of them, as they are being sold on-line.

The Racal 6790GM is surplus, but appears to be in
good shape with five original crystal filters: .4, 1.6,
3.2, 6.8 and 18 KHz.

The Watkins Johnson HF1000 Is in mint condition,
with all the original equipment. (box, manuals, etc.)

If you have experience with either (or both) of these fine
receivers, Please reply here. Thanks ever so much.

Yeah well the appealing thing about the 220MHz range is that there is a decent amount of activity on it. I live in Southern California. I like the 1 1/4 meter due to the fact that the people I hear on it are very friendly. The 2m freqs here a re a bit crowded and there is even a few freqs where the guys just cuss and yell at each other at any hour of the day. That is a huge turn off to 2m. Oh well. I like 220MHZ from what I hear. the people are super nice and there is alots of room. Thanks for your input 73'....KF6VVQ,,,,joseph

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap,rec.radio.shortwave

I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $2000 (original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost). Have original 736 box and packing for
shipment!!!
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

Can anyone help with the wiring for a Collins VHF-251 air-band radio please?

The radio is at least 10 years old and I cannot find any documentation.

It has a 25-pin male plug on the back (looks just like a computer serial plug)
and I would like to know how to connect it up.

Thanks very much,
Bill.

>find about 5-7W in an HT. Any suggetions from anyone would be appreciative.

I recomend that you buy the mobile rig. You can get (or make) a slide mount
for it with connections for power and antenna done with slip connectors. So
you just pull it out of the mount in the car and push it into the mount in your
room without messing with cables. You'll need a 12 volt power supply in your
room, plus a fixed antenna for your house, and a mobile antenna for the car.
This will work out great, will cost less than a HT and a pair of amplifiers, and
it'll work better too.

HTs don't make good mobile or base rigs. Not only are they underpowered,
but more importantly they don't have enough audio to hear over road noise,
and their front ends have so much gain and so little selectivity that they are
intermod magnets when connected to an external antenna. Mobile rigs
generally are designed to work with external antennas, so they have better
filtering and use larger standing currents in the front end to avoid IMD. They
also have adequate audio to be heard in a noisy car. And of course they
run substantially more power, which will keep your from always being the
scratchie signal guy no one wants to listen to on the repeaters.

The only thing you don't get is foot mobile capability. Unless you plan to
operate a lot on foot, that won't be missed. The best way to add foot
mobile capability is to add one of the micro-HTs and use the rig in your
car as a crossband repeater to extend your range to something worthwhile.
So consider a dualband mobile radio with crossband repeat capabilities
to allow you to do this later. (This is the setup I run, a FT8500 in the car,
and a VX-1R for walking around the mall or hamfest.)

From: mf_luder@my-dejanews.com
Message-ID: <7g7i18har1@nnrp1.dejanews.com>
Source record: 109634
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy

Does it work on close-talking hams at flea markets ?

The perfect H-T for Field Day? Just when you thought modern
H-Ts had included just about every feature conceivable, along comes
Alinco with its new DJ-195T that includes--get this--an experimental
"mosquito repel" feature. Alinco USA Branch Manager Katsumi Nakata,
KE6RD, says the unit emits an electronic tone to keep the annoying
insects away from the vicinity of the radio. "It's a feature we added just
for fun," Nakata said. "The mosquito repel feature could make the
DJ-195T the first radio capable of de-bugging a Field Day operating
position," he added with a smile. (Hmmm. Was that announcement dated
April 1?) Other unusual DJ-195T features include a theft alarm that can be
set to sound when the unit is removed from an external power source,
such as in a vehicle. Alinco Sales Manager Doug Wynn, KB6YZD, said
the new features reflect input gathered directly from hams. The company
also has just announced its new DJ-V5T dualband compact, 5-W H-T.

Source record: 109638
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,sci.electronics.repair

I have a Kenwood TS-140 HF rig that has a wierd problem.
When I got the rig, TX audio was garbled on all bands.
I found and repaired the bias circuit for the finals.

Now when I try and transmit on 20 meters, the power is
fine for the first 2 or 3 sylables, then drops off to
about 10 to 15 watts. As I was trying to fine the problem,
I noticed that if I remove the PA section from the main
rig far enough that the chassis don't touch, the problem
goes away and TX on all bands is fine?

Does anyone have a clue what could be happening?

Hello
I wonder if anyone can have a copy of this manual made and sent to me.
(Icom charges 28$ for it)
I'll cover costs ofcourse.
Thanks in advance

Why would that be? Amateurs still use it .What do the marines have to do
with it? MK

> Rick
> AH6HZ
You really don't want to use a bus. The best way is to have a ground bulkhead at the entrance and then tie the pieces of gear to the bulkhead with an individual ground cable for each piece. In a star configuration. If you use a bus , you are daisy chaining together. Myself, I don't use a ground except for the safety ground supplied by the power to my amp. I use NO ground cables from the bulkhead to the gear. There is really no need for one in most cases. In my case the bulkhead is ground for lightning protection ONLY. MK

Myself, I would use a secondary outboard relay. I hate using the little radio relays to key amps. The ALC should work ok I would think. But I never use ALC. It's really a waste of time I think. By the time you overdrive to the point where the ALC circuit kicks in , it's already too late. I'd just run it without the ALC, and control the power from the rig to avoid overdriving. You should have an RF power level control. I'd use it , and forget the ALC. On my amp, I use a foot switch. That way I can use any exciter without a load of grief changing cables around. MK

2544. FS: Tentec Delta-580 QRP<100W + WARC

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-28 00:00:00 UTC
From: bcotter@pop.uky.edu
Message-ID: <7g7jl6$c3t$1@news.uky.edu>
Source record: 109647

*****

For Sale:

An exceptionally well cared for Delta-580 in excellent condition used for vacations, field-day and portable operation. The cabinet paint and front panel are scratch-free and like new, with all panel lettering clear and smudge-free. There is a minor rub on top of the plastic faceplate which is barely visible. This light weight, compact 100W SSB/CW transceiver operates on all nine bands and includes a noise blanker that really works. The legendary QSK, pure sidetone and AF BP/notch filters make the Delta a pleasure to operate on CW. Variable power and ALC controls allow QRP to 100W operation. Includes the original manual and TenTec service history. $475 plus shipping.

Thanks,

73 Bill N4ALG
bcotter@pop.uky.edu

A sample Delta-580 is on the Unofficial TenTec page:

Source record: 109648

115 MHz? The middle of the aviation navigation band? VOR! If its a receiver you want, just about any modern scanner covers those 2 bands (88-108 wideband FM and 108.0 135.995 AM) On the other hand, if its a transmitter you want... well.....

Shahid Ahmed wrote:

Hi Joseph,

You may have already done this but if not check for local activity on
220Mhz. In some areas like mine there is absolutely no activity on 220.
It would be a shame for a newly licensed ham to do it the *right* way
by building his rig and then not be able to make contacts! If there is
activity on 220 or you decide to go with some other band I have heard
good things about Ten Tec kits although I have not built one.

Have fun es 73

My second hand info stands corrected, although who really cares ? So from your words it's regrettable that Kenwood and ARRL use Imlay, but you were so unphased by the notion that Yaesu and ARRL did, that you rushed a retort out ?

Another perfect contester who thinks he runs the spectrum and the internet.

While you're at it, why don't you address the quality control problems there and never mind quality control and spin of USENET posts ?

I have owned Yaesu rigs in the 70's and 80's. Yaesu DOES have some innovative designs- the 847 concept is long overdue. They just need more work on quality control these days.

The VX-5R use the new type of Lithium ion battery, it worth the money to change. Plus the accessoris/charger is pretty cheap. I think it is smart to buy a VX-5R instead of FT-50.

"I will not buy a 486 computer because I can swap a lot of accessories from my old 386, AT bus cards...etc, go buy a pentium II at least and move forward."

I need help for YAESU FT51R.

I have done the jumper 6,7 mod and the result was extended TX/RX, but suddenly the rig blocked the TX on factory default. (144.000-146.000 and 430.000-440.000)

How to modify it once again??

I have ADMS !C software but I can't restore it.

Any info about it??

Thanx for answer.

F12 HY-GAIN MOSLEY MONO-BANDERS

Does anybody have experience with any of these antennas? Which company makes the strongest mechanical design? Thank you.

73, Andrey VE4QQ.

I am considering an open circuit coaxial notch filter for Mode-J (FO-20/FO-29 satellite) interference rejection. Reason I am considering an open circuit is to permit DC continuity (for preamplifier).I would use RG213 double shielded equivalent cable.

What 1/4 wave multiple would be best to trap third harmonic of 145.950 uplink without degrading loss or match at 2 meters??

> Morse - Is a mode that allows communications to be copied verbatim
> easily (you can come close on voice or often do it if words are
> standardized but its not easy)......

It is much easier to copy something from English to English, It is much harder to copy something from a code back to English and thus more chance for error.

> - Is a mode that is indeed digital but which requires the
> most rudimentary interfacing and for which our own "processor" causes
> error correcting and speed compensating depending on the ability of the
> other "terminal" or "line" conditions.

Speech is compatible to 99% of the population's "processor", morse code only to a much smaller percent.

> - Is a mode which transcends language and dialect barriers
> when suitable signals are used...

What?! Neither my English or other foreign language speaking friends can understand morse code. This is a ridiculous statement.

> and our ability to merely speak one language (english for example) with
> a wide variation of accents is hard enough sometimes.

Yes, accents are hard enough, why make it MORE difficult?! If people can't understand a store check-out clerk in some weird accent, how many customers are going to understand him if he emits beeping noises from his mouth?

> - Is a mode whose "standardization" is unheard of in
> communications, where for at least a hundred years was not obsolete for
> the purpose of basic communications (stuff that's GOOD for critical
> use...such as lifesaving...and cheap commerce).

Yeah, that's why Police, Fire and Ambulance don't use it.

> is extremely effective, using suitable narrow filters at both ends, for
> solid communications under the worst circuit noise and conditions.
Completely worthless if the person on the other end doesn't understand code! (which is about 99% of the population)

> - Is a mode which, because it only requires very basic
> equipment, lends itself well to "field repairability"

A washboard is easier to repair than a washing machine too, but not a good reason to mandate people learning to use it before they are allowed to buy a washing machine.

.....a handy thing
> if you've ever sat in a remote spot and listened to digital signals that
> couldn't connect to you...telling yourself...."if they'd only just turn
> 'em on and off...I could get the message! After all...what is
> slower....a slow sent message or one that never arrives????

If no one on the other end understands code, it will never arrive.

Why don't advertisers make all their commercials on radio and TV in morse code so the message could reach more of an audience in bad conditions? Because MORE people would get the message EVEN IN BAD CONDITIONS if it is in voice, than in a secret code that they don't understand.

> There's likely lots of other good and bad reasons why anyone should keep
> morse alive.

There is only ONE. Because it is nostalgic and fun for many people. Don't take the fun away by forcing it on people that don't want to use it.

I bet if morse code was not a requirement (for certain classes of license) more people might take it up. No one wants to learn something that is forced opon them. People choose hobbies because they have an interest in them, not because someone hands them a fishing pole and orders them to fish!

> understood when his mic stopped working.

You people with your mic stopped working BS. Or stranded at the north pole with nothing for miles but a payphone with a broken microphone. Always have to try and make up some unrealistic situation to show how morse code could actually be usefull, and then THAT doesn't even fly!

I don't know of anyone ever going to be in the above situation, but even IF... would the operator on the phone or the police understand the code you are punching in on the touch tone pad, or would they think it is a prank call and hang up? Doesn't really matter, as this situation will never occur to either of us. They don't have payphones in the middle of the north pole. Especially with non-working microphones and working touch tone pads.

To that last end I can only
> offer that to those who WON'T use it...it will always be a thing
> despised....to those who do or have, a thing revered.

Think about what you just said! Think about WHY it would EVER be DESPISED! NO ONE would ever depise it if it wasn't shoved down anyones's throat!

People don't DESPISE model airplane kits. They might if people were
FORCED to build them in order to take up some other hobby!

To YOU and many others it is fun, to others it is boring and slow.

To some people restoring old cars is fun, to others it is boring and slow.

At least car restorer's don't want that hobby to be a requirement in order to enjoy some other hobby.

Tedd,
Substitute a dummy load and see if it does the same thing. If tx into a dummy load is OK, you have an RF feedback problem. Try creating a balun by coiling up your coax (10 turns around a 6" form) at the rear of the rig. Also, try beefing up your entire station's ground system. Oh, and try substituting a different mic. These steps should narrow it down.

Source record: 109675

Can anyone who has or had experience with these models give me any pros or cons as to the better one? They both came out at the same time...and I think the W2A has more memories. The W2A is a tad bit more costly...but worth it?

I had a spec sheet that told the differences between the two...but can't seem to find it. I owned a 24AT when they first came out...and was happy with it (except for the pastic LCD cover falling off on occasion).

I know they both can be modified for out-of-band transmit and receive.

Which one is the better?

Thanks for your opinions!!

A local non-ham has some Mackay Radio (NOS) transmitters for sale:

1.) Mackay 2020 HF CW transmitter, 2-24 Mhz., 500 watts output. Uses all tubes in the RF deck and has a companion synthesized solid state exciter unit that tunes in 100 Hz. steps. Will match a wide variety of antennas. In a 6' rack, but less 400v. and 2000 volt power supplies.

2.)Mackay 2012 MF CW transmitter, 400-515 Khz, 500 watts output. Same tube lineup as above. Less same common power supply as above.

3.) Mackay 2017 MF CW transmitter, all solid state, 40 watts output, requires 12 volt DC supply. With crystals for 410, 425, 454, 468 and 500 Khz.

I can send JPEG pictures of gear to interested parties. Reasonable bids/offers being accepted.

73,
Sandy W5TVW

ALL the below are VERY CORRECT and TRUE, BUT,
is that ANY reason to use it on a TEST for getting your ticket
keep the subbands..if you want, EXPAND them if you like
IF we use this MODE to test people should we not have a test to see if you
can talk correctly for phone, type correctly for packet,
and expand that by building your own computer for digital modes.
THAT'S ALL I AM AGAINST IS FOR A TEST
keep the mode if it makes you happy but don't use it for TESTING.

My boss owns an FT-100 and is very disappointed with how easily its
receiver overloads (generates fake signals when subjected to strong
ones.) I think this is what's happening in your transceiver: Signals
on lower-frequency broadcast bands (in the vicinity of 6, 9.5, 11.7,
15 MHz, and other places) are mixing together and making
higher-frequency junk. Because 10 m is so relatively quiet, the
spurious signals are particularly noticeable up there.

From: appleman1856@my-dejanews.com
Message-ID: <7g5o76uec1@nnrp1.dejanews.com>
Source record: 109691

Is there anyone who's had trouble with an ICOM IC-RP4020 UHF Repeater, specifically when the unit is in repeat mode it just cuts out after a few minutes of use. A few minutes later, the unit begins operating again only to repeat the same thing over again. I've already changed IC2 (SC-1111) in the PA unit and that worked for a while. At this point I'm not sure if the problem is with the PA and/or the logic unit instructing the TX unit or PA to shut down.

Just curious to see if anyone has experienced or heard of anything like this, and if so any suggestions.

Thanks,

RepeaterGuy

The assertion that no one uses it anymore is false.

CW will get through poor conditions when no other mode will. No high
tech equipment is necessary to generate or detect a CW signal. That is
as long as there are skilled operators. So CW can be used in
emergencies when say for instance computors crash, or a partially
disabled phone rig can't send intellegible audio.

Here, here!

I've been trying to explain to wife/family/friends for over 30 years, and haven't ever come up with a "reason" for using CW that satisfies those that don't have the experience. To those who have conquered their demons, learned to communicate via CW, and discovered the reward of it, no explanation is necessary.

If the code requirement is dropped (as it may well be), the incentives that lead one past the hurdles of learning the code, to the most rewarding experiences offered by CW, will be removed, and perhaps the ranks of CW ops will diminish. Some will be happy if this should be the case.

I think it's interesting to observe, that since the proliferation of digital modes in the last ten years or so, CW activity on the ham bands seems to have grown, not diminished, both here in the States and internationally. Considering that many countries don't have a code requirement anymore, I wonder why that would be, if it truly is a dead mode?

Saying CW is dead is kind of like saying pianos are useless because PCs with sound cards can make more sounds, and never need tuning. Those who play or listen to fine pianos can instantly perceive the difference, and those whose minds are made up won't be listening for pianos in the first place.

When I got started 33 years ago, I struggled for a year to get my code speed to 13 WPM so I could get my "general" ticket and move on to fone and rtty operation. But 99% of my operation since then has been CW. Go figure, huh?

73,
monty N5FC

Here is a great web site about TM-V7A remote control.

http://www.access1.net/kc7kc/tmv7armt.htm

KC7KC did a great job and should be commended.

Thank you very much for your comments on the Dual Banders.

The info on the Kenwood was especially insightful and helpful in eliminating it from the group.

Per the Nov. 98 QST tests, the FT-8100 looses sensitivity quickly outside the ham bands and that is important to me. As I mentioned, 156-162 MHz in particular.

I've had an Icom IC-228H for many years and have generally had pretty good results with it, which may push me a little closer to the IC2710H this time.

Thanks again.

I started with a HT. It was a pain taking it out of the truck so much but was easier than doing that with a mobile. It is also hard on the connections and the "water plugs" that cover the power and hand mic connections on the HT. I have since upgraded to a mobile.

Hi to all.

I've just read on another list that the Kenwood TM732
can be modified to improve the UHF RX intermodulations
(it seems that Kenwood does it).

Does anyone out there know if this mod is described somewhere
in the web?

I just found mods for RX and TX band spreading.

Thanks to all.

Yeah, but. . .what other communications methods are achieved via CW? You are correct, strictly speaking, CW * Morse code. The misnomer is as old as the vacuum tube, though the FCC can be forgiven a bit of idiom and tradition, can't it?

Howdy Cecil.....Interesting point - often confused.....CW, MCW etc are modes of operation for a signal source.....morse is a mode (method) of communicating information, like voice etc. I know you know the difference of course....what I see is when green hams (we were all one eh!) start to confuse all this not understanding that you can send morse over an FM circuit by keying a tone or by calling that CW. Then they're scratching their heads the first time we show 'em a signal generator heheh.
I think we all ought to make our "tech" talk a little more accurate by times...maybe.

Well, sorry that the fonts messed up the drawing. It's
pretty easy to tune the series section. Use 'T' connectors
for connecitng the stubs, the input line, the output line,
and the series 1/4 wve section.

Build the 1/4 wave series section by soldering a connector on
one end only, then temporarily configure it as a stub in a simple
test setup. Then tune it for a notch on the desired frequency
by snipping off little bits of the non-connectorized end. Snip off
just a little bit more to compensate for the connector that you will
then be putting on the open end. Install the connector, and you
now have the series line section.

Perhaps FT-100 is just a mobile rig with tons of compromises necessary
because of its size and the number of features. When used mobile with a
high-Q mobile antenna that also works as a filter, broadcast stations
could be attenuated 10-20db and may no longer be a problem.

Cuts out is not much of a description. What happens ? does it quit
transmitting ? Does the power shut off ? does the receiver quit
receiving ?

Go to the site turn up the volume and listen to the incoming signal,
when the repeater goes into trouble does the receiver quit receiving a
signal ? The receiver audio is not blocked by the CTCSS decode so the
speaker should still operate.

When in trouble does the TX LED extinguish ?

When in trouble what power output do you have ?

When in trouble do you still hear the transmitter in a hand held at
the site ? The TX VCO runs constantly so if the PA went dead you would
still hear the repeater locally.

What controller are you using ? Has the timeout timer gone into
trouble and is shutting down the repeater ?

Eden,

Welcome to Ham Radio. I use a hand held to do all of my comms. I use a 25 Watt amp at the base station with a "J-Pole" set up in the garage. It works nicely. Unless you are too far away from a local repeater, 2-5 watts should get you into a machine nicely.

Good luck and 73's

Hi Eden -- many beginners start with an HT, but later buy a mobile for
the reasons you stated. If you are doing a lot of outdoor communications
-- hiking, camping, public relations work, emergency communications --
an HT is ideal. Otherwise the new VHF mobiles which are going for
$200.00 or less are very desirable

Surely this depends on whether the calling party is paying for the call
or not. :)

Eden, welcome to ham radio and good luck! You may be pleasantly surprised with what you can do with 5-6 watts. Generally speaking, your antenna is much more important than your power output in achieving some consistent results with repeaters in your area (IMHO). Just my two cents.

73's, Randy, N1ZUO.

I'm just wondering how you can say the SWR meter is EXACTLY the same but black face, not white like the original?!?!?!?! Then ask yourself this.....can it REALLY be EXACTLY the same?

Good Morning, Mr. Steven S. Weber:

I suggest the following:

#1) Go back and read the original post. Did I say "SWR Meter", as you say, or did I say S-METER. In the event you didn't know, they are usually two different items.

2) Go back and read the original post again, dolt! I DID NOT say they were Identical.
I DID say however, that they were of identical SIZE. WHICH I STAND BEHIND!!!!

3) Ask yourself if there is something productive you could be doing, rather than picking your nose and picking apart IMAGINED discrepancies in other individual's posts.

4) Have a wonderful day, moron.

Don't they take up more space? If you're concerned about space, then
a FT100, IC706, or DX70 would probably take up less space.

Hi folks,
I have a Transworld RAT100 Automatic Antenna Tuner, complete with
the Technical Manual. While it was designed to work with Transworld
transceivers, it will work with just about any HF transceiver rated at
150w or less. Does anyone have any idea what the unit might be worth?
I'd like to sell it or swap it for something.

Thanks & 73,
Doug, KF4KL

2624. FS: Yaesu FT-736R w/6M & 1.2GHz ** PRICE REDUCED **

**** PRICE REDUCED ****
I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $1800 FIRM
(original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost). Have original 736 box and packing for
shipment!!! --- SHIPMENT COST INCLUDED!!!
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

I have changed my mind and I am now deciding to go with the 2meter kit from Ten Tec.
It is a few bucks cheaper as I am a student and every extra dollar is vital. I figure I will build the 2meter transceiver and then after that in the near future go ahead and build the 220MHZ kit. Thank you to everyone that has offered advice and help with this. I am grateful to you all.....73'

> Anybody have a detailed mars/cap mod for an Icom T8A? The only mods I've
> been able to find are the keyboard BAND-SQL-Power up extended receive mod,
> and a brief mention of a 'remove D54 to extend VHF & UHF' thing...
however,
> this radio doesn't have the configuraiton diodes labeled on the board as
far
> as I can see...

Here's the mods I have... but I still don't know where D54 (Out-of-band TX
for VHF & UHF) and D61 (out-of-band TX for 50mhz) are...

Anybody know where to look on the boards?

Thanks,

Jeffrey

ICOM IC-T8A MODS

* Expansion for receive
Push and hold BAND and SOL keys while turning POWER is on.

After Expansion, the following approximate
frequencies and Modes become available:
50 - 75.99 Mhz NBF
76 - 107.99 Mhz WFM
108 - 135.99 Mhz AM
136 - 174 Mhz NFM
174 - 229.99 Mhz FM
(222 doesn't receive well at all!)
300 - 399.99 Mhz AM
400 - 599.98 Mhz NFM
600 - 824 Mhz NFM
848 - 869 Mhz NFM
894 - 999.99 Mhz NFM

* Expansion for transmit:
- remove the battery and antenna
- remove the 2 black screws below the battery contacts
- remove the nut that holds the antenna jack in place
(snap ring pliers or hemostats work well)

Remove D54 on the LOGIC boards expand VHF and UHF bands
137-229 mhz high band
350-500 mhz uhf band
(where the heck is D54?)

Remove D61 on the LOGIC board to expand 50 MHz band
50-65 mhz low band
(where the heck is D61?)

I used the RS20 with a Kenwood TS140S for 5 years and never had a problem running 100 watts. I'm currently(no pun indended)using a Pyramid PS 25K, metered supply, with an Icom 728 and it runs around 18 amps on voice peaks and 100 w tune up. Pyramid metered supplies are a great alternative to the Astron and I believe the PS 25K costs around $109 if you shop around.

I also use a Pyramid PS and the only complaint I have had with it is that it
is very sensitve about RF. I solved the problem by adding capacitors across
the wires where the AC enters the unit.

>The assertion that no one uses it anymore is false.

True. There are some amateurs who still use it, a few third world militaries still use it, and a few third world ships still use it too, though they're supposed to have switched to GMDSS as of Jan 1, 1999 for emergency traffic if they're over 300 tons. Globe Wireless still maintains one Morse operator per shift to handle the remaining routine CW maritime traffic via Globe's network of remote controlled HF sites. But most of the traffic volume has moved to HF digital or to satellite. Globe uses Clover 2000 for its email and telex services on the HF maritime frequencies. They recently petitioned the ITU for another block of frequencies to handle the traffic volume they're seeing.

>CW will get through poor conditions when no other mode will.

That assertion is false. There are a number of digital techniques which work when the CW operator must give up. The classic example is Voyager. That's now nearly 30 years old, and completely outside the solar system. Its signals are so weak that even using the Deep Space Network you can't pick it out of the noise by ear. But it is still communicating at 10 bps (12 WPM equivalent) using QPSK and Reed-Solomon coding. (It was built without the benefit of microprocessor technology. We can do better today, and do it cheaply and easily.)

Amateurs use PACTOR II and Clover II as well as Coherent, PSK31, and a few other less widely known methods to communicate at low signal levels, or when fading and burst noise make the communications channel too difficult for manual OOK Morse. EME has been done with Oscar 10 class stations (100 watts, single yagi) using digital modulations and codes when the signal is totally undetectable by ear. (There is currently a project underway to characterize the EME channel so that codings and modulations can be tailored to it for even better performance.)

KA9Q has a WAV file recording on his website of a 400 bps (480 WPM) signal that's virtually undetectable by ear, but still perfectly copyable with simple off the shelf equipment and software (it is convolutionally coded BPSK). And as Shannon tells us (and Voyager confirms), slower signals can be weaker still.

Things like S/MT-Hell are very robust against auroral fading (true spread spectrum is even more so). The military has routinely been employing SS techniques for over a decade to get signals through hostile jamming. They use low rate coherent FSK to communicate with submerged nuclear subs. Etc. We've known how to soundly beat OOK Morse performance in a number of different ways for over 50 years. VLSI now lets us do it cheaply and easily, often for less than what some amateurs pay for a Morse key. But to do it we must have the knowledge to build and/or properly apply modem technology instead of attempting to manually emulate one.

Of course there's nothing *wrong* with wanting to use CW any more than there's something wrong with wanting to use AM voice. We don't all have to use techniques which get through when nothing else will. In fact, few of us do use such techniques exclusively. We choose what we want to use according to what each of us finds interesting or useful.

PSK31 operators don't demand that all other amateurs demonstrate a capability to use PSK31, Clover II operators don't demand that all other amateurs demonstrate a capability to use Clover II, S/MT-Hell operators don't demand that all other amateurs demonstrate a capability to use S/MT-Hell, etc. It is the height of arrogance for CW aficionados to demand that all amateurs demonstrate a capability to use Morse before being allowed access to frequencies used for other purposes. Yet there are many who do, and they often attempt to justify that demand with the false claim that OOK Morse gets through when nothing else will.

That isn't true, and it has been known not to be true for over half a century. But indulge me for a moment longer and assume that it is true. If so, then Shannon tells us that the slower our information rate, the lower the SNR we require to convey it correctly. So if we really want CW to get through when nothing else will, then we want amateurs to use it as slowly as possible. Therefore the higher amateur license grades should be required to demonstrate slower and slower Morse copying ability.

Say a Novice might be required to demonstrate 5 WPM, a General would be required to demonstrate 0.5 WPM, an Advanced 0.05 WPM, and an Extra would need to demonstrate the capability to copy 0.005 WPM. (If you don't think trying to copy that slow isn't hard to master, try it.)

In all cases the code should be buried in noise so that Eb/No is less than 4 db. Voyager works at that level, so certainly the mode that gets through when nothing else will should be able to do at least as well. (For those who don't get it, this is tongue in cheek. There's no way anyone can manually copy Morse text at 4 db Eb/No. They'd be exceedingly fortunate to even detect by ear that a signal is present.)

Ever compare it to a standard 1/2 wave?? I had a glass mount CB
antenna a long time ago-soured me on glass mounts ever since
with it's poor performance.

2660. FT-100 Specs.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-29 00:00:00 UTC
From: kb0haespam.stinks@arrl.net
Message-ID: <7ga0au$85m$1@odie.mcleod.net>
Source record: 109552

Hi Everyone. I would appreciate it if someone could send me the complete specs on the FT-100. I am interested in this rig, but Yaesu seems not to want to give out the specs on this rig. If someone has one of these rigs, please e-mail me the specs, as well as posting them here. I am sure others would be interested too.
Thanks

Yup, it does work better but I got a new car 2 years and opted for the glass
mount instead. Works fine for me, decent range for what I need.
Good point by the way.

73,
Tom

Message-ID: <bXwmJBmk#GA.265@news.galactica.it>
Source record: 109555

Hi folks!
In my shack I use an IC-765 and an IC-775DSP. Well, a few weeks ago, I changed my antennas from home-made quads to Force12 C4XL. The antenna is excellent but from that day I experienced new problems: the old 765 is perfect, but with my new digital 775 cw is becoming quite impossible due to tx that never stops, and other very strange phenomena are happening everyday. I think that new antenna gave me a new gift : RF!
Now, being a beginner in this matter, what kind of suggestion can you e-mail me to solve this problem?
Thanks for your help

Ken:
I would suggest that you at least consider a Harris RF-590, RF-590A, or the military version
R-2368. The Navy is in the process of converting the entire fleet to the R-2368. Check www.mindspring.com/~longwave/msg0997.htm and note the article by John Reed. He traded a Watkins
Johnson HF-1000 for a Harris RF-590 and an RF-550. He thinks the RF-590 is a better radio. You
can buy an RF-590 for less that what you see in QST and possibly slightly less than an HF-1000.
The Racal should be one-half to one-third the cost of the HF-1000 or an RF-590.

Looking to sell the above dualband radio. I recently installed a new keypad on it. Thr radio is in B to B+ condition. It comes with two Ni-MH battery packs which are 12V, 1300mA, 5W packs. Both have hardly been used (<5 times each pack). It also comes with the drop-in trickle charger. I would recommend getting a universal quick charger unless you want to wait 14 hours for each pack to recharge. They will probably be available at Dayton this year for under $50. I called an electronics shop in our area (R&L) and was quoted by them $125 for just the radio. I paid $50 each for the packs last year at Dayton from Mr. Nicad. I would sell each pack for $30. So, I would sell everything for $125 (radio)+$60 (2 battery packs)=$185. This price includes S/H and comes with a basic MFJ shoulder microphone. If interested or if you have any questions email me at hodgesmn@email.uc.edu

Nonsense. Morse is an encoding of the Roman alphabet. It has no words, grammar, or syntax to call its own. The words of some actual language (usually English) may be spelled out using the Morse alphabetic encoding, just as they might be spelled out using ASCII encoding or Baudot encoding, but the words remain words of the language from which they come. These words may be combined according to the syntax and gramatical rules of the language of which they are a part to form sentences, but the sentences remain sentences of the actual language, not sentences of some mythical Morse "language". What I'm sending here is text in the English language which just happens to be spelled using an ASCII encoding of the alphabet. Were I to send the text using Morse encodings of the alphabet, it would still be English language text.

Help!

We are planning to use a pair of Mitreks as a remote site for our 2 meter repeater. Looking for VHF and/or UHF Mitrek manuals. Motorola is out of print on these. Made in Canada, so part numbers don't match exactly the "T" prefix series units here in the US.

We listen on 2 meters (137-150MHz units) and link on UHF (2-10 watt UHF Mitrek).

Many thanks and 73,

Al ,NW2M

2675. FS: Motorola Radius M120 & Accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-29 00:00:00 UTC
From: nospam@mindspring.com
Message-ID: <372cf230.176843773@news.mindspring.com>
Source record: 109567

For Sale:

* Motorola Radius M120 mobile VHF transciever (40 watt),
crystals for 151.625 and 151.950 itenerant frequencies

* Motorola Spectrum Series base loaded mag mount mobile
antenna, P/N 4010A, 136-174 Mhz, 3db gain, spring loaded

* Motorola power supply and cable (for base operation of mobile
unit) P/N HPN4001B

* Motorola base statio tray (to hold mobile unit in place for base
station use) P/N HLN5292-R

The above equipment was purchased by a non-profit organization
to communicate with hand held units at special events. It was used
three times for a total of aproximately 30 hours. Condition is
excellent, with all manuals and associated documentation. This
equipment cost over $600. Will consider offers in excess of $300.

Thanks,
Stan

While Morse is a CODE that can express a LANGUAGE, it transcends
ASCII characters and many other encoding methods because it has rhythm,
tone, style, and can be expressed uniquely, yet be commonly decoded
and understood. Degrees of appreciation vary from simple RR to
near opera like emotional involvement and appreciations. Perhaps
the links to music are where the bridge to a LANGUAGE like description
occur.

Morse also seems to use a special area of a person's mind that many
find stimulating in an unusual way. If you use Morse regularly, you
may find that you do other unrelated things and sense the stimulated
by Morse part of your mind participating.

What if you wanted to play the flute, but a law required that you learn how to play the harp before you were allowed to play the flute?

What if you didn't like the harp and only wanted to play the flute, and other flute players called you lazy for not wanting to waste time learning an instrument you had no intention of ever playing?

Some people want to get into the hobby of radio to talk on the radio. They have no desire to use morse code. How silly it would be to waste the time to learn morse code, only to forget it once one has the license to go ahead and use voice.

Only people who intend to USE morse code should learn it.

I thought the code requirement was for INCENTIVE purposes for a HOBBY that obviously needs to be regulated by the government so it won't turn into a fiasco like the mistake that happened with CB. You don't need to learn CW to be a ham and if all you want to do is rag chew on local 2 meters or other VHF/UHF freqs that's fine. They did away with CW in most military services because there are more effective ways to communicate reliably in war time. War is not a hobby (to most) and the military has a hard enough time teaching people with a 6th grade level education how to fire a million dollor rocket by "pushing the RED button" that they don't have time to spend teaching a HOBBY to 6th graders, most of who did not want the job to begin with! Ham radio is not a "way of life" it is a fun way to enjoy life. A code requirement provides incentive to upgrade. Our society (meaning the United States) over the last 10 years or so have become a bunch of whiners and get really irritated when told "no--you can't have it all right now!" If prospective hams spent as much time focussing on learning the code as they have whining about the requirement--there would be a lot more general class and higher I am sure. I don't like stop signs. Sometimes I like to drive fast. I think gas should be as free as water and I should not have to buy insurance and pay taxes. Learning the code shows you are somewhat dedicated to your hobby and perhaps worthy of increased frequency priviledges thereby allowing you to communicate with others who enjoy the hobby in other parts of the world. You are in effect an ambassador of the US! We could use more good ambassadors, that't for sure. Look at all the lids (former or current CB'ers) who took the time to learn the code then abuse it on 20 and 75. Perhaps the FFC is finally getting around to some long needed enforcement and are taking away the privilege. Just like driving--it is a privledge--not a right. So you don't need to learn much to ride a bike (scanners) but need more to drive a car (vhf/uhf no-code) but you need more road tests for cycle endorsements, big rigs, hazardous materials, flying an airplane, jets etc., pass 5 wpm you get some limited HF. Pass 13, you get to play with big rigs and big amps. Pass 20, you can do it all. I'd like to do it all and fly a jet but don't have the time to learn it all and get my 20 just yet! And I still shy away from the CB-like chatter on the ham bands, but still love to chat on 2 meters and give out my 1010# to all the KC***** call signs I hear on 10 meters. I always try to tune into a CW rag chew just to see how many characters I can copy at 20+wpm from the oldtimers who don't need to write anything down! A friend of mine has over the last year spent close to $50,000.00 on antennas including a 3 element rotatable full size yagi at 180 feet. 12 monoband antennas in all, and ALL are cut for the CW portions of the ham bands. CW is alive. Just because the military did away with it does not mean hams should also. After all, I want a college educated officer to get a VERY clear error free packet transmission before he tells the 6th grader to "push the RED button!" Kwitchyerbitchen and learn the code--or don't drive the big rigs!

Don or Darla Arnold wrote in message <3727AA1D.9F4B2D76@datasync.com>...
ALL the below are VERY CORRECT and TRUE, BUT,
is that ANY reason to use it on a TEST for getting your ticket
keep the subbands..if you want, EXPAND them if you like

IF we use this MODE to test people should we not have a test to see if you can talk correctly for phone, type correctly for packet,
and expand that by building your own computer for digital modes.
THAT'S ALL I AM AGAINST IS FOR A TEST
keepe the mode if it makes you happy but don't use it for TESTING.

Gord Skiffington wrote:

Howdy Dan....In all the hoopola about whether anyone should or can't use morse anymore.....a few points never seem to be brought out...or are only mentioned briefly.
Morse - Is a mode that allows communications to be copied verbatim easily (you can come close on voice or often do it if words are standardized but its not easy)......
- Is a mode that is indeed digital but which requires the most rudimentary interfacing and for which our own "processor" causes error correcting and speed compensating depending on the ability of the other "terminal" or "line" conditions.
- Is a mode which transcends language and dialect barriers when suitable signals are used...such as the international "Q" signals...and others. Hard to get most computer systems to do that yet and our ability to merely speak one language (english for example) with a wide variation of accents is hard enough sometimes.
- Is a mode whose "standardization" is unheard of in communications, where for at least a hundred years was not obsolete for the purpose of basic communications (stuff that's GOOD for critical use...such as lifesaving...and cheap commerce).
- Is a mode which, when the equipment is tired....just needs a good dinner and a cup o coffee to revive it.....stuff we have around anyway !
- When send using CW transmission (the 2 are NOT the same!) is extremely effective, using suitable narrow filters at both ends, for solid communications under the worst circuit noise and conditions. It might not be the very best...but when you consider the rudimentary equipment needed it becomes mighty attractive.
- Is a mode which, because it only requires very basic equipment, lends itself well to "field repairability".....a handy thing if you've ever sat in a remote spot and listened to digital signals that couldn't connect to you...telling yourself...."if they'd only just turn 'em on and off...I could get the message! After all...what is slower....a slow sent message or one that never arrives????

There's likely lots of other good and bad reasons why anyone should keep morse alive. Yep its old.....but well made and the fact that it hasn't undergone a million transformations tells us all that it works well. It is slow, but when mere text will suffice, is an adequate method of communication in conjuction with simple equipment. It does require skill to use...but everything we do also does (Tell me that a windows NT system hung up on a satellite link doesn't require skill to figure out what happened!). There is also a thing about operating morse that only morse operators may truely feel...but its a kindred spirit that transcends whether you were a mere ham or a skilled commercial operator, a struggling boy scout trying it or a pilot who was able to make himself understood when his mic stopped working. To that last end I can only offer that to those who WON'T use it...it will always be a thing despised....to those who do or have, a thing revered.

2687. FS/FT: Hallicrafters knobs

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-29 00:00:00 UTC
From: k6sde@my-dejanews.com
Message-ID: <7g880e$5uh$1@nnrp1.dejanews.com>
Source record: 109611

I have Hallicrafters SX-62 era knobs. All but one knob is a later style FLUTED KNOB and the other knob is a STRAIGHT SIDED main tuning knob with a silver center insert.

The knobs, of course, also are proper for many other pieces of Hallicrafters equipment.

The fluted knobs have only been given a cursory "bath" and need some cleaning up and polishing. The pictures below have been sharpened to better show you their condition and the head on view emphasizes pits and defects. Since the skirts have recessed lettering (engraved?) it should be possible to do a bit of surface polishing on the skirts to improve the looks and remove some of the aluminum corrosion and pitting without destroying the lettering.

One of the knobs with the 0 to 10 scale on it has had the skirt squashed in skipping due to poor packing when the receiver was sent to me and another one or two have knobs that have skirts that are a bit distorted but I think those can be fixed with minimum problem. Fortunately the squashed 0 to 10 skirts seem to be fairly common and the skirts are fastened on with screws so it should be possible to replace it if it can't be reformed.

Take a look and note the NUMBER of the knob you are interested in and view it in top and partial side view and drop me an e-mail and we can discuss your needs. I am NOT going necessarily to sell the knobs to the person who responds first but would like to give others who don't happen to be reading posts every few hours a chance to let me know what they're interested in.

Hmmm..An HT that repels insects....Hmmm...BUT will they make one that kills dandelions and poison ivy? AND What will happen when the surviving bugs evolve to be tone deaf? There are already lots of bugs who can't carry a tune. BTW seriously what frequency(s) are the bug tones? Although above the range of human hearing, those tones might call dogs that bite worse than the mosquitos. Do you know that some bugs can emit tones to attract mates by rubbing their feet? People who omit smells by rubbing their feet, on the other hand, can repel people. You can try this on Field Day if your HT gets blocked by another HT that is within too close a range. It works even without an Alinco HT! PLEASE keep thinking, Hams need more classes...perhaps maybe Exterminator class? I never met a ham I didn't like, Bob Wex w2ilp (Insects Love Picnics) -- .- -..- .. --
---

Big fleas have little fleas on their backs to bite 'em,
And little fleas have littler fleas and so on ad infanitum!
--?--

There they go using Hams as guinea pigs. If the mosquito chasing tones are a success for Hams, they will add them to laptop computers for sure and the Hams won't get any royalties.

Had both, the w2a is more modifiable and has more memories-pro. the 24at is a much more rugged, better sounding due to a larger speaker, and as intermod proof as I have ever seen an ht to be. (great if you want to use an ext. antenna)..... Do not try this with a w2a. trust me if you put an ext ant. on this one it will be just about useless anywhere near intermod. and the speaker is about the size of a thumbnail thus providing lousy insufficient audio. those are the only faults with the w2a. - 73 alan WA2AR

Hi ,Dan!

Well, in just a few short days, you've managed to create quite a stir
with your question (wink) ... 19 replies so far, and I bet it ain't
over yet. I've noticed in the past, that nothing gets things stirred
up quite so much as code and licensing issues. Anyway, well done!

I'd like to make an observation about human nature. [Now, please
understand, I'm not talking about you. Heck, you asked a question,
and you seem to be the best example of an open mind I've seen in this
thread so far.] Anyway, I've noticed that when my mind is made up
ahead of time, it tends to adopt as its purpose to support that
decision in any and every way it can. And once that purpose is
established, it will endeavor to interpret everything I hear and see
as evidence I am "right". It doesn't make me right, mind you, but
it's a mighty temptation to judge everything and everybody as either
threatening or supportive, with no gray area between.

So whenever I encounter myself feeling defensive (or offensive) about
a subject, I suspect I've pre-determined how I want things to be, or
how I want things to come out. And that's a warning signal to me that
my mind is pretty much closed. For me, the warning flags went up when
I though somebody might threaten my beloved CW.

But on re-examination, I think both "sides" can find common ground.
We don't necessarily need code proficiency tests for everyone to prove
they can do it ahead of time. Nobody's going to get on the air
sending morse when they only know 12 letters of the alphabet. So,
maybe just a sampling of questions on the written tests, concerning
the use of the mode, would be in order - to show an understanding of
the mode and its operating procedures, for those who have the
potential for using CW. Same would apply to voice, digital modes,
repeaters, satellites, anything that has significant usage on the ham
bands.

After that, it's up to us avid CW fans to promote and expose the positive and rewarding aspects of the mode (and there are many). We haven't done a good job of that thus far, maybe as a result of being so defensive.

As for actually learning CW, when I think about it (at least for me), the fastest part of the learning curve was when I was practicing it "on-the-air", without the pressure of "having to pass a test". It also happened to be the time that I really learned to love it.

Come on, folks - both pro and con - let's look for new viewpoints, consider them with an open mind, and see if we can't make the amateur service even more fun and more friendly than it already is.

73,
monty N5FC

Message-ID: <19990429011111.02889.00000186@ng-cm1.aol.com>
Source record: 109626

Hello Ken,

I will offer what I know of these two RX's which is more from what I've heard from other knowledgeable sources than actual hands on experience.

The Racal 6790GM is by far the older design and has been around for a long time. A good number of them have been showing up on the surplus market because they have passed the age where the federal agencies that have them are authorized to replace them with newer GSA approved radios.

Over the past 15 years, I have observed some 25+ Racals in use at each of AT&T's HF SSB Marine Stations, KMI and WOM. The comment was made that the failure rate was high on them and they ran rather hot. Of the number at each statiuon, approximately 20-25% of the number were kept as spares to put on line when a failure occured. The Racal was also very expensive to repair.

The original HF1000's were said to have some problems as mentioned in Monitoring Times. I believe these were corrected on later versions, but I do not know the details, time frame, or serial numbers involved. Old MT's might be a source for this information if you don't get a response about it. The radio is of course a more modern design.

Parts availability may be an important consideration as would the manufacturer's willingness to repair a radio for a hobby application. This may be a bit of an over reaction, but I would be sure the Racal would have factory support going forward if you feel that you may need it. W-J has had numerous ads in MT and Pop Comm and is more of a consumer oriented organization. The HF1000 has been shown for a number of years at the Dayton Hamvention. W-J receivers of all vintages are in common use at many of the HF CW commercial stations.

I looked at getting a 6790GM at one time and decided against it for the reasons above, although I did find a Mackay Marine HF RX at Dayton at a very good price and took a chance on it. Been fine so far, although to be honest, I like the R5000's I have very much as well as the receiver sections of my amateur transceivers.Some other high end radios that may fit your requirements are JVC and Icom.

Good Luck

Morse code is a language. A digital langauge but still its a langauge.
Unless you use the Clinton logic of words and what they realy mean .....
then it could be anything .... or nothing.

This issue bothers me too. What I decided was to install a vehicle power plug (molded end with one round pin exposed and the other lead is recessed) and I splice that in line. That allows me to unplug at either type of connector and allows reliable connections and switching between my vehicles.

Although the flat pins of the supplied connectors are not outside of the white plastic they are still somewhat susceptible to causing a short when not connected to its mate. The vehicle type power connectors do not pose that danger.

2709. Icom IC-2350H - Low Output Power

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-30 00:00:00 UTC
From: "Chad Johnston, KI8CU" <webmaster@nuwaysupply.com>
Message-ID: <7gcg0j$hm8@newsops.execpc.com>
Source record: 109433

I've got an Icom 2350H which I recently decided to bring into the shack in the house. I hooked it up, with a SWR/Power Meter in-line, and found that I'm only getting 4/9/22 watts output, instead of 5/10/50, as it used to put out... My match is about as perfect as you can get -- my reflected power almost doesn't even register on the meter...

Are there any components known to fail on this radio which would cause this? I'm experiencing no degradation in receive, BTW.

Please reply directly to my email address with any ideas, etc. I'd like to approach this repair with a little knowledge under my belt... BEFORE I have to talk with Icom.

Thanks, in advance, and 73.

Ken Osmond <kenos23@nospam.com> wrote:
> I'm about to buy one of these high end receivers and
> don't want to make a mistake.

I'm listening to an RA-6790/GM as I type. However, if you have the money to by the W-J, do so, if you don't invest in an Drake R-8B.

There are some serious problems with exotic commercial receivers for people who are not extremely technically qualified or not made of money. Many of these designs are 20+ years old. There performance is very good, probably not that much above a quality table top like a Drake or JRC. They generally have about ZERO features in terms of memory, band scan, etc.

An even bigger problem is service. They were largely designed to be repaired by replacing major assemblies until they worked. (Like a computer.) I suspect that even the factory declined to repair the modules. This means you might have to take a chance buying a module you only think is bad. Plus such a part might not be readily available.

A couple of examples from first hand experience:

RA6790/GM: No memories. (Does have a computer I/F) No notch filter. No noise blanker. LCD displays die with age. (2 each at $100). Standard 6.8KHz filter is really more like 9KHz, too wide for serious DX. I have a second radio with frequency synth problem that defies repair, and, yes, I am competent and own lab grade test equipment. Oh yes, a service manual might cost another $100.

Cubic R-3030: High phase noise in synthesizer makes signals down in the noise very hard to copy. Front panel key pad is poorly debounce, and almost unusuable. They all do this! Clearly they were used under computer control.

So, my advise, buy a brand-new radio with a warrantee and accessable tech support. Or, buy and old quality tube type rcvr,like a Hammarlund SP-600, or even an R-390A. These can be trouble shot to the component level by standard TV repair techniques. A hobbyist can deal with these things.

My two cents,
Al

We extensively use glass mount antennas on most of the passenger vehicles for the Pennsylvania Turnpike Turnpike. They work rather well and stay put if they are installed correctly. Follow the installation instructions to the letter and you'll do fine. Make sure that both sides of the glass are sqeekly clean.

Anyone aware of a good site on the web for detailed mobile
install info? I am thinking of getting two 2M or dual band
rigs and having it set up for easy swapping in/out of the cars
also so I could use one in the house. Would wire directly to
the battery with both leads fused and thinking of getting a device
to kill power after the ignition is off for 10min or so-any
recommendations there?? Wire would then go thru firewall to
some sort of in vehicle power panel. Not sure what to use or
what type of connectors to install here either. Any opininions
on install or what radio to get while not spending an arm and a leg
welcome. I don't need anything fancy, just basic repeater ops
with tone encode/decode and scan. On the other hand extended
receive would be nice. And maybe the ability to run the mobile
as a repeater for my HT. Yikes, there goes the "simple" and here
comes the $$$$. Oh well, all input welcome.

It's the antenna alright. I'm not familiar with that antenna, but you
need a better choke at the feedpoint to reduce common mode currents.
What kind of balun is used on that antenna? Maybe try a different balun
or use a choke balun made from coiled coax.
Also you could add ferrite beads to the coax at the feed to reduce rf on
the line. MK

2731. Euro travel transformers as HV supply?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-30 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <372A109E.5FBD3C36@asu.uswest.net>
Source record: 109455

Can someone describe the circuit that composes those little (3"x3"x4") 240/120 travel transformers you take along to use your 120V appliances when visiting countries with 240V AC mains? I had an idea to use one in a HB power supply for running a little homebrew tube receiver. What kind of isolation and current rating do these puppies have?

I am as sentimental about the mode as anyone, but morse is emphatically not a language, anymore than AMTOR or ASCII. The distinction is linguistic, but really commonsensical as well. A language must have a grammar and meaningful inflection (the swing of a bug is accent, but it doesn't convey meaning, as the rising pitch of spoken language at the end of a question) as well as syntax and lexicon. CW has a vocabulary (sort of) and some idiom/colloquial syntax, but no grammar, and it really just transposes whatever the written language of the communicators is into sound pulses. Finally, a language must be self-sustaining and complete, and morse/CW is not. It depends on its users having and using a real language, English, Spanish, Navajo, whatever, to encode and decode. No communication is possible using CW alone (hard to find two people who know CW and no language). Again, I ain't dissing CW, I love it, enough to keep it in its pure, lofty place.

> Al Klase - N3FRQ

I will have to agree with Al's well reasoned posting. I have owned some of the exotic equipment. I now have a very good, but very common, Drake R8B. There are several problems with the exotics. The first is that they were never intended for general use and, thus, often have terrible ergonomics or sound quality. These are acceptable traits in monitoring equipment which is intended to always be computer controlled, but maddening characteristics for the general listener. Secondly, if the exotic was primarily designed for use by a governmental agency, the cost of commonly replaced parts can be absurd. This is often not a result of government purchasing excesses, but rather an inevitable product of limited production and low economies of scale; but the result for the consumer is the same ($100.00 plus LCD screens). The third, and worst, problem with the exotics is that they are sold in very limited numbers, often for a short time period. This means that few people are familiar with them or can service them, parts are not generally available, and a spare parts chassis will never be found. After some years, it will become difficult, and then impossible, to keep it working.

If you want one for the bragging rights, fine. Or, perhaps, you might want one as part of a collection where its design, if not its use, would be important. However, you had better be a fully qualified technician to service it; and you must realize that the performance advantage the exotic has is probably in a range or function that you will never use, and the guy down the street with the Japan Radio Corp. set or the Drake is actually getting better actual results in the type of listening you are actually doing.

For what it's worth.

The small ones, 50w or so, are transformers. The larger ones that will
operate a hair dryer, etc., are sometimes only a diode in series with
the line or the equivalent. The former have good isolation, the latter
none. Your little radio will surely run on a 50w transformer, but be
sure that the unit you use is really a transformer.

I just bought a TM-V7A, and it seems to work fine. I use the cross band repaet, it works one-way or two way, you set it up. It can be remotely controlled by any HT using DTMF. I don't seem to have much intermod problems, and I go into areas that I would get killed with the icom IC-2700H that I had before. You can shop around, but the best price I found was at denverradio.com, $429.00, no S/H on orders over $100.00 Have fun & 73, KF4PXZ, RJ Glenn.

I'm sure of it. Until the advent of these tiny transceivers, radios market-positioned as "mobiles" in Japan were generally sold as "beginner"/second radios in the US. The Kenwood TS-140S is an example of this; put it on a better-than-mobile antenna, and its receiver overloads badly. Nowadays, marketing spin on this side of the Pacific seeks to make buyers consider every radio as potential new DX pileup/contest rig regardless of what its designers intended it to do.

And if we think we have it bad, Europeans hams *really* put radio designs to the test, especially on 40 meters, with the ham band stretching from 7.0 to 7.1 MHz and multi-hundred-kilowatt local SWBCers picking up at 7.1 MHz.

Assuming you mean "extended receive/transmit" mods...yes:

1. Remove three back screws, and open the unit.

2. Snip the loop of wire. It'll be quite obvious which one - it's the ONLY one.

2751. --IC-2710H vs TMV7A vs FT-8100--

Newsgroup: rec.radio.amateur.equipment
Date: 1999-04-30 00:00:00 UTC
From: dwave35@aol.com
Message-ID: <19990430020717.24763.00000388@ng14.aol.com>
Source record: 109512

I am going to be purchasing a dual band radio, possibly at Dayton, and would appreciate any pro / con comments on the Icom IC-2710H vs Kenwood TMV7A vs Yaesu FT-8100.

My requirements are:

That the radio has a decent front end and can handle strong commercial signals (I live near a large metro area) on both bands, especially 2M.

The sensitivity in the 156-162 MHz area must be very good to copy weak signals in the Marine and Railroad allocations and be as IM free as possible.. Also 450-460 MHz.

As the use will be mobile, the display must be as readable as possible in all lighting conditions and user friendly.

Each of the rigs apparently have dual simul receive, remote mount front panel capability, multiple scan options, dual speaker outputs, and cross band repeat, so the assumption is that they're equal there. The comparisons in Nov. 98 QST did not include the Icom 2710H. In that piece, the Yaesu did not do well in out of band receive sensitivity, which would be a real negative for me.

I have had input that the TMV7A is poor dealing with Intermod and that is is great with Intermod. Guess it depends on where you live.

The current 2M only radio is an Icom IC-228H which has been pretty good for the purpose but as a single band only radio.

Any thoughts would be appreciated.

Dave

Has anybody constructed the design found on www.hamradio.si in the Hardware page, namely the 23/13cm designs for a 1.288m/s PSK packet radio device.

if so could you please contact me.

-Howdy, I have two Yaesu 3000 2m 70 watt rigs. These dudes are top of the line with the following features.
1. RX=110-180 300-520 800-999
2. cross band tx
3. range transponders
4. smart search
5. four level tx up to 70watts
6. dtmf decode reader
7. dual-watch
8. DTMF remote control
9. programable funtion Mic not Mike
10. built in volt meter
ETC.....
The two of these where bought for 429dollars each.
both are in fine working order. Depending on what you have weather I offer one or two. IE: Azden 6m FM=One or Kenwood TS-60=Two.
I want a 6m rig...It don't have to be pretty (IE:9.99). It don't have be to in mint condition (what ever that means). It don't have to be rare. And you don't have to be a non-smoker. But, I'd like the dog-gone thing to work.

You might ask why am I trading...well I ain't got that kinda money to buy a new 6m rig but, I do have a couple of nice radios to trade. How would I rate my radios ...well...I wouldn't be ashamed to take them to a field day event.
And I'd trust them to work in a wild storm spot'n trek.
So what I'm saying is the dog-gone things work fine.

From: Vic <ke4qjk@qsl.net>
Message-ID: <LMgW2.4167$3F1.208139@news13.ispnews.com>
Source record: 109523

Dave,

I have no experience with the the Icom or KW you mention, I have heard another complain about Kenwoods blue screen being hard to read in bright light

Regarding the FT-8100, I think you will find it a great display and controls easy (though not "intutive") to use.

I wondered how the Yaesu display would look (how easy it would be to read) before buying. In the house I personally do not like their display at all, amber is prefered. However for the automobile I think Yaesu displays are best ... VERY easy to read day, night, direct sun or not!

Functionality: I have the Ft-8000 (similar radio to the 8100) and think it is a GREAT rig. Many features, dependable; out of band reception is GREAT on AM, police (154mHz) and RR is fair to good. On the 440 side out of band reception grows weak in the 800mHz range (police are up there too) but it is a VERY W-I-D-E band receiver. It does cross-band well, scans very fast, V-V & U-U are extremely handy! I was thinking about buying another 8000 or the 8100!

Vic / KE4QJK
DWAVE35 <dwave35@aol.com> wrote in message
news:19990430020717.24763.00000388@ng14.aol.com...
: I am going to be purchasing a dual band radio, possibly at
Dayton, and would
: appreciate any pro / con comments on the Icom IC-2710H vs
Kenwood TMV7A vs
: Yaesu FT-8100.
:
: My requirements are:
:
: That the radio has a decent front end and can handle strong
commercial signals
: (I live near a large metro area) on both bands, especially 2M.
:
: The sensitivity in the 156-162 MHz area must be very good to
copy weak signals
: in the Marine and Railroad allocations and be as IM free as
possible.. Also
: 450-460 MHz.
:
: As the use will be mobile, the display must be as readable as

possible in all
: lighting conditions and user friendly.
:
: Each of the rigs apparently have dual simul receive, remote
mount front panel
: capability, multiple scan options, dual speaker outputs, and
cross band repeat,
: so the assumption is that they're equal there. The comparisons
in Nov. 98 QST
: did not include the Icom 2710H. In that piece, the Yaesu did
not do well in out
: of band receive sensitivity, which would be a real negative for
me.
:
: I have had input that the TMV7A is poor dealing with Intermod
and that is is
: great with Intermod. Guess it depends on where you live.
:
: The current 2M only radio is an Icom IC-228H which has been
pretty good for the
: purpose but as a single band only radio.
:
: Any thoughts would be appreciated.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Much appreciated; that did the trick!

Interesting to note, though, that D54 actually appears to be a transistor...

Thanks again,

JL

I have need of a good power supply transformer for the Hallicrafters PS-2000
(for the SR-2000 Xcvr). If transformer good, will naturally consider
buying parts unit. If you have either, pls advise details/price/general
location/etc. Naturally, a direct/better substitute with
documentation/specs can be considered.
Thanks
dan

2768. Motorola HT220: can it work on 440 ham band?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-01 00:00:00 UTC
From: kb6ojs@gte.net
Message-ID: <MPG.119501a9dc27461698977b@news.gte.net>
Source record: 109379

I have recently come into posession of five Motorola HT220 transceivers. Two are two-channel radios, three are single frequency. All are apparently crystal-controlled with frequencies set up in the 467MHz area. Questions:

1) Can these radios operate in the vicinity of the 446.000 calling frequency on the 70cm ham band, either by simple crystal replacement or other minor modification?

2) Where are replacement crystals available for these radios?

Thanks in advance for any and all replies.

(I also have one MT500 HT, also set up for the same frequencies, but I don't think I have a charger for it. <sigh> Same questions for this radio, though.)

Source record: 109382

I have been using the 706 MkII for over a year now. Last winter I used it a bunch in the shack for 75 meters. Using a nice large speaker - it does wonderful. The DSP is great and the IF shift is very functional. All the extra button pushing some were whining about never was an issue. I put my favorite frequencies into memory and went on my merry way.

The receiver is more than adequate - but less than high dollar performance. But, it holds its own on 75 meters in the evening. When the going was really bad I would switch to my 990.

I now have the little rig in my trailer with a High Sierra antenna and love it. I use the SM-6 mic, as the standard mic that comes with the rig is trash.

I have used the rig on AM and it does a great job there too. It works as a scanner for the local sheriff and I can listen to AM and FM radio on it also.

I used two meters one time to make sure it worked. Not been back there since, so really have no opinion about it. This model does not have 70cm. But I wouldn't use it if it did.

The MkII was a good improvement over the first 706. I wonder what the FT-100A will be like!

As the owner of a pair of RACAL RA6790/GM receivers, I've enjoyed reading everyone's excellent advice. With some clever shopping, you should be able to pick up a pair of working 6790's for less than the price of a used Drake R8B (certainly less than a new R8B!). There are so many of them, I don't think the world will ever be void of replacement parts. I would bet that there will be 30 or more 6790's for sale at the Dayton Hamvention in two weeks. It's really not hard to learn to swap modules, especially with the BITE doing some of the detective work for you. You'll need a service manual.

Now, for a totally different, totally right-brained view: I simply enjoy operating professional receivers more than amateur or consumer receivers. I previosly had a pair of 6790's and sold them, only to lose interest in listening. My amateur HF rig, with it's excellent general coverage receiver, just collects dust. I chose the RACAL's mainly because the market is flooded with them and their price reflects that fact. I'd love to try a Harris, Cubic, W-J, R&S, etc. On the other hand, if you can afford the W-J HF1000, is there really a question here?

Hello All
I have a heathkit SB 104. The rig needs some work. It needs finals (one could use the motarola MRF 455A Its alot cheaper then the heath original final) 10 ohm bias transistor and the control IC for the last digit in the display. Cosmeticly its in good shape. I'm asking 100 bucs for the rig plus shipping. I'm keeping the power supply for my packet operation and I have sold the VFO all I have left is the rig. BTW the receiver in this rig is HOT! If you are interested drop me a email oris@dirtball.com

You must remove all the control knobs on the top and unscrew the shaft collar nuts from each control. You then pull the bottom gently apart and slide the controls back, out of their holes and the unit is now separated. I'm not sure, but you may also have to unsolder a faraday type shield to get at the BNC. Note: when your 2 meter audio gets extremely weak or disappears, it will be the first transistor from the antenna. In most cases , the chip is ok and you will now have to completely disassemble the entire unit and put in the $6.37 replacement xistor. A long process, but worth it. They seem to blow most often when using cross band repeat.

Please if anyone knows how to enter the DEALER mode without knowing Dealer password for this Model of JRC mobile VHF radio ???

Password was 22222222 but i have CLEARED ram memory of the radio and now apparently it has new DEALER code or old (factory programmed in EPROM) id not know how to circumvent this..

Any suggestions .. ??

regards

Fox

I am about to buy an ICOM 756 and would like advice on which power supply to get. I don't want to just get by , but I don't want to go overboard either.

Most of the time I will be using CW.

Any suggestions?
Thanks

Source record: 109468

I have several 430-470 mhz Motorola Visars for sale. All are in excellent condition with little use. Most have hi-cap batteries, a mix of nicad and NIMH. Dual chargers are also available. I even have a few speaker/mics and belt clips, to be sold only with radios.

The basic package is: (2) Visars w/hi-cap batts, dual charger. Price: $600/pkg.
Additional accessories: Belt clip...$15, add'l slim battery...$20, Spkr/mic...$30.

Buyer pays shipping & COD. Programming is available.
Thanks.

Message-ID: <372B3501.D87@pv.infn.it>
Source record: 109469

I'm Roberto IK2RND , I have realized a replacement board for EX-314 MEMORY BOARD installed in these
Icom rigs : IC-745 IC-751 IC-751/A ICR-71A/E IC-271 IC-471 IC-1271.
My board called EPROM/RAMBOARD definitely solve the problem related
to the lithium battery fails. When battery fails the rig stop to work and you need to send your radio to the Icom service center to replace battery and reprogram the board.
Data in the my board are stored in an EPROM chip the RAM is used only to store
The 32 memory channels.

Mike (KD4LLA)

For the people who like peace and quiet: a phoneless cord <grin>!

The longer Bill Clinton stays in office, the more we pay.

Our justice system pays because he has opened the door for millions of us to play games with the notion of telling "the whole truth" under oath. Our military personnel pay because they have to carry out their duties while grappling with questions regarding the motives of their commander in chief. Our national intellect pays because, with his myriad verbal contortions and willful deceptions, the president has become little more than a walking, talking insult to our intelligence. Finally, the taxpayers pay because, in his efforts to keep "looking presidential" and "doing the work of the people," he is creating more new programs and growing the government.

Haven't we paid enough already?

See my web page at http://www.alaska.net/~mdickman/Index.htm

Source record: 109472

The ICOM IC-271H operates 2 meters FM, SSB and CW. This is the high power version with up to 100 watts output! This radio is considered as the standard of comparison in all mode VHF transceivers and is great for working locally, repeaters, DX and satalites. It includes 32 frequency/mode/offset/tone memories, built-in PL tones, scanning, adjustable tunning speeds, RIT, all-mode squelch and tone control. Output power is adjustable from 10 to 100 watts output. 12 vdc operation. Frequency coverage is 143.8-148.2 Mhz. Hand mike, power cord and manual are included. Mint condition physically and operational. Picture available on request. $650

Excellent advice I think.

Relating my own experience, I bought an Eddystone EC958 in 1984 for 300 ukp,
a lot of money at the time. Built in the late 60's/early 70's and described
as a professional grade receiver for general communications use it has very
high stability (long term less than 20Hz) so ideal for rtty etc.

Although in very good condition, I decided to order a new speaker and
'front panel' (not the main panel, just the thin plate with all the legends on)
and a service manual. A bargain I thought at 36 ukp.

The receiver has facility for an internal FSK module (ideal for my rtty) an
an internal crystal calibrator. The prices qouted for these were 209 ukp
and 89 ukp respectively. In other words, as much as I had paid for the whole set.
Obviously, I decided I could manage without them !

Fortunately (up to now!) the set has been very reliable, but given that
it was about 15 years old when I bought it, I think I've been lucky.
The only plus side may be that this set will hold its value better than a
'new' set of comparable purchase price.

Given a choice today, with a budget of 1000 ukp, I would probably buy a
modern 'amateur' receiver (Icom/Kenwood/JRC etc) as opposed to a professional
set (Racal/WJ etc) because I feel the features are more in-line with what we
wish to use the set for and servicing, if needed, would be cheaper.

But whatever you buy - happy listening

Barry

I had always assumed that these were true two winding transformers, but recent tests showed most of them to be autoformers. So take your ohmmeter and check continuity between primary and secondary.

Maybe a couple or three husky AC wall warts back to back would be a better choice. A 24 volt 1 amp is 24 watts, and one driving two more backward whose original primaries are in series would provide 220 volts at near 100ma. 200 ma if you use 4 of them.

2810. Need Larsen NLA Mount

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: Joe Schlatter <w4hh@3wave.com>
Message-ID: <618X2.119$I3.11179@news5.ispnews.com>
Source record: 109280

I need a discontinued Larsen antenna mount, model NLA. It consists of a couple of brass sleeves -- one with expandable "fingers," a couple of threaded sections, a nut or two, rubber washer, silver pin, and a few other tiny parts. It mounts in a 3/8-inch hole drilled into the vehicle body. Larsen no longer manufactures this mount and no one that I find has any old stock.

I have a NLA-Q (VHF/UHF 1/4-wave whip) that I want to put on my old truck. I have some of the parts of the NLA mount but am missing most of the mount.

Anyone out there have a complete Larsen NLA mount that you would part with?

Thanks.

Source record: 109281

RF excites currents on the surface of a conductor. Use strap, braid or tubing, maximize surface area and minimize length. Any bus must be short compared to a wavelength at the highest frequency you're using (I've seen interesting issues at FM stations with half-wavelength-long audio consoles in "high RF" environments). Avoid loops.

Lee, if it's FM you're after see: http://www.knet.co.uk/akd/4001.htm,
but if you need SSB or AM, you may need to consider the FT847 or else
a transverter along with an exciter on another band.

Having been in RF both professionally and recreationally for more than a couple decades, I honestly feel that if you purchase say an AOR 7030+, JRC 545, or Drake R8B, the only way to tell a significant difference between their performance and for instance the WJ, would be with $30,000 worth of test equipment. You'll never hear it in practice.

If you REALLY want the best possible performance, get one of the above "consumer" radios and invest the difference in cost in an antenna "farm". MUCH bigger bang for the buck and you'll have performance second to none.

PS- when I was in the military, many places had high end ham equipment as backup to the expensive stuff because it was so reliable and easy to fix with standard troubleshooting procedures. (and worked as well or better than the rack mounted gear)

pls send any reply to mbeutler@powerweb.net (am on someone else's computer)

Phil, they're no secret over here. Every housewife drives one and they wear Carhart canvas coats and LL Bean rubber boots too. This is juxtaposed to their bottle blonde hair, diamond earrings, and red fingernails. Too bad we can't get any of them interested in Ham Radio. 73, Brian/N0iMD

2829. FT-920 w/upgraded filters & switching kit, MINT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: Guy Atkins <think.dx@mindspring.com>
Message-ID: <7ghs98kpn1@nntp3.atl.mindspring.net>
Source record: 109342
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

This is a rather unique used FT-920, because the transmitter portion has NEVER been operated or keyed. I'm a SWBC & foreign mediumwave DXer and was just interested in using the very good rcvr section. Includes original box, manual, hand mic in unopened box, Yaesu FT-920 videotape, DC power cord, INRAD 1.8 kHz (SSB) crystal filter, INRAD 6.0 kHz (AM) crystal filter, and INRAD's new filter switch kit. The switch kit is production ser. #001, and it works great to allow both the 2.4 stock Yaesu and INRAD's 1.8 filter to be used on SSB. George at International Radio prepared this switch kit for use on a DXpedition, before the official public release of the product. See http://www.qth.com/inrad for details on INRAD's aftermarket filters. Total cost
of the extras in this FT-920 was $320.

Less than 50 hours use (2 DXpeditions) on this like-new FT-920. $1125 + shipping for all. Contact me for details, references, etc.

Hi Guys, I have the following looking to sell or trade for UHF or VHF Ht's or Mobile, preferable looking for some of the old HT, Tempo, Wilson or whatever.

I also have assorted collection of memory 30 pin and 72 pin to numerous to list, email me with your requirements

qty (1) Kingston technology SCSI tape drive 8 gigabyte capacity, internal drive it include the pull out frame,with new version of Backup Exec, this drive uses the Travan 4 tape cartridge $ 50.00 and is supported in windows98.

qty (1) Conner parallel port external tape backup unit, uses DC-2120 tape cartridges 240meg compressed, with carrying case and cable and new version of Backup exec also supported in windows 98. $65.00 plus shipping

qty (1) American Power Corporation uninterrupted power supply 600 watts, model backup-ups 600, has a rs-232 port for unattended automatic shutdown on power outage, software is an option not included $65.00 plus shipping

qty (1) Microsoft Bus mouse this is a the new version, with mouse and controller board $10.00 plus shipping from Cleveland, Ohio

qty (2) MIDI interfaces (music quest) and (voyetra) these are MPU-401 dedicated midi interfaces $15.00 a piece plus shipping.

qty (1) Sound blaster compatible board with the following interfaces on board, for IDE, Panasonic, Mitsumi and goldstar CDROM drives.
it is 16 bit sampling 44khz with on board amplifier and joystick port.
$15.00 plus shipping, work great with window 95 or 98.

qty (1) Aztech sound board with built in 14.4 modem voice and data.
16 bit sampling and SRS 3d sound $15.00 plus shipping.

qty (1) WavJammer pcmcia 16 bit sound card New media, laptop powered speakers, this is a great pc sound card 16 bit sampling and more $40.00 plus shipping for both. for more in goto www.newmediacorp.com

qty (1) Megahertz pcmcia fax modem card 14.4 it's the gold series $10.00 plus shipping

qty (1) Daytona 64T PCI vga card 1 meg on board very fast graphics card, it is based on theTrident chipset. $10.00 plus shipping

qty (1) ATI VGAWONDER XL24 video card 16 bit, has 2 ports for standard vga and rgb, also mouse port (mouse no included) $10.00 plus shipping

I have the following Laptop Hard drives for sale these are 2.5" form factor they have been formatted and check:
qty (1) Toshiba 260 meg model #MK172FCV $20.00 plus shipping
qty (1) IBM Model DPRA-20810 810 meg $35.00 plus shipping
qty (1) Conner CP2081 120 meg $10.00 plus shipping

qty (1) Adaptec SCSI controller board 16 bit model 1540 with cable and Adaptec cdrom utilities
$30.00 plus shipping, also supported in windows 98

qty (2) Seagate ST3283N 240meg SCSI drives 20.00 a piece plus shipping these are new in the wrapper.
qty (2) Quantum Prodrives ELS 120 meg a piece (IDE) $10.00 a piece plus shipping.
qty (1) Quantum 240sc, 240 meg SCSI $10.00 plus shipping.

I have an assortment of 16 bit Network interface cards NE2000 compatible, SMC, Anthem also 10 port hubs, the NIC's are 10.00 a piece, the hubs are $25.00 plus shipping.

If interested in any of these item please reply to craigs24@worldnet.att.net

Have the following Linear AMP parts for sale, will not split up, all or nothing:

1: Peter Dahl plate transformer: Primary: 115/230 VAC Secondary: 1250 VAC @ 1.5 Amp CCS (this produces 3100 VDC under load in a voltage doubler supply - It's a big puppy!)

8: 1500uf @450V Computer Grade Filter Caps

2: 4CX1500b Eimac Tetrodes (good medical pulls)

1: 7.0V @ 15A(?) filament xformer (will have to be dropped down to 6.0V to use with the 4CX1500b)

1: Socket for 4CX1500b

1: Dual Squirel Cage blower fan for cooling, good pull from military equipment.

1: Copies of several plans for linears that use the 4CX1500b (including Collins linear)

Asking $400.00 + shipping for the lot.

see if the connection from the bnc to the board is ok first.
its a common problem in that model for it to break loose.

2846. ICOM IC-756 HF/50MHz NICE!!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: K5JOE <k5joe@flash.net>
Message-ID: <372CB1F2.7A037C12@flash.net>
Source record: 109359

I have a really nice Icom IC 756 HF and 6 meter for sale.
True Dual Watch, monitor two different freq. on the same band at the same time, 4.9" LCD Dot Matrix Display with Spectrum Scope, Alpha Numeric Memories, Auto Antenna tuner, Quadruple Conversion Superheterodyne Reciever, 101 Memory Channels, Auto DSP Controlled Notch Filter, Twin Pass Band Tuning, Power Mos FET's, Built in Memory Keyer, PC Programmable, and Speach Synthesizer option available, (not installed in this rig yet). Also IF-DSP, and 100 watts out on HF and 50MHz.
I need $ 1,650.00 for this rig and to answer the questions about the serial number, it is 2257 and I called Icom Tech Support and they told me that this rig had all the mods that have been done to the late model Icom 756's, I bought this rig one year ago. The number to Icom Tech Support to verify this information is: 425-454-8155
You will not be dissapointed in this radio, it is a a nice one.!!
Picture on request for interested buyers.
73 and Happy Hammin'
Thanks for reading my posting.

You don't have to see, you have to hear in order to know it is a form of communication hence, language. Even signing with hands to the deaf is a language. Sign Language, most sign language does not involve letters but it is considered a language is it not. There is a book written by Peter Carron, W3DKV titled, MORSE CODE: The Essential Language.

2853. Alinco DRM-03 TX mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: al_bolton@hotmail.com
Message-ID: <372cbf36.39110420@news.demon.co.uk>
Source record: 109366

Is anyone aware of how to open up the TX range of the newish Alinco
10M FM rig, the DRM-03?

It appears to be identical to the DRM-06, the 6m radio, but the mod
that works for that radio can't apparently be performed on the DRM-03.

Any information about mods for this radio gratefully received! I need
extended TX range to drive a transverter.

2858. Cushcraft R7000 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: knarfh@aol.com
Message-ID: <19990502184018.16134.00001302@ng-fa1.aol.com>
Source record: 109371

I am pleased with the performance of my Cushcraft R7000, but the screws on the traps have again loosened, creating intermittent high-SWR. These are the screws that connect the trap wires to the cylinder around the traps. I am planning to put stainless steel pipe clamps around the traps and over the screwheads. Anyone tried this or have another fix?
73,
Frank
W0MHZ

2859. FT 8100 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: Lou - kk5yo <birdsong@pheenix.net>
Message-ID: <372CCE02.FCD@pheenix.net>
Source record: 109372

Has anyone encountered this? My 8100 fan cuts off and the audio goes away when transmitting. The higher the power, the quicker it occurs. OR, when the car is hot, it happens in a few minutes of xmit at 5W. Apparently heat related.

I think I tracked it to the 9v bus that switches the 12v to the audio drivers and fan. This can be seen on the 2m board schematic. 9v is present on the board, but apparently the parts in question on the back side...cant seem to locate them on the top.

Comments please?

Lou, kk5yo

<<you can re-post this to the newsgroup if you like, but not with my email address, since I can't take the spam>>

Newbie? Welcome to ham radio! Don't worry, after a few years you will learn lots of things. These are not opinions, but demonstrable facts.
Lots of people will disagree, but only because they either wish it wasn't true, or because they don't really know any better.

1. Yaesu puts LOTS of features in their rigs, but they don't all work

2. Icoms are quirky and don't have all the bells and whistles, but the B&W that are there all work, and all the people that work at Icom are hams (just like TenTec) so you be the judge

3. Kenwoods have a better 'polish' and are pretty to look at since they have the consumer products design teams and resources to do so where the other guys (who don't build stereos) can't, but Kenwood has a bad attitude about support, and hams in general

4. The off-brands (Alinco, ADI, Standard, etc.) use cheap parts and construction, and compete mostly on price, but sometimes they have a spec or two that are better, or some key feature the other guys missed, because they have to differentiate somehow. Buy at your peril.

5. TenTec and Kachina are the 2 main US suppliers remaining and do warrant a long look, but these rigs have 'U.S.' personalities which may or may not appeal to you

6. oriental rigs have NO personality/soul, they are just riceboxes, and you won't know what that means until you have run a CW contest or two on a TenTec and then on a YaeComWood

7. parts availability runs from great (Icom, TenTec) to so-so (Yaesu) to crap (everybody else, especially Kenwood)

8. new hams should only buy used gear that first gets lent to them by their Elmer, but ...

9. experienced hams love new hams, because they don't find Elmers and instead go out and buy new rigs even though they shouldn't, use them for 6 months, and sell them for 30-40% less than they paid ... which is how experienced hams get good radios for cheap

10. OK, you just GOTTA get a new rig; buy the IC706mkII, not G, and an IC207. (You can thank me later.)

There. I've just summarized 20 years (and $80,000) of my radio experience for you in 10 line-items. Not bad.

2871. Re: Icom 706MKIIG or Yaesu FT-100

Newsgroup: rec.radio.amateur.equipment

From: Chris Bauer <cybauer@abcprodigy.net>
Message-ID: <7ggkoe$3gi8$1@newssvr03-int.news.prodigy.com>
Source record: 109409

Just bought the FT100. I was about to buy the 706, but decided against it for a couple of reasons: 1) Someone I work with has a 706Mk2 and has had a dog of a time getting a non Icom mic to work with it. 2) I also heard that the FT100 has a better "sound" on the air (I've received good reports so far). 3) The FT100 is already set up to do packet...not that I ever have, but I may want to.

I've had the rig a couple of weeks now and have worked local guys on repeaters (both 2M and 440). Also, I've made a couple of contacts on 20 and 15. All with good reports. Now, is it a TS930? No. But I gotta say, the performance is great and I'm very pleased so far. The menus are pretty easy to navigate and the audio sounds good (only into an external speaker as someone else suggested).

I would definitely recommend this rig.

Chris

>Nonsense.

You say that because you never got your code speed up, Gary. You still hear individual letters being sent. Get your speed up and you'll hear words; you won't have to go through the translation process. For example, when I was first learning Vietnamese, to understand the phrase: "Toi di nha " my mind would have to translate word by word: toi = I, di = go, nha = home. Later, after immersion in the language, no such translation was necessary. I could understand a sentence, not having to consider each individual word.

Don't give up, Gary.

Jeff KH6O

P.S. R.r.a.equipment dropped from any fol-ups; why didn't you do that?

2875. Re: Motorola HT220: can it work on 440 ham band?

Newsgroup: rec.radio.amateur.equipment

Source record: 109413

I used to have an HT220 on the 440 band. Yours may require some parts changes since its up at 467. By all means get a manual for it. Trying to work on those without the service manual is a real bitch. The manual will also show what, if any, parts need to be changed. Get your crystals from a repuatable manufacturer like International Crystal or Jan Crystal.

Yaesu FT-2500

remove top cover and cut GREEN wire near jumper pad #8.
In some cases you may need to close jumper pad #3 with solder.

Good luck...great little radio!

Hi Steve.
Yes the HT220's can be converted, down to the 440 ham band., I have done it
but you need some equipment to do that (Freq counter and a signal generator
or a service monitor, cushman or Motorola) but it can be done) also crystals
are available from International and also Jan in Florida.
It takes a little work but you can have a nice HT that is rugged enough to
be dropped.

2884. ADMS-2D Serial Number

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-02 00:00:00 UTC
From: "Joel B. Black" <jbblack@mindspring.com>
Message-ID: <7ghf5c$p2i$1@nntp8.atl.mindspring.net>
Source record: 109422

I purchased ADMS-2D yesterday at the Birmingham Hamfest and cannot get past the installation. I enter my call, name, and serial number in the dialog box that pops up, but then I get a new dialog box that pops up and says,

"Please enter a valid password." <OK> <CANCEL>

The serial number I am entering is in the form of:

xxxxxxxxxxxxxxx

The above is 16 x's. Is my format incorrect? Am I missing a number? I have tried replacing 0's with O's and this has not helped.

I know I should call RT Systems, but I am going on a trip tomorrow and would like to have used this product.

Thanks.

Joel B. Black, KS4AW

Tram D201A,40ch. tube base.This was a display unit from a closed CB shop that has been in the box for 15 years!! Unmodified with the factory anti tamper seals in the original box (box is kindda beat up do to age) with the original manual,warranty card,D104 mic (mic has a scuff on the base),etc. Has a few ultra small scratches on the top cover (about an 1/6 of an inch) from other equipment that was displayed on top of it. If you are a die hard Tram collector this one is for you! As close to NEW as you will find.Price is $650.00 + shipping.If you think the price is high,call Maycom and see what he gets for used (and abused) D201A's. If you need more info you can call (530)241-0843 or email me KF6IKC@webtv.net

Take care,
Stan

From: Tim Rulon <timrulon@erols.com>
Message-ID: <372E33B1.29D2@erols.com>
Source record: 109247

Help,

Have an AZDEN PCS-4000 2 mtr VCO which has diifficulties oscillating. It keeps dropping out. I had a second unit which I sent back to factory some time ago. The sypmtoms appear identical so I suspect it is a common problem. The VCO is sealed and potted so I really don't want to get into it any more than I have to. Anyone experience similar difficulties and have a solution? Thanks for listening.

BTW...I had an interesting experience with this unit. The keypad was not operational. Found the conductive material had increased its resistance over the years.

I am pretty new to HAM radio as I have only had my license for about 2 weeks. I was wondering exactly what a wire antenna is. I have a 2meter/440MHZ handheld and I was wondering if maybe I can use a wire antenna on my hand held when I am at home sitting in my room? I have the rubber duckie high performance antenna for when I am out and about. I am very interested in learning if I can use a wire antenna.
Is this possible? I would appreciate any help any one can give me on this. Thank you so much...73 joseph

Wire antennas are commonly used on the MF/HF (1.8-29.7 MHz) amateur bands. A VHF/UHF (2m/440 MHz) wire antenna would typically be several wavelengths long and would therefore have multiple lobes and multiple nulls, which would be undesirable. Also, a horizontal wire would be the wrong polarization for FM (which is vertical by tradition). You would be much better off using a base station antenna designed for 2m and/or 440 MHz, such as a 1/4 wave ground plane, 5/8 wave whip, vertical half-wave dipole, J-pole, etc. Some of the ARRL books have designs for these, or you could buy a commercially available one. There are many models for less than $100. Check places like Amateur Electronic Supply or your favorite amateur radio store. Also, ask around at the local repeater club. Hope this helps.

Now, now....nothing more refreshing than a good, broad, factless
generalization.....

I think a more appropriate analogy would be like a student who wants
to read, write, and program computers to put up a fight against mandatory
Braille. He just has no desire (that's D.E.S.I.R.E. as in want, not 'lack
of intellect') to learn Braille or use Braille. Braille might be useful at times,

perhaps, but not for someone that would rather not communicate that way.
Does this mean he has a contempt for Braille? No, just a disinterest. Let
people communicate in Braille all they want to. Let them do it wearing nothing
but jockstraps. The point is HE doesn't choose to spend his energy on it since
he would like his energy spent reading or writing or programming.

So, how's your braille competency? Oh.. I see...you say you don't know
any braille....hmmmm....gosh you must be one of them thar fruity brainless
liberals, huh?

Exactly.

You'll hear more on an FRG-7 from a RFI-quiet location with a decent
antenna, than you will with a WJ in amongst the powerlines, TV's and
computers of a city.

I have a Icom IC 736 for sale. This unit is about 3 1/2 yrs old and I am the original owner. It only has about 10 hours of transmit time and the unit is very clean. Some of the features for the radio are;

HF-6meters
Built in power supply
Auto tuner through HF-6meters
Never been modified
Dual antenna ports
2 position antenna switch on front panel
Swing meter
100 watts output
Box and manuals

This unit was $1800 brand new, I am asking $950 obo. I am selling out my ham equipment.

see the radio www.uniquelink.com/radio/icom736.htm

Greetings I had initally sold this on E-Bay but the High-and second
high bidders backed out. Not planning on doing business with E-Bay again
I am offering the following COMPLETE Drake HF Station:

1. Drake T4-XC Transmitter 160-10 meters 150 watts good shape
2. Drake R-4B Receiver, 160-10 Meters, Good shape just re-aligned.
3. Drake Antenna Tuner MN-4 Good shape (Matches Drake Style)
4. MS-4 Speaker/AC-4 Powersupply - Good shape
5. Drake TR-4C Transceiver - Fair condition needs 1 tube (6EH5)
6. Shure Desk Microphone and spare crystals for 11 Meter Band as well
7. Reproduced Users Manuals for all of the above.

All this equipment is in working condition and is guranteed no DOA!
You just need 1 Tube to make the TR-4C work.

I am open to offers, the person who gets this stuff must pay
actual shipping costs and it will be packed carefully and Insured.

If your leery of my Yahoo Address you can reach me at my other account
Terry.Bendell@garfield.scbe.on.ca or my home phone of 705-444-7895.

Thanks for your time and 73

2930. Re: Grounding all equipment in shack to single ground bus

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-03 00:00:00 UTC
From: Mike Cox <ki5df@home.com>
Message-ID: <Lk8X2.181$xl.329@news.rdc1.tx.home.com>
Source record: 109295

Rick
Using a bus is not the same as a daisy chain...A daisy chain would be when a ground strap goes from one piece of equipment to the next piece, and then another ground strap from that piece to the next piece, and on and on....depending of course on the number of pieces in the shack...

Hollow copper tubing will work...remember to keep all grounding straps as short as possible....braid is MUCH better for grounding than wire, because of the "capture effect"......you're doing the right thing by setting up a rf station ground....what you are talking about here is a "rf" ground, not to be confused with grounding for lightning purposes....

good luck

Mike KI5DF

HI People:

I have a Mirage B-5016-G 2 meter amplifier that lost its
receive preamp. The active device looks like a MAR series
amplifier. Does anyone know what this thing is so I can
order a replacement?

Mirage has not replied to 3 faxes, and numerous e-mail :(

Oh, BTW, the relays are fine.

Hello

I have noticed that when tuning in 24-32 MHz on my IC706 (first model) with preamp on there are strong scratches from tuning knob in audio signal. Is it a case of bad filtering or is the radio broken.

Thanks in advance

My B3016 did the same thing. An MPS2222 cured the problem. There were actually two of them in the unit, one appeared to be part of the RF sensing circuit, but since I had it open it was easy to replace them both while I was there. You can get these transistors at Radio Shack, they're less than $1.00 apiece.

I am trying to help out the widow of a local ham. Pretty extensive listing of boatanchor/military equipment. Except for the specialty items like Hammarlund, Heathkit, etc., I would like to get offers on groups of equipment for pickup in Paducah, Ky. Too much equipment to ship piece by piece.

Please reply by e-mail to englertgl@pad-uky.campuscwix.net

Thanks for reading the post.

Hello All
I have a heathkit SB 104. The rig needs some work. It needs finals (one could use the motarola MRF 455A Its alot cheaper then the heath original final) 10 ohm bias transistor and the control IC for the last digit in the display. Cosmeticly its in good shape. I'm asking 100 bucs for the rig plus shipping. I'm keeping the power supply for my packet operation and I have sold the VFO all I have left is the rig. BTW the receiver in this rig is HOT! If you are interested drop me a email oris@dirtball.com

AWA M8 (RT-1850) VHF High Band radios

Does anyone know to change the eprom mappings for this radio to make it go down to 144MHz for Amateur operation (at the moment it only goes from 148 -174MHz)

If you know could you send the eprom mapping, or where to get the eprom mapping to Mbilston@hotkey.net.au or Mbilston@Hotmail.com

Thankyou.

From: George Andrews <mauser2@erols.com>
Message-ID: <7gjul0qo1@autumn.news.rcn.net>
Source record: 109309

To All,
I am interested in operating experience anyone has with the ICOM 207H, Kenwood TM-G707A and Yaesu FT8500. My use will be mobile, in a 4WD vehicle. I am particularly interested in cold weather performance, below 25 degrees Fahrenheit. As it is a 4 WD, vibration may also be an issue. I am interested in these units as they have removable face pieces. I know these are not top of the line units. I don't need all the bells and whistles. Cross band repeater capability is of interest. So, if anyone has alternative suggestions, such are welcome. My thanks in advance to all who respond!

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-OLD SYNTHESIZERS (knobs & sliders pref but unnecessary) -OLD KEYBOARDS (1960's-mid 1980's) -OLD DRUM MACHINES (Roland TR-909, TR-808, TR-606, etc) -OLD VOCODER -OLD EFFECTS (anything bizarre / unique) -OLD ANALOG SEQUENCERS (with knobs for each step) -OLD MIDI gear (rackmount synthesizer modules) -any MODULAR / PATCHABLE SYNTHESIZER (ARP 2600, EML-101, System 100m, etc)

Anything by the following manufacturers:

Moog, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, anything similar, especially more unusual stuff.

-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Roland TR-808 Drum Machine
-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer

http://members.aol.com/rolandman1

Please email me privately at rolandman1@aol.com if have anything I might be looking for or know someone who might. Thank you very much in advance and sorry if this message bothers anyone.

**** PRICE REDUCED ****
I have a virtually new FT-736R with both 6M and 1.2GHz modules installed.
Orignial owner, purchased about a year ago, one of the last. Absolute mint
condition and perfect operating condition -- used little. Also has FM CTCSS
module installed. To be sold only as complete unit as listed -- the ultimate
in VHF/UHF/satt radios. Serious buyers only please! Asking $1800 FIRM
(original
discounted retail more than $3000) and has both the owner and service
manuals. - dont want to sell, there will never be another VHF/UHF box like
the 736R but cannot keep the investment waiting for Phase 3D.
Expanding shack in other areas. Free 16 element 1.2 GHz yagi (commercial)
with
purchase!! ($100 original cost). Have original 736 box and packing for
shipment!!! --- SHIPMENT COST INCLUDED!!!
Contact Bob / N6MTU / email: magill@ix.netcom.com --- will call and discuss
with serious buyers.

2950. FS: Kenwood R-5000 ++IMMACULATE!++

Have Kenwood's famous R-5000 in near new condition. Been babied for years.
Has both the AM filters and narrow SSB filter. Was originally configured for
AM
shortwave listening. Works like new and looks like new. Great HAM or SWL
receiver.
One of Kenwood's best receivers! Have manual too!!!!
Asking $700.00. They typically sell for $850 plus in this new condition with
opt. filters.
Reply to Bob/N6MTU ---- email: magill@ix.netcom.com

A bus *is* a daisy chain. The potential a piece of equipment connected
out on the bus sees as ground is modulated by the ground currents of
every other piece of equipment connected on the bus closer to the actual
ground connection. A picture may help (use fixed pitch font to view).

```
x------R1-----x------R2-------x-------R3-----x------R4----Ground

Radio 1 Radio 2 Radio 3 Radio 4
```

Now the Rs are the bus impedances for each segment. The ground
currents for radio 4 will cause a potential drop across R4, so radios
1, 2, and 3 will see an elevated potential as ground. The ground currents
for radio 3 will cause a potential drop across R3 and R4, so radios 1 and 2
will see an even greater potential as ground. The ground currents for
radio 2 will cause a potential drop across R2, R3, and R4, so radio 1
will see an even greater potential as ground. All of these currents
will be varying with signal, so the radios see varying ground reference
potentials which modulate their internal ground references. Add in the
interconnect cabling, and unwanted ground loop currents flow due to
these differences in reference potential.

That causes unwanted feedback, and leads to classic ground loop instability.
This is a classic daisy chain ground loop. It doesn't matter if the equipment
cases are part of the bus or not. It is still a daisy chain, and it still forms a
ground loop because equipment ground currents are shared through a chain
of common impedances. That's a daisy chain ground loop by definition.

The only way to prevent ground loops is to run a separate ground lead directly
from each piece of equipment to a single ground point. That way, no piece of
equipment's ground currents are shared across other pieces of equipment's
ground paths, so there are no ground loops.

I'm not even going to try to draw all the current meshes of a typical station in
order to show this in detail. ASCII art is too difficult for that. But when you do
analyze all the current meshes, you see that it is this daisy chain connection
which is responsible for all ground loop problems. So never use a bus, or box
to box, connection scheme for your equipment grounds. This is one area where
the ARRL books are dead wrong. They show bus grounding as an acceptable

practice. It isn't acceptable practice for any system containing sensitive high gain audio or RF amplifiers, which of course includes every ham station. 99% of the complaints of "stray RF" in the shack are a direct result of failing to adhere to proper single point grounding practices.

>Hollow copper tubing will work...remember to keep all grounding straps as
>short as possible....braid is MUCH better for grounding than wire, because
>of the "capture effect"......

??? Capture effect is a property of a FM demodulator. It has nothing to do with RF grounding. Braid is MUCH worse than a solid smooth conductor. That's because as each strand of the braid dives into the bundle, the skin effect forces the currents to stay on the outside. So they have to jump across the relatively loose mechanical connection between strands in order to do so. This greatly increases the RF resistance of a braided cable compared to a smooth solid (or hollow) conductor of the same diameter (or width in the case of flat conductors). Don't use braid except where a conductor *must* flex.

>you're doing the right thing by setting up a rf
>station ground....what you are talking about here is a "rf" ground, not to
>be confused with grounding for lightning purposes....

A lightning ground is just a *very* good RF ground (lightning is RF). There's more to a lightning protective system than just a very good RF ground, of course, but a very good single point RF ground is part of any effective lightning protective system.

Hi Tedd
The transistor is supposedly an mgf1302, you can get them
from downeast microwave. A simple mod that will help with
thw transistor life and it also brings the noise figure way
down (2 s units of noise the old way, no s meter change
preamp on or off now and it hears MUCH better) is to add a
200 ohm trimpot in the drain lead and adjust for about 3
volts bias instead of 5 volts which is what is there in
stock form. There is a resistor in the drain lead circuit
that can be lifted to add the trimpot (do NOT install it
directly at the drain lead, unpleasant things could result).
I have done this to both my 6 and 2 meter bricks with very
good results.

Ft 50 RH with voice recorder, box and owners manual with the following

accessories included:
1. Pouch Brand neoprene pouch
2. 2 each RH1 rubber cases 1 orange, 1 black
3. Premier speaker mike
4. 2 different types of speaker mike converters (lets you use
standard speaker mike)
5. yaesu filtered cig lighter adapter
6. 2 antennas 1 origina & 1 comet sma
7. AA battery case
8. original 5 watt battery
9. sma to BNC adapter

Radio looks and works perfectly, but has 2 small cracks on the bottom of

the case
I put super glue on them to they would't get any worse. A new case and
this radio would be a perfect 10. I am only selling it because I am
tired of it and want a new radio
toy. because of the cracks in the case I am willing to let the radio
and all the accessories
go for $230 includes UPS ground shipping.

e-mail to spoiler1@earthlink.net if interested

Please, let me assure you, we at ADI do not use "cheap" parts. We have
invested a large amount of money into upgrading our manufacturing
capabilities to include the latest in surface mount technology. Our
engineering staff has done an excellent job of designing high-quality,
low-cost radios, but the lower cost of our goods has nothing to do with the
quality of the parts being used to make our rigs. Our Tawian based factory
offers quality is every bit as good, perhaps even better, than the Yaesu
radios made in Taiwan, the Kenwood radio (which are now made in mainland
China), and the Icom units made in Japan, a fact that our many satisfied
owners will certainly attest to.

Joseph--
Hang tough, keep asking questions, keep your 'twit-filter' on maximum. Unfortunately, to some, the ARS is nothing but an arena to hold their private pissing contests in. To some, if you know more than they, then you've wronged them; conversely, if you know less, you become an embarassment.

Either meet them head-to-head, or ignore their lame commentary.

There is alot of fun and experimentation here; do all you care to and are licensed for. By the very nature of this privelege, you will alienate some folks. Let them pout. Jerks are everywhere, as you have just seen.

Learn what you can, and keep it fun!

73, and welcome to the hobby!

Howdy..I'm "Mike not Mic"!

This radio is in great shape...just had service from Kenwood to include new lithum battery. It's 2m/70cm and you can add another band and make it a tribander.

What I want is: two mobiles 2m/2m or 2m/6m
if you are offering two 2m it must be a combo or one of the following models.

Kenwood 261
Alinco 150
Icom 2100
Yaesu 2200, 2500
Azden (what ever the 50 watt 2m models are)
Or if you have a 6m IE: Azden 7500 or Alinco DR M06th instead of one of the 2m mobiles that will work too.-

All request and replies must come via my e-mail.
Don't get me wrong offers are fine but, don't bother to talk cash!

Howdy..I'm "Mike not Mic"!

In rec.radio.amateur.equipment you write:

>Joseph, Please dont be ofended by my suprised answer to your question about
>what a wire antenna was.

The surprise for me is your surprise! He knew what he was asking
about, but deferred to others, as new guys often do.

There are, of course, LOTS of interesting wire antenna designs
for 2 and 440. The J pole of twin lead is one and I am getting
the info to the fellow about that, as it will easily
triple his coverage over that stupid rubber duck. Further, MFJ
makes little 2/440 tuners that can be used to feed small
long wires, rhombics, etc. It can all happen up there too!

These designs are not canned in the study guides, but must be
derived from understanding the materials, that is where this new
guy can use some guidance.

Nobody accused him of "bad amateur practices", we just said he is ignorant and underserving of an amateur radio liscense. The fact that he wanted to know what "a wire antenna" was, should have clued you a little bit to the fact that in today's culture, ignorance is bliss and will gain you anything you want without effort on your part.

2975. Shure 444 and 522 desk mics FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <XdKX2.1297$9d4.71421@monger.newsread.com>
Source record: 109090

For Sale:

Shure 444 desk microphone. This one is in exceptional shape.
Presently has a 1/4 stereo plug on it (for TenTec and others), but
could be changed to most anything. $ 50

Shure 522 desk microphone, is very similar to the 444, but dual
impedance and I think is also more directional. This one has no
connector on it at present,but most anything could be added.
$ 50

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Butch-- "wire antenna" is a vague term, especially to a newcomer who is full of questions and wonderment. When you first got your ticket, whatever level it was, did you not ask any questions about something you thought was unclear to you? No? You must be Divine. Yes? You don't deserve to be a ham.

Playing the role of the Tech, if a ham mentioned he was getting great performance out of his new "wire antenna", different images may pop into my mind. He could be talking of the random length type common to HF. He could be talking about the kind made from a coathanger and a SO-239 connector. He could be talking about his cell-phone style whip.

"amateur radio liscense"? You can't even spell.

I have been to college, and post-graduate studies. Just because I took a class and passed, does this mean I know everything about the subject? Any intellectual knows that classes and passing tests are only the beginning to any field of study. But I guess that would be foreign to you.

You can go back to beating your wife and/or dog now.

Attitudes and tone like this posting and your other one drive people out of the hobby not into it. THERE IS NO SUCH THING AS A STUPID Q! Please cut people some slack. You could of explained where to look, told him about a jpoles...anything.... but what you did...Pls think.... AND don't you feel silly....ah...why do I bother.....???

Joseph, Please dont be ofended by my suprised answer to your question about what a wire antenna was.
If you go to the nearest Radio Shack store you will find very inexpensive books that explain it all.
Hell I bet if you used your internet connection and hooked up to the ARRL web page you could find tons of information there..... you do know what ARRL means....Dont you?.... Just checking.
Our suprise comes from the fact that you are supost to know what a wire antenna is BEFORE you pass your ham license. It is one of the very BASIC things you need to learn to become a ham and I just dont understand how you could have passed a test not knowing that. Its sorta like passing a driving test and then asking what those red, green, and yellow lights are.

Hi Joe!

I bought the Ten-Tec T-KIT 1209 2m to 6m transverter kit around christmas, and had a blast building it. The instructions are VERY well written, and if you follow all the procedures and test steps, I'm sure your unit will work first time out. I drive the transverter with an Icom 271a all mode 2 meter base. Just make sure when you drive your transverter (unless you are using a handheld) to cut your power way back. Those load resisters will heat up very qucikly. I've made several local contacts with my unit, pushing only ten watts into a Cushcraft A503 fed w/ RG213. I purchased an amp from electronic boneyard, and when I get the power supply built, I suspect I will have even more fun. This 220 transverter should also be all mode, so if you ever pick up an all mode 2 meter unit, you could explore SSB and CW on 220 (if anyone uses it anymore). Either way, good luck!

Joseph the first thing to do is go get some books on Ham radio. You can't really learn anything from the questions you memorized for the test. If you had nothing else to study it is no wonder you don't know what a wire antenna is. Without books to study and learn from you are going to be in sad shape for the rest of your Ham life. I don't understand how you expect to enjoy Ham radio without at least a basic understanding of radio.

Can you post the details about this design? Does it use standard 300-ohm twin-lead? Does it use a balum and if so, can it be easily fabricated as well?

Well when I took the tech test a few years ago I not only had to know what a wire antenna was but also how to figure the length of it for a given frequency. I guess the tests are a lot easier now. Is Butch the only one that knows the useful meaning of "468".

How about you Bogart_1? Did you know how to build a dipole when you took your amateur test or did you just guess at what they were talking about and luck out?

The thing that will kill off amateur radio will not be expecting want-a-bees to learn something about it and earn their privileges (new concept alert!) but giving everyone a license because they demand that they have a right to it.

Perhaps I am just expecting too much of todays hams to be able to understand what a wire antenna is and how to make one so soon after taking and passing a test on that very subject.
Look at the original post. He did not ask how to build one. He asked what it was!!!!! DUH!!!

You guys are correct..... I am really out of touch and living in the dark ages of hamdom.
See you on CW ..... opps I forgot..... that is a dead mode of operation with no value anymore.

Geesh Joseph, you are sure getting a lot of milage out of this one ... huh.

Lets see now.....
You just passed a test on Amatuer Radio and got your license.
On that test were questions about wire antennas and how to make them.
A friend has your only amateur radio book.
So you then come on here and say that you just passed your amateur radio test and then in the same paragraph ask "What IS a wire antenna".
Now you are hurt because you think we we expected you to be a radio guru and treated you badly.

I guess now my guestion is what college are you attending.

It is a sad day when other amatuers dont seem to think your question just a little odd.

Have fun Joseph, and play it for all it is worth and make the most of the attention.
You will find plenty of others here to pat you on the back and stroke injured your ego.
However be warned that you cant fool all the people all the time.

Why is it the cross dressors allways manage to get around to "penis envy"? Seems "Bogart" wants some of mine. Interesting the way some of them faggies get around to asking for a "peek". Your new pal probably needs more than your email address to get up to speed,...or did you just want him to get it up for you?

Looking for non-working or (working if cheap enough) rigs to repair and help outfit some young (high school age) hams Non-working is OK because we will use those to teach theory and repair while the youngster that is gonna get to use it helps repair it. 2M FM preferred as most of the kids we plan to target are either Tech-plus's or wanabe Tech-plus's but anything is appreciated. We are not asking for handouts we are willing to pay(Donations will not be refused though)(Grin). We feal the new hams should have a stake in their rig and be proud of what they paid and what they acomplished in repairing them themselves.

3006. Re: need help!! VX-5R , VX-1R or FT-50

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: Jeff Kamen <n1xui@snet.net>
Message-ID: <7goae7$c00@news1.snet.net>
Source record: 109121
Cross-posted to: alt.ham-radio.mods,alt.ham-radio.vhf-uhf,alt.radio.amateur,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,uk.radio.amateur

all three can do be modified to do MARS/CAP. All are nice radios too. You must decide on which features you want the most. The VX-1R only does 1/2 watt on battery, the 5R and 50R do 5 watts. The 5R has 6 meters, the 50 doesn't.

Joseph, try building your own. A 2 meter J-pole works just dandy,
and they can be built for under $20. Try this site by N4VQT, who
has a great ploan for building a J-pole:

http://cnswww.cns.cwru.edu/misc/w8edu/projects/j-pole;lines=63-196

Good luck,

Bob - KF9YH

Hey Mr. Lee hehehe it would be cool if your first name was Bruce...oh ok onward.

I used the Radio Shack book by Gordon West. It is called Technician No Code Plus.
I am almost positive that it did not mention even once a wire antenna. I remember seeing an old ARRL book at school a few weeks ago in the school library and I said that campers who are into HAM radio like to string up a quick wire antenna out side of their tent so they can make contacts while camping. That idea stuck in the back of my head. As you know I am a student and I am always trying to save a buck or 2 or 3 or...well you know what I mean and I said hmmm I wonder how i could use a wire antenna from my home? That is what sparked the idea to post this question here in he news group. Oh well that is all. you guys can say what you want. I am a HAM For life now!!!!!!!!! Does that make you mad? I hope so. I am going to pursue this hobby until I die. Why? To make you mad? Nawww I love HAM radio. I literally woke up one morning and said I want to learn about becoming a HAM radio op. And that was the beginning of it. My only regret was being so naive. I basically studied the book and took the exam. I figured I will learn as I go along. After all I thought that would make it even more fun. OH I will stop right here.....

joseph

3011. Building Shack- Suggestions?

OOOPs I also forgot to mention that in that same ARRL book I referred to it says that even people who live in an apartment may use a wire antenna by simply dropping the wire outside of their apartment window. That is another thing that really caught my attention. I always had an idea that antennas were these big monstrous metal structures that were installed on the roofs of houses. So the idea of a wire antenna sounds like it would be more in my grasp at this point in time. Thats another reason why i felt like posting my initial question. oh well bye.....73 joseph

3016. Tuning up a TS 520

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: raoul@olympus.net
Message-ID: <raoul-0405992147350001@pt19471.olympus.net>
Source record: 109131

Hi, group:

I bought a TS520 at a surplus shop for a very good price. I sent it in to a reputable shop and had it gone over and replaced the finals. I should be in good shape, huh?

I gotta problem:

This is a TS520 D, which is a domestic version of the TS520. The repair shop didn't see anything really different inside so it should work the same. I have the complete instruction manual, too.

My problem:

The instruction manual is in Japanese and I don't read Japanese or know anyone who does. I was told how to tune it up by the repair shop but, like an idiot, I didn't write the instructions down and now I am not sure just how to twiddle the knobs to get it to tune correctly- I don't want to fry my new finals! There are no diagrams in the manual that could be of assistance and I've looked around the net to see if there were any specific- or even generic- instructions on how to tune a tube final rig.

Can any of you fine people help me out on this? If you do, I'll meet ya on the air!

Thanks and 73,

Jeff, KB7AIL

Last semester I took a Micro-Processor Lab. Our main goal in the class was to build a complete motherboard. Now keep in mind that it cannot compare to what the average computer has inside of it. We used an Intell Family 8088 Micro-Processor. The board required around 24 hours of work to complete. After the board was completely wired up we had to then write assembly language programs to see if what we spent our time wiring up worked. It was a great class as it reinforced the concepts of how the software controls the hardware and that type of stuff. When we built our boards we were required to solder the Power bus and the Ground bus but the rest of the the board was all wire wrapped. Now I must have made around 500 connections on my baord using this 30 gauge wire and now when someone says wire I see this same wire pop up in my head. Now Bogart you really hit the nail on the head. i was just really curious to know if a wire antenna was litterally a piece of wire that you stick to the radio? Well I mentioned that micro processor board I built because..hehehehe...when I hear wire I think of that little flimsy wire I used all last semester. OK bye....73 joseph

Oh yeah Butch and William and anyone else...Please do not think this stuff is making me mad. I really enjoy reading all of the comments. I really do appreciate every comment that is posted. Calling me a homo or something dumb like that does not offend me in the slightest. I am a Christian and I serve God first and I do not let anything a man says to me hurt me at all. The bible says that you should not fear those who can hurt your body but instead fear God who has the power to hurt both your body and your soul in Hell. So you see I serve God with all my heart and I trust him. If you guys are upset with me then that is fine. I know I have done nothing to deserve any rude comments. I have a very clear conscience. I am a very happy Born again Christian. Most people would be mad about being called a fag or homo or whatever but i know that I love the Lord. Just do not ever forget guys that the wages of Sin is Death. I stand by God's word and I live my life according to it. I pray for you guys. I hope that you do not live miserable lives. you seem so mad. Mad about something so stupid. it is very sad. I am a happy person and I am having fun in HAM radio. I hope you guys clear up everything with God before you die. Also keep in mind that nothing you say hurts me at all. If God be for me who can be against me? A couple of guys who are mad at the world? NEVER!!

adios

>99.

Hi Bruce:

I think AES or Burghardt is selling the AT-850 (whatever the number
is for the 850) cheap, like way under $200 or something. I believe
it is on closeout. Kenwood filters are out there on the used
market, and Burghardt and the Ham Station web pages have a bunch
listed. INRAD makes really good filters for less than Kenwood
sells them at www.qth.com/INRAD

I have forsale 3 pieces of Johnson equipment;

Johnson Pacemaker, this radio is untested, chassis is in beautiful condition and originally was a kit. Most of the original knobs are gone save but the vfo and bandswitch.meter and escutcheon are in good shape but cabinet needs some paint. I have a copy of the manual. With a little paint and some time to locate the knobs this would be a very desirable unit. Asking $300
Johnson Valiant, this radio was on the air but got reports of a hum on the audio. Puts out 100 watts. This is a nice unit but also could use some paint on the cabinet. Meter and escutcheon are in good shape and the unit has all the original knobs but missing white inserts. Also a little time invested and this would be a very desirable unit. This was also a kit but chassis in excellent shape. Also have copy of manual. Asking $250
Johnson Matchbox, this is the 275 watt model without the meter. Unit is in good condition except for a fist sized spot on top of cabinet where paint is missing, but with a little time and a can of black crinkle paint this unit would look almost New. Have copy of manual and would ship in U.S. for $125

The transmitters are pick up only in Phila. They are just a little too big and heavy to try to box and ship.

And, just to make the picture a little bigger, nice wire antennas
for 2 meters and 440 can be made from TV twin lead in the form
of the basic J-pole. They work fine, can be made dual band, have
all sorts of gain over a duckie, and roll up to fit inside your
pocket or backpack (I did well from that mountaintop!)

I tend to agree with Ken on this part. I have had an ADI radio for almost two years and have not had any problems with it, except when I dropped it from a higher altitude than any radio is designed to be dropped onto concrete from and broke the LCD. ADI's service to repair and return the unit to me was prompt (about 2 weeks total, unlike 5-6 or more weeks as has been shown on this group for other manufacturers) and email communication was answered in 1-2 days.

I also have 2 Alincos that have performed flawlessly for over 5 years, so I don't think that they have too many quality issues either.

I don't believe that there is any peril in buying these radios.

Just my $.02.

I have an Alinco DR-150 TQ that I am very happy with.
I would be happier if there were a way to expand the
440 reception to cover the commercial UHF band.

Does anyone know of such a modification?

Also, is it just me or is the AM aircraft band reception
not so hot (low audio) with this radio.

What size copper tubing would make a good lightning ground (from a gas-discharge device) to ground? Or would copper wire suffice? (Distance from gas-discharge device to ground rod is ~40 feet)

Well you guys are right. In the book I used to study for the exam there were a few questions in it about antennas :) The only problem I have is that I let a friend who is very interested in HAM radio use my one and only book to study. So at this time i have no other way of finding answers unless I post on this news group. Forgive me for posting this question guys. thanks joseph 73

There is no need to assume anything.
If you pass a drivers license test and then ask someone what a stop sign is
that tell it all.
BTW did YOU bother to read his question..... He never said anything about
'no code'..... I did!
I perhaps may be an asshole.... but you sir, are a Stupid asshole.
There..... see ..... any asshole can call another asshole names here on the
internet.
I bet you wouldnt do it face to face.

William Lee N5WRX
Notice I sign my real name (and callsign) and ISP.
I dont need to hide behind Daja News with an alais.

3051. Yaesu FT-901 DM and other Yaesu items FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <nGFX2.1180$9d4.67962@monger.newsread.com>
Source record: 109209

For sale:

Yaesu FT-901 DM transceiver. 160 through 10 meter,
includes CW filter. AM, FM, CW and SSB. 6146 finals.
Keyer built in, along with just about every other option
a person could think of. This one is in good shape,both
electrically and cosmetically. Manual included for $ 500

Yaesu MH 18 A2b speaker mic. This is the small speaker
mic that fits many, many HTs, both Yaesu and others. $ 25

Yaesu FT-101 crystal for 160 meter coverage. Adds 160 m
to many of the rigs of the FT-101 era that did not include it
originally. $ 10

Prices do not include shipping from Florida.

Thanks.

3054. Re: Kenwood PS-430 Power Supply data needed / use w.Icom 735??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: kg4alg@arrl.net
Message-ID: <QMFX2.15910$Dx6.274585@dfiatx1-snr1.gtei.net>
Source record: 109212

William -

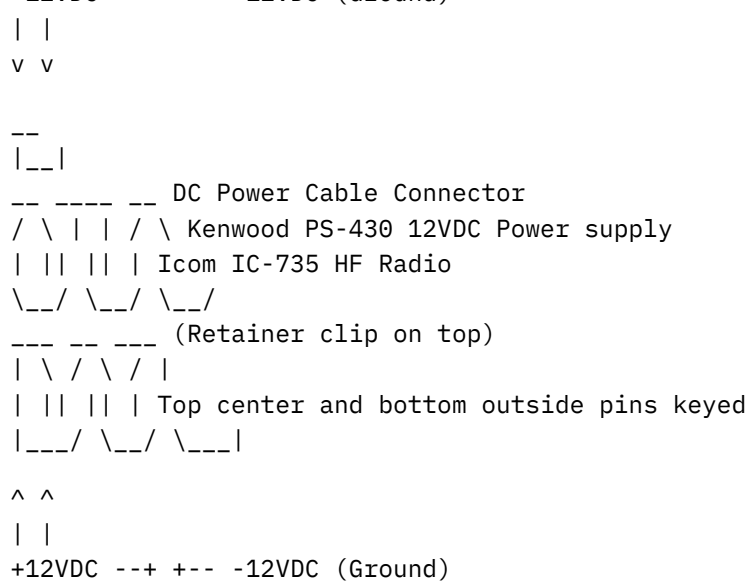
Thansk for help. OK, so maybe you can help me.

1. What is the rated output of the PS-430?

2. Can the output voltage be adjusted?

3. Can you paralle a marine battery across the PS-430 and have it charge?

4. Both the PS-430 and the IC-735 use the same DC connector, but it appears two of the pins are used for different purposes on each piece of equipment. Looking at the HORRIBLE graphic representation below, imagine that this is the face of the DC supply cable connector. The left two pins are +12V, the middle two pins are -12V or ground.



+12VDC --+ +-- -12VDC (Ground)
DC Power Cable Connector
Kenwood PS-430 12VDC Power supply
Icom IC-735 HF Radio
(Retainer clip on top)
Top center and bottom outside pins keyed
+12VDC --+ +-- -12VDC (Ground)

On the Icom HF rig, the right two pins apparently are a dry contact from the power switch to "synchronize" the power supply with the rig (this is an excerpt from the 735 user manual). But it doesn't remotely control the PS-430. However, these two pins are wired in the PS-430 DC cable, presumably to do something. Any idea what? Could it be DC return for regulator feedback? (It's very common practice for hi-current power supplies to measure the voltage output right at the load and adj. output accordingly.)

Many thanks for any input you or others can provide.

Joseph, Please dont be ofended by my suprised answer to your question about what a wire antenna was.
If you go to the nearest Radio Shack store you will find very inexpensive books that explain it all.
Hell I bet if you used your internet connection and hooked up to the ARRL web page you could find tons of information there..... you do know what ARRL means....Dont you?.... Just checking.
Our suprise comes from the fact that you are supost to know what a wire antenna is BEFORE you pass your ham license. It is one of the very BASIC things you need to learn to become a ham and I just dont understand how you could have passed a test not knowing that. Its sorta like passing a driving test and then asking what those red, green, and yellow lights are.

Hi
Ive been hunting around for a molex plug for my ft757gx to attatch for cat use.
I realised that they were impossible to find and came accross a good substitute by accident while upgrading my computer.
The flying leads that connect to the motherboard ie: typically the turbo switch connector (not needed on a pentium) is a 3 pin socket which fits perfectly into the cat socket and has 3 leads.
I hope I have been of help!

It sounded like a legitimate question to me. While there are questions
on antennas on the test, I'm not sure that the subject of the
suitability of wire antennas for VHF/UHF FM use is really covered. There
are areas of theory that are covered but where the practical application
aspects are glossed over or not covered.

I'd say cut him some slack and welcome him to the hobby.

73,
Jeff, KC1MK

Man, you guys are not only cruel, you're EMBARRASING!! Remember, the breadth of radio accumen from Technician to Extra is fairly broad, and because of this, the privileges for each class are commensurate. Tech's are "newbies" and that's exactly what this forum should be for -- discussing ideas and helping newcomers.

If the "Elmers" blow newbies off with elitist arrogance after only two weeks under their belt, they've done a disservice to Amateur Radio every much as great as "lowering the standards for testing" by letting "mere" Technicians have a radio.

Everybody starts somewhere. I applaude Lee, WA8YBT/6, for a straight-forward response to an albiet elementary question -- no brow-beating, no "looking down his nose," -- just an answer, plain and simple.

Amateur Radio Operators are an "endangered species" as it is. We don't have make it worse!

Hey Joseph, I hope some of these guys didn't scare you off by being critical. I'd like to think that most hams do not share their opinion. It wasn't too long ago when I passed my Tech exam (June 1996). I was just as green as you are, and asking the same questions.
Now I'm a General class and an Elmer to guys/girls like you.

The Old Timers of the hobby apparently do not realize that the Tech exam deals primarily with protocol: Rules and regs and proper manners on the air (I know a few Extras that could take a refresher course on that subject). Familiarization of heory and the technical aspects of amateur radio are at a minimum for passing a tech exam.

And what is so wrong with that? Of the dozens of Tech class licensees I know, only a few are satisfied with just working VHF and up. The rest are studying for their Tech Plus or higher licenses. The Elitists in the group are looking at the wrong operators if they're going to accuse the Techs of bad amateur practices.

Anyway, there are plenty of Hams out there who'll not hesitate to help you - me included. You should look into joining a local ARC. I'm sure they'd welcome the new blood.

I have just purchased an old HW-22 with the HP-13 DC power supply. I am looking for a schematic for this unit, particularly the power cable. I need to make a new one as the original was not there.

Any help would be greatly appreciated.

YOU were the one who said no code. That's the point, and that's why I classified your comment as an asshole comment. He may have known or heard about J-Poles, but maybe wanted to be clued in on something he heard as 'new'. His message could also be troll bait.

Driver's license tests and stop signs, huh? A better ARS analogy would be passing his Tech license, and then asking why he can't transmit on say police frequencies. That would be evidence of a failure in the testing system. But I hear many different terms for things, and if this newbie was unfamiliar with a vague term like 'wire antenna' or God forbid he was asking for clarification of what he thought does not prove any level of stupidity to me.

I saw some very helpful replies to his question, but not yours. Give a newbie some slack. I thought that's what the Novice and Tech classes were in the ARS to do...LEARN. Hopefully with help from those more in the know. Questions are never stupid. Actions without knowledge or bothering to ask ARE.

Anybody can be an asshole. Myself included. I did not call you an asshole, but I said your statement was an asshole comment. Because it was. If someone claims the same about my statement(s), I am at least man enough to examine them further.

You are right. Email is easy to hide behind. But that is not my motivation here. And yes, face to face, I would challenge you on this comment. If I make a similar one, and someone else says "Hey, that's an assholish thing to say." or "Why am I being such a dick?" Sure, I'd be offended. But once I got over the 8th-grade emotion of it, there might be some validity to their reaction.

BTW, show me a ham that knows the answer to every possible question about Ham radio. Hmmmm....guess we're ALL "Stupid Assholes"....

Another BTW....my ISP can't seem to fix their mail server. For weeks! Therefore, I am on DejaNews till they fix it.

Til then, I am incognito.... :) I am on the QRZ CD-ROM. With a little smarts, you could figure out which Ham I am, Dr. Seuss...

3067. Re: A wire antenna??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: Joseph Merfalen <jmerfale@engr.csulb.edu>
Message-ID: <372F42AC.1C282F47@engr.csulb.edu>
Source record: 109225

Thank you very much for the input. I whole heartedly agree(Sheeesh is that how you spell heartedly?) well if I misspelled that word I am grateful this is not the rec.english.spelling newsgroup if the newbies in that NG get treated like the newbies in this NG get treated. Oh well. As far as having known what a wire antenna is before I took the exam goes I am sorry to tell the previous mean people that the book I studied did not even mention the idea of making an antenna out of a piece of wire. That is why i initially posted this question. it sounded like a cool idea and I simply wanted to learn what it was. And yes to the gentleman up there who asked if I knew what the ARRL was. Do you think you can be anymore of a JERK?? Probably. Sheeesh I feel sorry for your wife and children. I am simply trying to learn as much as I can about thishobby as I can. Right now I am a full time student and a lot of my time is spent studying for classes. In the little spare time I have I like to learn about my new hobby. It is something I enjoy so much. You know guys I have taken a lot of math classes in the past few years. A lot of my friends know that and when they come to me with a question about a math problem I am always happy to help them out. I dont say things like "You mean to tell me you are taking this math class right now and you don't know how to do this problem?? blah blah blah?!?!?!" No in fact I do the exact opposite. I explain the procedure and I am as helpful as I can possibly be. Forgive me for not being the HAM guru. Like I said earlier I took the exam approx. 2 weeks ago and prior to that I studied for about a week. I am knocking myself over the head right now because I am not an expert. Or maybe I should knock myself over the head because I thought I could get some kind of help from the people on this NG. Like I said in an earlier post I gave the study book to a friend. I did not memorize every single line in the book prior to lending it out. I count on the people in this NG for help. I believe what the Bible says when it states "Do unto others as you would have them do unto you". I guess that is why when a person asks me a question I am as helpful as I possibly can be. I do not go nuts because it is something that the person should know. Oh well guys I understand that some of you have been HAMS for 20 or so years and these questions are beyond you guys. Please forgive me again for my initial question.

I am sorry but i really do not understand what is so amazing about what I asked.
Dude you have problems. And your analogy about the driving test thing is not even accurate. It is like asking a person who just got their drivers license if they know what a tuck and roll is? That would be more accurate. Do you really expect a newbie driver to know what that is? I want you to ask yourself this William..did you know what a friggen wire antenna was BEFORE you got your license? I mean yeah it is a wire that is used as an antenna I know this but I was seeking some specifics on it. I know you are probably sitting there saying "Heck Yeah I knew what a wire antenna was" Of course you did sir.
Of course the all mighty William knows all. if I wanted to be told I was stupid I would have gone to rec.replys.that.are.meant.to.belittle Hey William thanks for absolutely nothing..... 8P

Bill,
The "15" indicates units that are shipped with the DSP board installed. Units
without the DSP installed are known as "5". The 5's are being phased out.

It means the DSP unit is already installed at the factory. They had many MKII's that were sold without the DSP installed and the factory was sending them as they became available. There was also a $30 incentive to buy those units and receive the DSP module later

3075. IC706 AMPLIFIER INTERFACE WARNING !

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-04 00:00:00 UTC
From: mf_luder@my-dejanews.com
Message-ID: <7gm0et$e7f$1@nnrp1.dejanews.com>
Source record: 109263
Cross-posted to: rec.radio.amateur.swap,rec.radio.amateur.equipment

WARNING ! The QST review of both the 706 and 706MKII identified a full power 100 watt spike at the start of reduced power transmissions. These should be used with EXTREME caution unless you want to fry the input circuit of your amp !! It is NOT as cut and dry as he portrays.

IC706 AMPLIFIER INTERFACE

My new ICOM IC 706 amplifier interface plugs into the accessory connector on the rear of the 706 and provides a phono jack to which you can connect a cable to your amplifier relay. The interface can key any amplifier with DC antenna relays (the only one I'm aware of with an AC relay is a Collins 30L1 and I'm not sure there's) any problem with that either!). The interface incorporates a reed relay with a 250VDC 1 amp contact rating. Only $29. plus $3 S&H

Order from Jack Schuster, W1WEF, 408 Thompson St, Glastonbury, CT 06033

Source record: 109264

My new FT-51R did the same thing just a week ago. It reverted back to Euro band limits (146-148, 440-450). I called Yaesu support. They walked me thru the band-limit mod (power off radio; hold vol-up + vol-dn + call + power, hold FM til "FM" blinks, MHz up or down so that "BAND 0" changes to "BAND 1", FM, call & radio shuts off). This is same mod that makes it "appear" to run on 800MHz (but US radios apparently don't have circuitry). Trouble is, new radios can't change without removing solder bridge 4 and 7 inside. These are documented at www.qrz.com. It's UGLY! The only option is return to Yaesu for warranty (or out-of-warr.) repair!!

In article <7e1i9c$m40$1@nnrp02.primenet.com>, cracked@primenet.com says...

Don -

Don't mount it out of near dead-on viewing angle! The off-axis visibility is horrible on the TM-V7! Mount it so that the display is shaded from sunlight as much as possible, because the display will wash out like a laptop PC in sunlight. The worst situation is reflected light on the display. Even with the anti-glare matte finish and polarizing filter, this situation makes ht edisplay invisible. I like the radio, but the display is terrible for a mobile rig. I wish KW would retrofit the blue display. I have not heard any owner say kind things about the display in a mobile environment.

Can't speak of power or EMI probs. I have an old '86 Pont and it works fine, save for occasional ignition noise over weak stations.

Bill;
Neither. There are some MKII's where you install DSP. (.05??) and the .15's=
DSP installled. See HRO's web price, they explain it as well. Same radios-$30.
difference.

So do I understand it right?....
To use this high dollar radio you first need to have a high dollar PC hooked to it?
This is a GOOD thing?

Well let me ask you this....
Since the computer is all attached to the radio, can you do RTTY and CW from the computer keyboard and screen?

A little further up the list you will find a new ham who just got his no
code license.
He wants to know what a wire antenna is.

First comes the NO CODE license quickly followed by the NO BRAIN license.

I wonder if "lack of intelligence" can be used to get a medical waver for
the CW test.

That's ok we can argue all we want about keeping the code test, but something needs to be done to bring people into amateur radio not keep them out. Soon enough all the brass pounders will be gone and then the FCC can sell of the rest of the ham spectrum. How soon we have forgotten about 220 MHz.

Agreed! I paied $250 for mine a couple of years ago and, from what I've seen, that is the going price. If it's clean and works well, $200 is a good price.

3094. Piss-poor ICOM W32A performance

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-05 00:00:00 UTC
From: Neal <neal@sacon.net>
Message-ID: <Sd8Y2.4662$bV5.143078@news7.ispnews.com>
Source record: 108982
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

Its probably not unreasonable to expect a W32A to perform as at least as well as a 15 year old Knwd TR-2600A, but mine does not:

1. Low transmitted audio. I didn't really believe it 'till I loaned the radio out and heard it myself. Its embarassing. The TR-2600A audio is vastly superior - people can actually hear what I'm saying;

2. Substandard receiver performance on VHF. Side-by-side, a repeater which is full quieting on the TR-2600A is 80% noise on the W32A. Yes, I swapped antennas. Same result. I've also opened the unit up and checked the ant-to-board connector. Solid.

3. The radio goes deaf when connected to an external antenna. I've heard about the strong-signal attentuator, BTW, and I thinks its BS because: Some people have been thrilled with the W32A perf. with a mobile antenna and some people have also had the thing go deaf; I've tried antennas with various levels of gain - same result. By comparison, the TR-2600A loves a mobile ant.

4. The receiver perf at 108-133 mHz ain't too good either, which I sort of expected, but not quite as bad as it is. I need to be within a 1/4 mile of the transmitted signal to hear anything. Not a problem unique to PDX - same experience at SFO, DFW, IAD, BOS & etc.

The purpose of this post is to:

4. Leave a note for posterity in deja news;

5. Elicit feedback. Lay it on me.

I'd send the thing to ICOM for repair *and* buy another one if I can get convinced that the above are device failures and not design flaws. I'd rather not get a new one to compare it too and find that I'm stuck with two dogs instead of one.

It does sound odd out of the context of his total question. Seems he wants to know if he could use a wire antenna for his 2M radio and if so, what would be the advantages over his rubber antenna. If he has no experience building and experimenting with antennas, and has only read a limited amount of antenna theory, sound to me like a legit question. He's obviously new to the hobby, and it takes some people time to grasp the antenna principles.....W4UDX

Steve -

I sent you a rather polite note suggesting that you should not spam the
rec.radio.* groups. Of the groups this was sent to only
alt.ham-radio.marketplace and rec.radio.swap are appropriate for sale
postings. While the others are becoming overrun with spammers like you that
does not make it right. REc.radio.amateur.equipment in particular has become
nearly useless for its intended purpose, the *discussion* of radio
equipment. Crossposting sale stuff to multiple inappropriate newsgroups is

spamming. Please see the charters for the groups, or see the "Guide to the rec.radio usenet groups" or some similar posted monthly by Jeffrey Herman on about the 15'th of the month. If you can't wait do a lookup at dejanews.

In the meantime, please use the groups for thier intended uses. In particular rec.radio.amateur.homebrew is a discussion group, as are most of the others you are posting to.

Hey, thanks for all the replies especially on the grounding issue I had almost forgotten about that.... Since this shack will be on the second floor I guess I should run copper strap for the ground as it will be over a 20ft run I suspect. Do i also need to run a seperate ground for equipment chassis connections?

Here in California, all homes built within in last few years have what is called a "Ufer" ground. A "Ufer" ground is achieved by bonding the main service panel ground to the rebar in the foundation. (Before the concrete foundation is placed, a piece a rebar is placed so that it protrudes from the stemwall directly below the panel) We DO NOT install ground rods anymore in new construction, This is per the NEC. Now, I have always felt that the Ufer ground is inferior to the good old copper clad steel rod especially for amatuer radio applications. I am worried that I will create a problem by running another equipment ground independent of the rest of the house. Since the new ground path will be via ground rod, won't I create a current potential between the the two ground paths? (I remember a similar problem with a token ring network I was involved in installing where the ground potential btween the two buildings being connected was sufficient to disrupt data transmission.)

BTW, "Ufer" is some guy's name, and I have heard the whole silly idea of grounding to the rebar originated in Arizona where the earth is so dry, even copper ground rods had poor conductivity, the "ufer" theory holds that the concrete in the foundation stays moist forever thereby yielding a better ground. Can anyone confirm this? I have asked several building inspectors, and none seem to know the answer.

'73 and thanks again for all the tips

Bravo - usually use the analogy of calling CQ in CW on teh SSTV frequency,
but I like your's better.

> That's your opinion. If I see an ad and don't have need for the item, I
> cruise right by it. Why not read the items of interest to you and
> ignore the rest?
>

> Dave K8MN

Maybe so, but the charters for these groups was set by a democratic process that involves a call for discussion, a discussion period, and then a vote, where there must be 100 more votes in favor than against, as well as a certain number of votes total to create a charter for the group. If you wish to change the charter feel free to go through the formal process to get things changed. Subscribe to news.groups if you would like to understand how the usenet groups are created.

The forsale folks filling up the rec.radio.* groups seem to fall into three general groups:

(50%) those who didn't know that rec.radio.swap is the place for sale items, who are happy to post to the right group when they are informed.

(25%) those who do know, but feel that whatever they are selling is such a good deal, or so interesting that it should be shouted in all the groups and

(25%) jerks who don't care about anything but peddling their stuff.

I'll leave it as an exercise for the reader to place "pink" in the proper bucket.

As for just skipping over the sale ads, this doesn't work. When the sale ads are 3x the discussions that the groups are designed for the discussors stop reading and discussing, because there is too much clutter to wade through. Rec.radio.equipment is an example; it is hard to find any discussion left there, but there are plenty of duplicates of rec.radio.swap postings.

Let's work together to keep the newsgroups litter free.

I always thought they were more like little pimple things...cuz they're
'outies' instead of 'innies'.

BTW, isn't it odd that they have Braille on a drive-up teller machine? :)

Greetings,

I am interested in doing packet/rtty transmissions.

I have been looking at Tigertronics BP-2M. Does anyone know anything
about it? Can I do all the modes like KISS, etc? I will be hooking it
up
to a Yaesu VX5.

Can someone point me to RTTY, packet, KISS faq?

thanks and 73

I sincerely hope you do pursue this hobby Joseph. There is so much to do, so many rewarding things to do, different modes of operation, or building from scratch or from kits. Even the simple little kits like a keyer, or a sstv interface to a sound card. It is wonderfull! BUT, when you get your Extra Class Ticket, don't get on here and ask questions that you know you should know the answer to.
PS: there is no such thing as a No-code Technician Plus. If the book included the Tech Plus study material, you should send it back to Gordon "steal their bucks" West because it is an incomplete study.

3108. FS Elecraft K2 HF QRP Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-05 00:00:00 UTC
From: Simon Lewis <slewis@pacsat.demon.co.uk>
Message-ID: <+fXfrJAj7FM3EwyR@pacsat.demon.co.uk>
Source record: 109031

For Sale

Elecraft K2 HF QRP Transceiver.

Compact 10 watt HF transceiver with many amazing functions. Digital display, scanning, memories, built in memory keyer, 12 volt powered.

Built in test and alignment equipment and test/alignment tools provided.

This was built from a kit from Elecraft for review purposes only. It has only had a few hours use on air and is in mint condition. It is professionally built and not just thrown together.

For more info on the transceiver and its features see www.elecraft.com

Price is 550 USD plus carriage - this equates to the US price in UKP - so the prospective buyer is getting it cost price for a brand new imported kit - ready built (takes 50 hours approx to build!)

The K2 has many options but this is the bare 10 watt CW unit. The SSB unit is available shortly. A 160 m option and variable threshold NB units are also available, as is a built in battery for true /P ops. A hi power 100 watt PA and auto ATU will also be available soon.

If anyone else would like some info please email me or take a look at the website.

3110. HELP: FT-847 Power Control

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-05 00:00:00 UTC
From: "Christopher W. Buckley" <cwbuckle@mtu.edu>
Message-ID: <7gpqje$r98$1@campus1.mtu.edu>
Source record: 109033

Hi all,

Our club is looking to purchase an FT-847 for the shack, but we have one major problem. We have two 30in / 100out Amp's, one for 2m, and one for 440. From past experience, we've learned that if someone *Can* overdrive those amps, they *will* overdrive those amps. 50W is just a little too much power, and we need to figure out a way to reduce the output on those two bands. We have considered putting some resistance in-line with the power knob, but that would also reduce our maximum power out on HF and 6, which we don't want. We would also really, really, like to stay away from attenuators.

Does anyone know of a way we could reduce the power on those two bands, without having a negative effect on the rest of the bands? If there were some sort of modification we could do, or even just adjust a pot somewhere, that would be best, but any suggesstions are appreciated.

$200 for a R1000 in decent shape is a good price.Your "analog"
receiver,if it was general coverage,was probably the R300 (approx $75
today) or a QR666 (approx $50).

It must be some backwoods cracker initiation number, perhaps related to a crude approximation of the propagation constant expressed in archaic Imperial units of measure. Since the tests use SI units, as does any self-respecting engineer, the number 300 might be of greater use to someone interested in antennas.

That is one millionth of the square root of the ratio of permeability to permitivity of free space. As such, dividing it by frequency in Megahertz will yield wavelength in meters (a sensible SI unit). Divide that by 2 to get a halfwave, or divide it by 4 to get a quarterwave, then subtract 3% for end effects of a thin wire conductor, and you have the length of a practical wire dipole or quarterwave whip.

Of course if the length to diameter ratio of the conductor you're using is less than about 1000:1, you'll have to calculate the end effect shortening exactly instead of relying on the simple thin wire approximation. I'll leave that as an exercise for Butch and William since they are so obviously knowledgeable of these simple basic concepts.

3115. ICOM 706 and Heil Headset

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-05 00:00:00 UTC
From: wpeloqui@ismi.net
Message-ID: <7gq0tduds1@nnrp1.dejanews.com>
Source record: 109038

Hi,

I purchased a Heil headset a couple months back and have been unable to get any audio from the mic element. I called Heil and they sent me a new amp to try out. I tested the headset on my sound card and I do get mic audio there. I measured the voltage on the mic plug and only measured 6.8 volts, not 8 volts.

Here are my questions:

Why would I get 6.8 vs 8 volts? Is this normal?
Should the amp work with 6.8 volts?
Has anyone else had a similar problem?
Does anyone have a solution?

Thanks,

Willie

>So do I understand it right?....
>To use this high dollar radio you first need to have a high dollar PC hooked
>to it?
>This is a GOOD thing?

Yes, it is a very good thing. Of course it isn't a high dollar radio, and you
don't need a high dollar computer. Compared to other radios in its class
(and there are only a couple of military/surveillance radios that qualify),
it is cheap. And compared to a high end workstation, the sort of computer
you need is a simple consumer appliance like the one you use here.

>Well let me ask you this....
>Since the computer is all attached to the radio, can you do RTTY and CW from
>the computer keyboard and screen?

If you like. Kachina gives you the full radio API, so you can write any program
you like to utilize it to its fullest capabilities. They will also tell you how to
write and upload your own firmware to the radio, so you can alter the way
the DSP functions in modulating, demodulating, and filtering your signals.
Thus you can generate and decode any arbitrary signal constellation that
you are smart enough to write code to implement. This is the most versatile
radio I've ever seen, and that's primarily because of the intimate relationship
it offers with a common general purpose computer.

Nice try, asswipe. I am sure you are real good at "backing out"; however, as you have posted for all to see, you made reference to Joseph and myself engaging in your type of perverted activity; that of homosexual acts.

I think you owe Joseph a serious apology, as well as one for the newsgroup.

You are seriously confused; Joseph posts a question, and instead of a helpful answer, you pose insulting questions back to him. For some odd reason, you think a question deserves another question. Here's some help...these are things that go together: Question-Answer Man-Woman

You have it this way:
Question-Question
Man-Man

Get help!

But, Gary, if you wanted the mother fucker in feet you would use 468 now wouldn't you. The number 300 would be a point of contention between a pseudo physicist/definite asshole and a "backwoods cracker" like myself you see. And the "backwoods crackers" giving the tests (VEs, thats Volunteer Examiner for pseudos and definits) just may rise up against which number is the usefull in knocking out a fast dipole. the number 468 has nothing to do with propogation constants you dumb prick. If you have administered an examination show me anywhere in the q.pool anything that resembles an si unit what ever the hell that is anyway. 300 is really handy in calculating the wavelink knumb nutts, but most will never have a real need to know except for the examination questions.

Now, go back to playing with yourself.

Magee

3122. Article on Converting UPS for Ham Use?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-05 00:00:00 UTC
From: windbrkr@erols.com
Message-ID: <MPG.119a584059d75b3e989711@news.erols.com>
Source record: 109045

I recall seeing an article on rescuing a defunct PC uninterruptible power supply (UPS) so that it could be put to use in the shack as an inverter, battery changer and DC power supply. I *thought* the article was in QST sometime last year, but my memory is apparently playing tricks on me (again). I can't locate the article in back issues of *any* ham/electronics magazine, not to mention QST.

Does anyone remember where/when such an article appeared? I don't think I just imagined it, although I am beginning to wonder a bit...

Thanks,
Bob K9CMR

Anyone tried this Vlaski mod software? Does it work? Would it work with a series 8x version of FT-50?

Where I live on the 2 meter band there is a frequency that is just full of guys who are cussing and saying the most filthy things all day long.. I always thought that HAM radio was a family type hobby and that obscene language was never ever to be used on the air by a HAM. I am wondering why the FCC does not crack down on this situation? It is really very shameful. Is it due to the fact that the FCC is way to busy to stop and monitor what is going on?

Hi. I have a Kenwood TH-79, and use their PB-32 battery packs with it. I just got the recommended KSC-14 rapid charger (listed under accessories). However, the battery does not fit in the charger well; the well is much too large, and the battery just rattles around in it. Does this charger need an adapter sleeve or something? Any help will be appreciated. Thanks.

I use MAHA FBN-47 NiMH packs daily on my FT-50 and Vertex VX-10 HTs. 1800mAH rated. Couple these with Maha's MC-C777a Universal NiCd/NiMH Charger, and you are all set.

Get one FNB-47 and a charger, and Ham Radio Outlets nationally waive the UPS shipping fee (on orders over $100.00).

I have for sale in excellent condition an ICOM 737A HF rig. It covers 10 to 160 meters plus it is general coverage....Has a 100 memory channels, built-in tuner, built-in keyer......The output power is 10-100w on ssb,cw, and fm...On am 10-40 watts(continuously adjustable).....I have the power cable, manual, but do not have the box.....Also there is no microphone.....I will take $675 plus shipping.....If you have any questions please feel free to call for more info.....I can be reached at (508) 821-2993 or e-mail.....WZ1U Steve / Lakeville, Ma.

Use some copper strap to go out of your exterior wall nearest your
operating/equipment position. DO NOT run it laying on any part of the cement
foundation; that makes an excellent "choke" on the ground line and when you
get a significant lightning strike it blows the daylights out of the cement
where it touched and dissipates the remainder of the surge too slowly to
protect much.
Also, as for your 2 inch piping for coax, I'd advise no smaller than 4
inch. Use flue pipe for the duct (single wall). When putting this together,
do it so as to make the inside flanges face the operating position so that
the coax will slide over the sharp edge instead of shaving your coax jacket
when you pull it in from outside.. Like I said, at least 4 inch minimum and
larger if you can get away with it. You'd be amazed how fast it will fill up
with cable. (Who called this hobby "wireless" anyway?)

Now that's about the best dialog I've read on this subject! My close friend was a tech writer then salesman for WJ and he has told me that that receiver is mediocre, at best. He said one Fed agency got fed up and bought Icom R72's (?). Look very hard at the construction, then look at the "competition". It's dramatic! Maintenance is a nightmare as is the cost of replacement parts. He has one but its sits there, covered with dust!!

Boy, am I ever envious. I hope to do the same thing some day but for now I just dream about it.

I would add two things;

Big hole in the wall to run cables in/out. Dress it up as you please.

Big ground, electrical and RF. Lots of copper strap and the like.

I would put in a couple of more 115VAC 20 amp outlets along the workbench for soldering iron, scope, etc.

Don't forget to set the operating table out from the wall a couple or three feet so you can get to the backside of equipment while it is in operating position.

Can never have too much lighting, both room lighting and task lighting.

Source record: 109137

A friend has the original 706. I have the MKII. If I was to buy a new one--it would be the Icom. Here is why: #1--I already know how to use it. 2, there is more information displayed on screen, 3 more buttons on the face, 4 it is bigger, 5 I think my filters will fit the G, the DSP in both are overrated--it really does not work as well as thought and it does not really get rid of vehicle motor noise very well--you still need a quiet vehicle, 6, the Yeasu is almost too small for mobile and with less controls up front it is harder to operate (I spent a good month with the 706MKII in the shack before going mobile just to get familar and get it dialed in) 7 I use the 706 mainly for HF so all the memories really don't mean much. I ran an Icom 735 mobile for years and it only had 12 memories and I hardly used those! 8. Heat sink 9 mic jack on the face of G, 10 speaker jack on face of G. Both of these make it easier to use a Heil headset for a long trip and then switch back to a hand mic for local short trips and contacts. 11 I already have a DTMF mic from an Icom dual band rig that works. 12 Don't put all your eggs in one basket--I still need a dual band for local talk while working HF at the same time. You can be parked on say the County Hunter net or chasing rare DX while still rag chewing local on 440 or 2m and when it is your turn, just switch mics. You can also get DX spots from local nets while mobile, I think with both rigs you can only listen to one band at a time. I think they both x-band repeat which may be neat.

Overall, I think Icom has learned well from its past 2 and likely got more right with the G than Yeasu may have with it's first attempt. I wonder what the FT-100A will bring? Hope I have been a help. Rudy

Ed,
about that 12 volt battery across the power supply!!
DON"T do it... at least not without some sort of blocking diode. with a battery across the output of a supply like that if you turn off the power supply or the AC fails the battery will forward bias the pass transistors and destroy them. that makes an expensive battery charger.

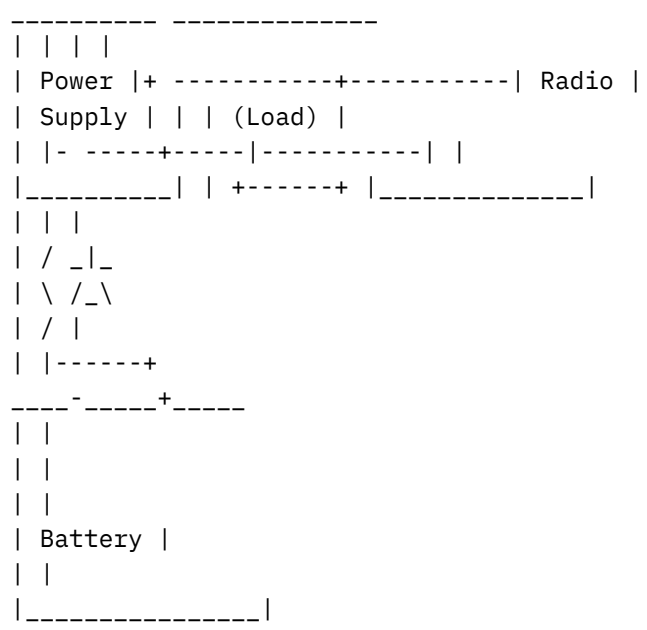
Message-ID: <8kOX2.16860$Dx6.335592@dfiatx1-snr1.gtei.net>
Source record: 109144

Don -

Thanks for the tip. If I remember right, the blocking diode goes the other way though, as shown below (Please forgive the lousy graphic). The function of the diode is prevent unlimited charge current from the supply into what might be a fully-discharged battery (which would look almost like a short-circuit to the power supply). Charge current is limited by the resistor, but when the power supply ceases to provide power, the diode forward biases to pass current to the radio.



If the pass transistor is bipolar (i.e. NPN or PNP), the polarity should be such that current flows toward the load, but not back into the supply from an external source. Although there might be some other path through regulator, overvoltage sense, or similar circuitry that might be subject to the damage you suggest could happen. And you're right, damaging this supply with a battery would be an expensive charger.

But I've seen many Astron and other generic supplies trickle charging a paralleled battery in this manner. I even have a tech tip from GE showing how to do it with one of their commercial radios.

Now, could anyone supply some real numbers for this power supply? The PS-40 is a switch-mode unit rated at 40A ICS, the PS-52 is rated at 22.5A continuous, and the PS-52 is rated at 20.5A continuous. What are the PS-430 specs, and why is it more valuable on the used market?

In article <19990504220303.19920.00002200@ng-fw1.aol.com>, n0dg@aol.com

From: TLNixon@revealed.net
Message-ID: <372fc699.20969013@news.revealed.net>
Source record: 109146

Okay heres the scoup!

The leads on the VCO Coil itself are soldered to the circuit board.
Apparently they stuffed the parts onto the board, then filled the VCO
cavity with wax, and then flow soldered the board. Of course the heat
melted the wax slightly, and some ran down into the connections to the
vco coil and associated components.

Cure?
After probably a dozen or so failures, I used a hair dryer to melt the
wax out of the VCO Box, and inverted the rig, catching the wax to
reuse it.

I then de-soldered all of the compoents in that area under the VCO
box, and then cleaned the board and leads with spray
cleaner/degreaser, and a toothbrush, scrubbing it well.

Resoldered it, and haven't had another problem yet.

Simply resoldering the VCO Coil leads themselves didn't solve my
problem.

Joseph, stopping here is a good idea, but for some reason I can not leave this one alone. Folks, lets look reasonably at this situation. A new commer to the hobby asked a question that was meritorious of a valid response, and Mr. Lee had to start with his crap and blow the whole thing way out of proportion. Gew wiz, I am glad I didn't ask for plans for a roll-up J-pole from 300-Ohm Twinlead!!! I guess asking if you need a balun (which I learned about to become one of those stupid, worthless no-coders that everybody loves to hate) would be out of line! O can not believe all of this resentment. I memerized the answers to alot of the questions and hoped to learn a lot more later. I purchased the ARRL handbook (Which we all know what the ARRL is to respond to an earlier post) I often have to ask questions of friends or post them on the Internet in order to learn because I don't always understand the material. I am a college-educated individual, but my degree is not in RF engineering, and I hate math. I am sorry that all of us new commers have to ask questions of experienced people. Hopefully some day I will learn the code so that I will be worthy to ask questions. I look forward to working all of you that have insaulted the masses who are Technician class operators (What is a no-coder by the way I have seen no such thing in Title 47, CFR, Part 97) on your Marconu Spark Gap transmitters.

Ta Ta All,
I hope I have the ambition to pick up a transceiver after reading about how some of my fellow hams feel about people like myself who have no "real" ham interst (as they would like to believe.) The fact is that I am very interested in radio, but am not very good in electronics. The purpose of the Amatur Radio SERVICE is to gain electronics knowledge. I have gained some and will continue to gain some as long as I meet up with people who are willing to be "elmers" rather than waxing nestalgically for the day of Marconi.

Hello all,
I have a Dentron Clipperton L forsale. It has new
572b's, new band switch and all of the Capacitors and diodes
have been replaced. I have schmatics too. The amp is wired
for 220 with 100 watts drive 1200 watts out on 80-meters.
The band coverage on this amp is 160-15. I'm asking 500bucs
plus shipping. If you are interested drop me a line. You
can see a picture of the amp as well as my station by clicking
here. http://www.dirtball.com/station.html
73 and thanks for reading

You got it all wrong Joseph.

I am not mad at anyone.
In fact I feel a little sorry for you.

You did not ask about building a wire antenna.
You asked what one was.
There is a big difference between the two questions.
Now you are acting like a child.

Five posts from you within about one hour shows your true intent.
You need to spend more time studying ther at school and less time here.

BTW: Dont put words into my mouth.
Go back and read my posts and you will find that I have treated you with all
the respect that I would expect to get from from you.

Ths thread has become a bore so .... good buy Joseph, and good luck with
your new hobby.

I had one years back and it is a very good demodulator for rtty. It
was made to work with the Comodor 64 computer. Some of them have a
rs-232 plug on the back that will interface with a serial imput.
There was an artical in 73 Magazine about how to interface it to a
rs232 port if the jack on the back is missing. If you want a good
rtty demodulator, go after it. You should be able to find some old
rtty programs made to work with it on the ms-dos computers.
Search for the RTTY Loop on the internet and see if it is still
around. There might be some info there.

Adjust the drive, and dip the plate.
If you don't have experiance with tube finals, it might be a good idea to
go through a few old handbooks to learn WHAT you are doing, not how to do
it.
While 6146's are somewhat forgiving, tube finals will not put up with
mistuning,
long key-downs, poor antenna tuning etc.
If you peak the grid (drive) and dip the plates, and something does not seem
quite right... you may destroy it before you figure out that you are plugged
in
to your 2 meter antenna by mistake.
Regards....Dave

WBG -

Have you considered some copper mesh (Farraday shield) for Tempest qualification? (:->)

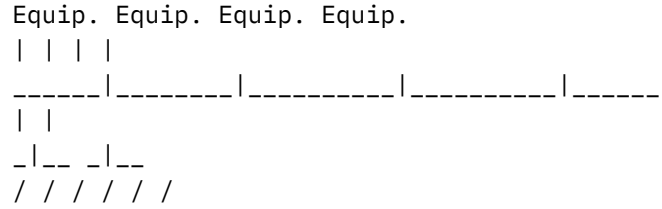
Seriously, ground, Ground, GROUND! You need a solid electrical ground and RF ground. Each is a different issue.

Your RF ground should be located as close as possible to the shack itself, with as short and as heavy a wire as practical (like 4AWG stranded or a braided strap). This is necessary for any antenna which radiates relative to ground (e.g. verticals). This is also going to be the primary return path for lightning strikes from any exposed antenna, so it must be heavy-duty. Another post mentioned welded rather than mechanical joints. I would suggest at least solder joints for the major connections.

Electrical ground is for safety's sake, and runs to the same ground point that the electrician bonds the electric service to. Electrical ground wires are expected to carry only 60Hz power, and the NEC recommends one AWG lighter than the current carrying conductors (e.g. 30A service requires 10AWG, ground for the circuit can be 12AWG).

Ideally, the two should be one ground point, but this isn't always practical, since Sparkey the electrician will want the shortest path from the service entrance to the electrical ground. If they are markedly different locations in your house, they really shouldn't be bonded together either, lest ground loops form.

Now you would think, "the more connections to ground the better." But the only time this is prudent is when you can tie multiple ground points together, then fan them out to things that need grounding, without any duplicated (or loop) paths. You can make sort of a "buss" arrangement, like below.



Sorry to sound like a college prof., but in Florida, lightning is a big deal, and we learn quickly about protecting our lives as well as our equipment! Congrats on being able to design a shack before construction is completed.

I finished my "shack" about two years ago, and did much as you have described for the electrical rough in. Now I'm sorry that I never had many, many more plugs. I had installed 6 duplex outlets at the operating position and 4 more at the workbench. Now I have power bars screwed down everywhere for the additional equipment. Also, at the operating console, consider placing several plugs about a foot from the floor, another string at the height of the console and a third set a foot or so above the console (for the second stack of gear). I also now wish that I had put in a couple more phone jacks near the workbench, and provisions to "patch" some antenna feeds over to the workbench from the operating console. It's a pain to have to undo antennae from the rigs to use it on the workbench; switching would be much nicer. Grounding is big. I have a #2 going out from the console 5ft. to a pair of 10 ground rods spaced 8 feet apart and bonded with a welded brass bar. Good luck, it's a nice feeling to be able to start from new on the shack! 73 de VE6INM (Glenn) In article <YxPX2.106$Ab.7163@news.inreach.com>, "wbg" <wgifford@inreach.com> wrote:

Hi Joseph --

Wire antennas are usually (but not always) used at the lower frequencies, on bands from 160 through 10 meters. The dimensions at those frequencies are so long (a half-wavelength dipole on 160 meters is something like 260 feet long) that wire is a very practical conductor to use. Also, because of the long dimensions, the dimensions aren't quite as critical and you can have a little slop without affecting things much.

When you get to 2 meters, where a half wavelength is about 39 inches, the mechanical considerations are different, and antennas are usually made from more rigid materials like aluminum tubing; sections of telescoping tubing also allow easy trimming to get the length just right.

Another factor is that operation on the FM bands is usually vertically polarized, which means the antenna elements are vertical, where on HF the polarization isn't as important a factor. It's not always easy to support a wire vertically; a rigid material that can be supported from the bottom is easier to deal with.

So, the classic homebrew 2m antenna is a "coat hanger ground plane" which is made from appropriate lengths of stiff wire (like coat hangers!) soldered to a coax connector.

As someone else pointed out, there are some neat designs for wire antennas for 2m and 70cm, including a "J-pole" design made from TV twinlead. But there aren't nearly as many of these designs as there are designs for wire antennas at HF.

Don't be discouraged by some of the responses you got to your question -- we all had to start somewhere! Now that you have the ARRL Handbook, you have

lots of good information available at your fingertips -- the chapters on antennas should give you some ideas.

73,
John N8UR

3186. Re: Tuning up a TS 520

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-05 00:00:00 UTC
From: treynolds@my-dejanews.com
Message-ID: <7gpkg1$i8m$1@nnrp1.dejanews.com>
Source record: 109166

More specifically, set the meter to read plate current (I think it is labelled IP on the 520). Tune the drive knob for a peak, tune the plate tuning for a dip. Don't keep the key down for more than 5 seconds or so. Do your initial tuning with the mode knob in the TUNE position. Switch to CW and repeat once. After dipping the plate adjust the plate loading for more plate current and then quickly adjust plate tuning for a dip. Repeat this a few times until you have maximum output power or about 230 mA of plate current. Always adjust plate tuning last.

Reproduction manuals are available from www.w7fg.com. They provide excellent service.

73s and good luck,
Tom

When we moved a few years ago, I apparently lost my users manual
which came with my u2AT (the small Micro 2AT Icom made several years
ago). I have been using it in emergency communications here in Oklahoma
City after the monster tornado last Monday evening.
The memory battery no longer holds a charge for more than an hour.
Naturally, I lose all memory channels unless I keep power on
constantly. Does anyone know what battery to use and where I can get a
replacement? Also, anyone know where it is located inside the rig? I'd
like to scrounge up a rapid charger, too, if anyone know of one.
Thanks.
Terry (KA5IHV)

Butch, butch, butch-- This is the wrong newsgroup to announce you perverted fetishes in. From what I have heard on the news, etc., "coming out" is very difficult for gays like yourself, so I will try to deal with your "offer" as politically correct as I can. Please don't ever offer "some of yours" to a 100% heterosexual like myself. We are not "labeling" you; however, we do find that behavior disgusting. The Internet tolerates all kinds of interests, including your inclination toward "cross-dressing" and finding other "cross-dressers" you can let have a "peek" and/or who would "want some of yours". Please redirect your perversions and gay behavior to the appropriate newsgroups. I am sure you will find lots of folks named "Butch" there.

P.S. Your spelling is atrocious. I thought gays like yourself were all perfectionists?

On Tue, 04 May 1999 11:04:08 -0500, David Feustel <feustel@ix.netcom.com> wrote:
>What size copper tubing would make a good lightning ground (from a gas-discharge device)
>to ground? Or would copper wire suffice? (Distance from gas-discharge device to ground rod
>is ~40 feet)

A 40 foot diameter copper rod might be a start. :-)

Seriously, you're going to have multiple kilovolts of potential difference here no matter what you use. That's just too far to expect any conductor to equalize potential during a strike. There are two main difficulties here. The first is the inductance of the lead. With the thousands of amps in a direct strike, the inductance of the conductor will cause a large voltage drop from one end to the other. Second, since lightning is RF, the 40 foot run will behave as a single wire transmission line an odd quarterwave multiple long at several frequencies where lightning energy is still large. That will also create a large end to end potential difference.

So if you're counting on bringing the gas discharge unit to a local Earth potential, you need to get it much closer to that point on the Earth. That's why you want to bring your antenna feedlines all the way down to ground level and suppress them there before routing them to your station. This provides a short low impedance shunt path for the strike currents.

The primary purpose of a gas discharge unit is to equalize the potential between the two conductors it bridges, IE for a coax suppressor, it equalizes the differential potential between the inner and outer conductors. What the resulting common mode potential is to some point on the Earth is usually irrelevant as long as it is low enough to avoid sideflashing.

If all conductors entering and leaving the station are bonded to the same point, called the station single point or ground window, then your equipment won't see any potential differences, and no harmful currents will be driven through it, regardless of the fact that the entire station may rise several kilovolts above local Earth potential during the strike.

To avoid sideflashing, the potential needs to be less than 10 kV per inch. To provide a conservative safety margin, we'd like it to be less than 1 kV per inch. A 40 foot run is 480 inches, so we want to keep the potential from exceeding 480 kV end to end. The end to end impedance needs to be less than 27 kohms at all frequencies where there is significant lightning energy.

A straight piece of #10 solid copper wire will do that, and will be able to handle the 18 kA current surge for the 12 uS stroke duration without failing. This is the minimum conductor size that the NEC allows for lightning downleads. Using a much heavier conductor won't substantially improve matters since it is primarily the inductance of the conductor rather

than its resistance which matters here. Keeping the wire free from bends
is more important than making it thick. But since I'm a naturally conservative
fellow, I use #6 solid for this purpose.

Just upgraded to a new DPO for the shack and need to sell some existing gear to make room. The following are available for inspection and pickup in Kirkland, Washington (Seattle area):

Item 1

Tektronix 434 analog storage oscilloscope, 25 MHz bandwidth. In excellent condition, fully operational, with original manual. Front panel and CRT like new.

$100.00 firm if picked up locally, or $150.00 plus shipping otherwise. The other scopes listed below must be picked up locally -- I don't want to ship them due to their size and fragility.

Item 2

Tektronix 7834 oscilloscope (400 MHz mainframe, variable-persistence analog storage) and 7603 analog (100 MHz mainframe, non-storage) oscilloscope, with the following plugins:

1 7A26 vertical amp (8-9 out of 10, works great)
1 7A12 vertical amp (cosmetically 6-7 out of 10, works great)
1 7A12 vertical amp (cosmetically 6-7 out of 10, works great but Ch1/Ch2/Alt/Chop/Add switch is a little balky, probably needs lubing)
1 7D15 225 MHz counter (near mint, w/manual on microfiche)
1 7B53 trigger (excellent)
1 7B92 trigger (near mint cosmetically, but every few minutes it'll skip a trace or two for some reason)
1 7A13 differential amp (excellent, w/manual on microfiche)
1 7D02 logic analyzer (no cables/probes, seems to boot OK in the 7603 but otherwise untested)
1 7D01 logic analyzer (no cables/probes, seems to boot OK in the 7603)

Both 7000-series mainframes and all plugins listed above for $350.00 firm. Includes original Tektronix manuals for 7834 and 7603 mainframes. Again, this gear must be picked up in Kirkland.

Item 3

Tektronix 454 oscilloscope (150 MHz portable), excellent cosmetic and operating condition. $75.00 firm, including original Tektronix manual (missing cover and some pages near front).

Or pick up all 4 scopes for $450.00. Start your collection today! :-)

Personal check OK. Email with any questions or to arrange an inspection
(note the spamproofed address). .JPG photos available on request.

3211. SSB module: final details...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-06 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <373286A3.3422EC3C@quantacorp.com>
Source record: 108891

OK, done!

SSB was designed in the VX-5 hardware and firmware. Yaesu is either holding the SSB module for future release or gave up on it at some point. It shouldn't be hard to design a BFO with the following specs:

1. Connector pinout. Yaesu might be a source for the connector, or someone with time could find out a supplier and part no. A Barometer unit, for $35 might be too much to use just for the connector and board.

Radio connector, looking from battery compartment:
(top of radio)

B P
E I
A T
T C
H

2 4 6 8 10

1 3 5 7 9

G S 3 B
N E V A
D N R
S O

2. Specs:

Vdc is 3V, and unit should only take power when BARO (pin 9) is low. The unit should have a 10K pullup on this BARO line, for the CPU to identify its presence and force the unit OFF.
SENSE (pin 5) should be tied to GND (pin 1) to identify the module as SSB, not barometer (which has pressure sensor voltage here, always above 0.06V).
BEAT (pin 8) is routed by .001 cap (1n??) to radio AM line. This line DC level comes from the CPU, and turns two transistors off/on that control the TK10930V chip into AM / NFM mode. It also goes through 1pF to pin 7 of that chip, close to a CFWM450F filter (450kHz??). What amplitude of oscillation will require some experimenting.
PITCH is controllable by dial at the radio, and will be 0V when entering SSB mode, and will go all the way to 3V. One problem might be that there is no limit, i.e., when it reaches 3V and you keep turning the dial, it drops right down to 0 and keeps going up. Resolution in 256 steps, 11.8mV per step.

OK, I've done my part. Other factors are that minimum tuning step is still 5kHz, so the BFO should at least change that much for the 3V (I'd say some 6kHz to be on the safe side).

Let's build a module before Yaesu starts to sell them for $20. It would be a shame to go through all the trouble for nothing... :-)

I'll quote you, Eric: "If someone can find a way of making SSB mode work I'll design an SSB module!!" And I couldn't agree more to "this is what amateur radio is all about!!". It also shows, to those worried that e-mail and the Web would wipe out Amateur Radio, that it is simply another tool that is, in this case, helping a lot!

Jose

3214. rig interferes with PC!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-06 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <7gsa7p$4ho$2@arachne.labyrinth.net.au>
Source record: 108931

I've had plenty of interference by the ATX power supply in my PC
to my rig. But tonight I experienced the opposite.

For interest's sake I was tuning on 29.680 MHz or so with about 10W
(lowest on the rig). After I got it tuned up, I turned up the power
to about 100W with the key down -- then the PC switched off!

It still works fine. Not very impressive.

You may actually want a device designed to remove
specific noises such as the MFJ noise canceller.

Otherwise if your primary mode is SSB and you wish
to fight noise I understand the NIR-12 to be preferred.
(I had a Timewave 599zx and it doesn't handle noise
terribly well. I have sold it and acquired a NIR-12
but have yet to test it.)

I have a GTI Electronics Spectra Display unit for sale. It will allow you to view a 5-6 mhz slice on your oscilloscope. It will work with any receiver that has a 10.7 mhz output. The unit was purchased used by me several months ago. I tried it once to verify operation and haven't used it since. It is in excellent condition, in fact it looks brand new.

Unit comes with a complete manual. Price $ 400, shipping included in CONUS.

The ARTSCI Radio/Tech Modifications book lists the mod, but there are four
differentversions shown. Mods for all involve removing and/or adding diodes
D11, D12, D13 (ICOM DAN202U) on the "Front Unit board". It doesn't mention
how to determine which version of radio you have.

No, I wouldn't, because it gives the wrong answer. The value it gives for a 146 MHz dipole made from #22 wire is 35.56 mm *too short*. But if you use the correct method I gave, the answer comes out 7 mm longer than the actual measured resonant length, which is close enough for our purposes, but can be trimmed to exact resonance if you like. (The residual error is due to the end effect approximation used, which isn't exactly right for #22.)

Thank you for expressing your ignorance so clearly for all to see. For one so quick to slam others for their supposed lack of knowledge, you did a marvelous job of showing us your lack of knowledge. You obviously have no idea what the propagation constant is. It is the speed of electromagnetic radiation in a particular medium, IE the speed of light, you redneck. The number 468 is an approximation derived from it for those still clinging to imperial measure to use to calculate a halfwave dipole. Unfortunately, it isn't a very good approximation except for dipoles less than a half wavelength above Earth. In other words, you can get away with it for many HF antenna installations, but it gives incorrect results for antennas at heights that approximate free space, as is typically
the case for VHF/UHF.

You also appear to be completely unaware of the standard system of measurement used by scientists and engineers worldwide (SI, which is the MKSA system of meter, kilogram, second, and ampere defined as the fundamental units used for calculating scientific and engineering quantities), and you seem blissfully ignorant that the length of a resonant dipole is directly related to that of the wavelength in a specific way.

You also did a good job of demonstrating your cracker/redneck/trailer trash upbringing by the choice of foul language you managed to mostly misspell in your little tantrum. One hopes that you aren't representative of the quality of volunteer examiners administering the amateur radio licensing programs. If there are other VEs like you, I hope that they turn in their credentials so that they will no longer be such visible embarrassments to the service.

3221. Help with Motorola P110 HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-06 00:00:00 UTC

Greetings. I just acquired a used Motorola P 110 ht. The radio did not come with an instruction manual. I have one nagging problem with it. There is a small round button above the PTT button that doesn't seem to do much of anything once pressed. On my other radios, this is a monitor button. On this radio, when I press this button, a yellow light comes on for 4 seconds in front of the volume control. Can anyone offer any insight as to what this is for? I wrote Motorola about it but got the cold shoulder I guess because I bought it used. I dunno. Any help is appreciated

>connections?

What you need is to establish a ground window for your station area, and
bond all cables entering or leaving the station area to that. A long ground
run won't form a low impedance shunt for RF or lightning (lightning is RF),
so you're wasting your time running heavy copper straps long distances
in a futile quest for a low impedance shunt. A straight run of #6 will be
adequate to prevent sideflashes, and that's the best you can hope to do
in an elevated situation like this. Your primary protection against damage
is that the ground window single point forces all cables to float to the
same potential during a transient event. If all cables connected to your
equipment are at the same potential, no damaging currents will be
driven through your equipment.

>Here in California, all homes built within in last few years have what is

>potential between the the two ground paths? (I remember a similar problem
>with a token ring network I was involved in installing where the ground
>potential btween the two buildings being connected was sufficient to disrupt
>data transmission.)

The National Electrical Code *requires* that all premises ground electrodes
be bonded together. It isn't just a good idea, it is the law. These electrodes
should be bonded together star fashion. Pick one ground point, call it your
single point, and directly bond all other grounds to it using direct runs, no
daisy chaining. This single point is where you'll connect the bond lead from
your station ground window.

>BTW, "Ufer" is some guy's name, and I have heard the whole silly idea of
>grounding to the rebar originated in Arizona where the earth is so dry, even
>copper ground rods had poor conductivity, the "ufer" theory holds that the
>concrete in the foundation stays moist forever thereby yielding a better

>ground. Can anyone confirm this? I have asked several building inspectors,
>and none seem to know the answer.

It isn't a silly idea. Ufer grounds are *preferred* grounds according to the
NEC. A "made electrode" (driven ground rod) is considered a last resort
if you can't provide a better ground connection, but a better connection such
as the Ufer ground or an extensive underground cold water piping system is
considered much better.

Dr. Ufer's work for Army Ordnance is considered a model of how scientific
and engineering research and development should be carried out. His grounding
system design is good enough that it is the standard way to protect ammo bunkers,
and even nuclear weapons storage facilities, from lightning hazard. The principle
of operation is simple (all good ideas are basically simple). If you parallel a multitude
of resistors, you get a very low total resistance. The Earth can be considered as
billions and billions of resistors in parallel, IE a sheet resistance. The Ufer ground
is also a sheet resistance, bonded face to face with the Earth (and concrete does
have a lower resistance than dirt). The result is a very low resistance connection
between the two. It is also a very low impedance connection, which is even more
important for RF and lightning grounding. The concrete mat forms one plate of a
capacitor, the Earth forms the other. The capacitance is large, so the reactance
is low. This allows transients to be readily bypassed to Earth.

A proper Ufer ground must consist of at least 20 lineal feet of 1/2 inch rebar in
concrete which forms a jacket around the rebar at least 3 inches thick (this is
the NEC minimum). That jacket must be in intimate contact with Earth. A typical
Ufer ground uses much more rebar than this (typically hundreds of feet, all welded
together to form a continuous mat), and the slab has much more contact area with
Earth than just that of a 3 inch jacket. It is an excellent ground. You'd need dozens
of conventional ground rods to equal it.

At work I've seen the Yaesu VX-5R and it is REALLY nice.

Of the many features people say they would love to see in a radio (especially handheld), the one I NEVER see mentioned, which I would REALLY love, is a frequency counter. Having one would negate the need to either guess or know the frequency of a service transmitting nearby. And, the HT could then possibly store captured frequencies into memory automatically.

I know Optoelectronics has a handheld frequency counter with built-in speaker, but at $800, with limited features compared to an HT, I'm ready to pick it up.

Any manufacturers willing to do this? To me, it seems to be one of the few features missing from the 5R. Maybe the next HT from Yaesu can do it?

>suggesstions are appreciated.

Well, first of all, it is unlikely that a 3 dB power increase will be of much use to you. That's a barely noticable power level change for anything but working at the very noise floor, IE extreme weak signal work. So the simplest solution to your problem is to not use the amps. They buy you a very insignificant performance increase.

But if you do want to use them, and you want a foolproof way to avoid overdriving them, then install pads in the driver stages of the amps. You need a 2.2 dB pad. Make sure it is only in the transmit path of the amp, and not in its receive path, IE install it after the amp's internal TR switching. The amps will then be 50 watts in, 100 watts out, and will be a perfect match for the radio.

(20 watt non-inductive resistors are a little expensive, but they are available. The ones with which I am familiar that are good through UHF look like stud mounted transistors.)

Trying to lower the radio's output with the power control increases the ratio of IMD to signal output by the radio, so when it is reamplified the signal will be dirtier than if the radio is allowed to operate at its designed power level. (IMD and noise levels are essentially fixed for the radio's PA by its design and biasing, when you lower the amount of drive, then the ratio of signal to noise is degraded.)

Using a throttled back radio through an external amp with too much gain is an invitation to make yourself unpopular with your amateur neighbors. Any spurs and broadband noise will be amplified right along with your signal.

It's a bad idea. A power attenuator in the external amp driver knocks down signal and noise from the radio equally, so it is a better approach.

>Whats the difference between an RF ground and an equipment ground?

Well, the purpose of an RF ground is to counterpoise an unbalanced antenna. As such, it should be located at the antenna feedpoint. The purpose of an equipment ground is to eliminate electrical shock hazard to the operator. As such, it has to be at the equipment. If you're feeding an unbalanced antenna directly from the radio or a tuner, IE a long wire, then your RF and equipment grounds may be one and the same physically, though they still serve different purposes.

I'm looking to sell the above mentioned HT. I installed a new keypad on it and would rate its condition about a B+. It comes with two 5W Ni-MH battery packs. They are 12V and 1300mA. Both have hardly been used (less than 5 or so times each). It comes with the trickle charger, of course, which takes about 14 hrs to charge each battery. I would recommend purchasing a quick charger. I've seen universal ones going for about or under $40 at Hamventions. I'm also including a basic MFJ shoulder microphone. I'm asking $180 obo. If interested, email me at hodgesmn@email.uc.edu.

I do have the manual and schematics for this radio too.

Marv OM,

I agree with you. I don't see ham radio 'dying' at all. I operate in excess of 12 hours a week on the air, basically all CW. Over half of that is mobile CW. The CW bands have plenty of ragchewing going on all the time. I know, I am one of them. And I spend almost all my time on only one band: 40M. A while ago I worked a 16 year old in Phoenix who was running homebrew TUBE-TYPE gear he had made himself, from old handbook articles. Said he just wanted to play around with tubes is all. Have worked several newer hams, some in their teens, who started with codeless techs, then discovered (some to their total amazement) that CW is an excellent ragchewing mode, and works very well. Some are excellent CW ops, know procedure, know how to listen, with less than 2 years experience in ham radio. They try to spread their enthusiasm to some of their non-CW friends, often with no luck. So they go their own ways.
The message here? You are either interested or you are not. Nothing new going on here. CW will continue to be used by the many who find it enjoyable, that is, can attain reasonable skill at it. Apparently many non-cw ops think we are all WORKING to use it, writing stuff down, using straight keys, egad! Hey, it is just another language guys, if you are proficient, and is effortless to use. If you're not wired for it, there are many other modes to use. That is one of the beauties of ham radio.

73,
Don, W6JL

It looked like most of their products...grossly overpriced and behind the times when it comes to ham radio. I took a look at it at a local 'Shack and was not impressed. It looks more to me like one of the FRS radios from Cherokee. Worth $79 maybe, but not the $179 they wanted. Rather have a VX-1 for $20 more...

That is the point. There are many modes that don't use CW. Many that are interesting and satisfying that don't need knowledge of CW to use. The hobby is diverse and growing more so all the time. Yet there is truly only one test for suitability to belong to the club: knowledge of code.

I have the skill to pass the practical test (and have with the training software) through Advanced, yet I hold only a Tech ticket because of the code. I am still trying but I haven't found my method for learning code yet. I memorized the tapes, and have tried a couple of different computer tutor programs, but so far I have not been able to master CW. I will get it eventually, but it is not coming easy. I resent comments from other hams about being an "appliance user" or the comments on this list about code being a "moron filter." We all have assets in different areas. Learning the code is just plain a bitch for me, and is for others.

I see Techs filling key spots in many clubs, taking on important jobs in weather nets, coordinating public service activities and the like. Some of these folks will upgrade, and some will not. The code will be an obstacle for some, the practical test will be an obstacle for some, and some are content with what they can do with their current ticket. None deserve to be looked down upon because of lack of code speed.

Isn't that the truth....Wireless indeed!! Good point Marc, on the entrance conduit. I placed a 2" entrance for all the antenna runs and #2 grd, etc. Guess what... there are now 2 of the 2" entrance holes and both are darn near full. Had I the opportunity to do it over again, a single 4" such as plastic plumbing pipe. It's a nice grey or white colour and has smooth edges so that the cabling doesn't get shaved. Glenn (VE6INM)

Nice USENET police work Bob. My hat is off to you and the job you do.
Uh....your complaints are actually off topic Bob. Write yourself a Internet
Infraction Ticket. You need to leave a valid E-mail address so you can
receive your electronic summons for your appearance at the Judicial Chat
Room to receive your trail date.

Why not start a crusade against wasted bandwidth discussing what radio group
a radio item for sale should be posted in. You have caused more clutter
with your complaints than a single amateur item posted for sale in the wrong
radio group ever did.

rec.radio.swap is such a dirt whole of dealers, auctions and spam it is easy
to understand the temptation of an individual party to post in some of the
other NGs.

IMHO.....

70cm ht with battery and wall charger. The charger won't charge the battery but with a 12v adaptor the radio works fine. Will go up to about 470mhz easily. First $50 + ship gets it all or will trade for a hf base antenna that covers 10, 12, 20, 40, and 80 meters. I am in the Dallas area

Source record: 108966

Well, you can look at the situation this way:

1) It sounds like this group is on a simplex frequency running omni antennas and low power, correct? Could be worse, they could be on a wide area 2m repeater like groups are in California.

2) They have clumped together on their 2m frequency to BS one another. Are they QRMing any other 2m stations? Does not sound like they are.

3) If 1 & 2 are true, then don't worry. Grab your frequency dial and tune on!

Sean - K3XT

I am located in Manchester NH, and I have the following items for sale:
==========
Yaesu FT-757GX HF Transeiver |
Yaesu FC-757AT Automatic Antenna Tuner |
Yaesu FP-757HD Heavy Duty Power Supply |

This radio is 8/10. It has a few nicks on the front panel, meter
illumination light needs replacing.

Asking $650.00
==========
Yaesu FT 703R 70 cm HT
Nicad battery (holds charge, but condition unknown) + wall charger
Alkaline Battery case
VOX headset (needs foam earpiece and microphone cover)

Asking $50.00
==========

MFJ 1270C TNC-2 Packet controller >> Like new
(about 4 or 5 years old, S/N 01027421)

Asking $60.00
==========

Kenwood MC-85 microphone
Had to replace volume control slide switch, but works great

Asking $60.00
==========

Kenwood SW-100 SWR meter (1.8-150MHz @150 watts)
A few scratches but otherwise it works great

Asking $60.00
==========

GS Dielectric model 2008, 2-30 MHz 1000 watt thruline wattmeter slug

$45.00
==========

I'm planning to be at the Deer-chester Hamfest (Rochester, NH) on
Saturday if the weather is okay.

All prices negotiable, and I'll split shipping charges with you.
If you don't like my price, make an offer.

I just finished creating Control Commander for the Kenwood TS-570 series of
radios. It allows you to operate most of the radios controls from your PC.
It also allows you to program the memory. Please go to
http://www.qsl.net/kc8lnm/cc.htm
for more information or to download it directly use
http://www.qsl.net/kc8lnm/cc.zip .

try going to the auctions .....you can pick up good quality switch mode
power supplies for under $100...

the last lot i brought cost $500 for 20 supplies.... 5vdc at 200 amp....2 of
these in series make a good 200 am p power supply with practically no ripple
on output..

Hi Joseph,
There are a few idiot Hams like any other hobby, fortunately most hams don't act this way. Hopefully some folks will direction find these people and record their foul transmissions and let the ARRL know about it. Don't let a few dopes ruin your thoughts about ham radio. Most of us are fine helpful people.

73,
Tom

3269. Help: TS570-D power meter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-06 00:00:00 UTC
From: "M.Sivcevic" <stelex@ozemail.com.au>
Message-ID: <Gf6Y2.7410$116.11871@news2.ozemail.com.au>
Source record: 109001

Some time ago I have got some mods for TS570-d and it really did work nicely. The power can go up to around 200 wtts, but I kept it on around 150w and it works just fine since june last year. The problem is that the powermeter on the rigs front panel doesn't show more than 60W. If I use external pwr mtr it shows trully 150w so that PA in OK. Now, if I go back and reset original value of max 100w (in the eprom) the pwrmtr still shows 60w only (external says 100)
Anybody has similar expirience ? The rig's EPROM is being accessed by shortening pins #8 and #9 on the 13 pin DIN connector on the back of the rig and turning the radio ON while holding two button combination. I really would appreciate any kind of help . TNX !

The $200 is what The Boneyard Radio Price Guide gives and it is usually a little behind the times. Certainly not unreasonable if in good shape. The R-1000 is a resonably good little radio, not great but good.

Common occurance when the power is increased on the 570 - no fix
available from K'wood (that I've heard of) other than returning to
them for "alignment" - during which, they'll most likely turn the
power back down...

I have had my TMV7A since they first came out. It is a GREAT radio except for the display. It is a horrible display for mobile applications. Mine is mounted remote on a cellular telephone pedestal in my Suburban. I have called Kenwood and complained about the display in sunlight numerous times and they will not do anything. I bought a TMG707 for my wife's car and the display is great. I don't like the radio as well, but I think I would go with the TMG707 over the TMV7A in my car if I were buying a new radio today.

Good Luck and 73,

Jim N5JIM

A whole lot of stuff snipped:

Bob and anyone else who reads this.... While I may agree with you for the most part, I must question something here.

USUALLY (95% or better) when I advertize something, I try to stick to Rec. Radio Swap. I'll admit, I may have screwed up a couple times and posted elsewhere, especially early on when I first started to advertize and feel my way around. BUT my point is, is that I seem to recall a time or two, when I posted on ONE news group and it automatically appeared on a couple others. I know this because, I'm too lazy to type it in twice. And too dumb to know how to reproduce it to more than one news group at a time. A computer whiz I'm NOT! I know enough to get by.

So, IF that is true (automatic crossposting), then I was not able to control that. Except not to have posted in the first place. IF that DOES happen, then how can one prevent a post from being cross posted to an unintended target?

I don't agree with a lot of what appears on on the news groups, out of context either, but I've seen MANY arguments about it, when folks tried to curb it. So, I just shoot by the ones I don't care to read, and move on to those I do. It's like trying to put out a forest fire with your urine. If no one is going to listen, why bother? It's like anything else, SELF CONTROL! There's very little of that anymore. Be it the ham bands, cb, computer, highways, etc.

Whatever the case, I STILL enjoy the newsgroups very much, and the chance to talk with you folks whether we whole heartedly agree or disagree.

Thanks in advance for any clarification you can give to my question regarding cross posting.

Saw a rig in a pawn shop labeled "CB Radio $149". I almost walked right by it but noticed in the mirror behind it in the case that there was a key jack. Anybody know what this is? There is a mode switch... AM FM USB LSB CW. Could this be a 10 meter rig? Or all band HF? The only model markings I saw were RCI 2025 or maybe 2250 something like that. Thanks in advance.

3283. Icom IC-707 How to unmodify?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-06 00:00:00 UTC
From: Andy Keir <andykeir@gl.hardnet.com.au>
Message-ID: <01be97ac$a3a19f80$656f6f6f@pentium>
Source record: 109015

I have a customer (radio is my job as well as my hobby) who has brought me an Icom IC-707 HF rig. He wants to sell it but it appears to have been modified as it has somewhat "extended" TX capabilities. I would like to restore it to standard before releasing it onto the amateur market but I can't find any info on how it has been modified. I can't see any obvious solder jumpers or extra work ... is it just a software thing done with panel buttons? The customer has no data on the rig as he bought it second-hand in its present (modified) condition.

I have searched the net but can't seem to find any information other than the fact that some mods exist for this rig ... unfortunately no clues as to how it was done.

I would appreciate any information from anybody who knows anything about this radio. You can email me at andy@keir.net. Any information will be kept confidential and will not be released to the amateur community ... I'd like to keep our present generous import concessions on amateur rigs!

Cheers,

Andy, VK2AAK

If you (or anyone else) are interested, I have a non-working 3KVA UPS free to anyone willing to haul it from it's downtown St. Louis home. Made by Deltec for the military (20 years old?) and appears to have a low-level problem. Includes documentation. Several hundred pounds of iron! Please give me a call if you are really interested.-Ken Gianino (day) 314-241-1188 Ext. 203

3286. Re: Icom 706MKIIG or Yaesu FT-100

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-06 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <19990506083759.16407.00000021@ng-cj1.aol.com>
Source record: 109018

QST just did a review on the Yaesu FT-100
and it is ONE LINE if you are a ARRL member. One thing the Yaesu did is to use one power module for UHF/VHF and it is inefficient and draws a lot of current when you put out only a small amount of power.I feel that is why you hear a lot of guys sending their FT-100 back to Yaesu (several times) to get the FINAL replaced. These guys say they were only running small amount of power but since the final is ineffient they are still drawing lots of current and it somehow SMOKES the radio. Gone are the days when you can run
small power to preserve the life of the FINALs. The only things the Yaesu has over the ICom is 1) The noisebanker works
2) the DSP has High and low cut (bandpass)
3) the dynamic blocking range is better but not
by a huge amount.
All the Yaesu features don't amount to a hill of beans if the radios keep dying on hams. I hope Yaesu gets the bugs out. I was told by a Yaesu REP the reason for the ONE year delay in releasing the FT-100 was due to technical difficulties. I think they just pushed it out the door once they knew the ICom was going to be for sale soon.

Do a search on yahoo for RCI-2950 - that is most likely what you saw.
It is a 10meter that is easily modified for CB use (even displays true
channel numbers) its a 25Watt rig, I believe. What I started out with
before I got my license, and then I sold it and bought a 2-meter rig.

To all that read the QST review of the FT-100,

Please keep in mind that the comparisons of the FT-100 in the review are against the old ICOM 706. We will have to wait for the review of the 706MKIIG to make a fair comparison.

Regards,
Dave KG0US

Jack,

Brass pounders will always be around, and in large numbers too. As for new blood in Amateur Radio, there is plenty of that too. Where did the notion that Amateur Radio is dying come from? At my extra class exam (recent) there were about 5 youngsters aged about 10 taking the 5 WPM code test. Come to think of it, there were kids testing at every one of the test sessions I attended.

I think we need to worry more about the F layer falling.

Chicken Little is an old tale. No one learns. Seems folks are always the same.
Thank you for an independent observation.
I suspect the same small fraction of 13 year olds are still learning code. Like many things that require a little work up front, CW is worth it.

*****

Test Equipment For Sale

1) Weston model 630A Volt Ohm Meter with red/black coiled test leads/prods. Measures AC/DC voltage and current, ohms and has an output meter function. This VOM is great for working on boatanchor tube-type gear where voltages vary widely. The large meter scale has a mirror for accurate visual measurements. This VOM works in all functions, and the case/glass are in very nice condition. $45

2) HP-5314A 100mHz Universal Frequency Counter/Timer combines excellent performance and traditional HP quality. This portable general-purpose counter delivers high-quality measurements for applications in production test, frequency monitoring, telecommunications maintenance, and service. Functionality includes 100 MHz frequency range, period, 100 ns time interval resolution, ratio, and totalize measurements. Easy-to-use front panel display, control buttons, functions, and reliable measurement of a variety of signals. The light weight and compact size makes the HP 5314A especially suited to field applications. Excellent condition $125

For Sale:

Hygain Ham II/CD-45 rotator - includes late model CD-45 motor w/serial number 94077, Ham-II control box in excellent condition, 65ft of 8-wire cable and bottom mast mount assembly. The motor has been used outdoors for three years turning a small 6m and 2m yagis. It looks very nice +++ with little evidence of outdoor use. The mast clamps and mounting hardware look like new. $175.00 plus shipping.

Hi Keith OM,

Thanks for the thoughtful response.
In WWII, the military taught Morse code to literally thousands of people from all kinds
of backgrounds and abilities. Many of them were not doing it voluntarily, either!
I myself cannot see where using "tapes" and "computers" is an effective learning method
for learning to use the code conversationally, as we do in ham radio. First of all, it
is boring, listening to basically boring content being sent. As you said, you eventually
memorized the tapes. That should be a clue that that is not the way to learn the
code. Why not listen to something interesting instead?
To become comfortable with CW, you have to 'USE IT' for some purpose. Listening to real-live
conversations on the air is what made CW take off quickly for me. Fortunately, in those days
there was no distracting temptation to somehow 'use a computer' (a distinct advantage, from
what I can see). Second of all, it does nothing to teach you how to listen to REAL
WORLD signals off the air, while at the same time, you are internalizing what is being said.
This is what worked for me. It has been music to my ears ever since, and is definitely my
preferred mode for ragchewing on the air, compared to using voice. When you are otherwise
just wasting time (ex: while driving), sound out everything you see

written: street signs,
license plates, etc etc. Make the sounds of CW very familiar to
yourself, so that
you associate those sounds immediately with the letters and numbers and
punctuation.
This all requires zero investment in $$, and can be done anywhere,
anytime. Lastly,
listen ON THE AIR to real CW QSO's, as much as you can, to all kinds of
fists, in various
conditions of in the clear to buried in the QRN/QRM. Watch out! You
might suddenly
become hooked; that is a risk you take. If that happens, you will
suddenly see yourself
on the other side of the perennial code argument, and can't for the life
of you figure
out what all the fuss is about; it has happened to many others, HI.
Lastly, like anything else, CW is not fun for EVERYONE. Some people
just do not take to it.
But that is a very small group indeed, I think. Especially at the
moderate speeds required.
After all, 5 WPM you can practically look up real time. 13 WPM actually
requires that you
know and can respond almost immediately to the characters. This does
not seem to much
to ask, for a large number of us. I believe it is an essential part of
one's education
to become a ham and to use HF (the 'real' ham radio to me).
You can do it.

73 and GL,
Don, W6JL

> Keith Lodahl
> Mayville, Wisconsin

Keith,

I forgot one other important point in my post. DON'T WRITE STUFF DOWN. Copy it in your head; that is how you will be using it for ham radio ragchewing. Writing it down is an (unnecessary and limiting) habit that you don't want to get into if you can avoid it. I sometimes run into ops on the air who ask me (as I am working mobile CW) "how do you write it down?". Egad.

73,
Don, W6JL

3310. Your FCC At Work ! Daily Digest Subscribers Get Smut

For sale in immaculate condition. Heath SB-310 SWL receiver. Has all three filters AM. SSB, and CW. Also has the SBA-310-3 mod to cover 21.3 to 21.8 Mc. All rear panel connections original. No scrathches on the cabinet or panel. All plastic clear. The chassis is shiny aluminum as new as you can get. Radio works fine. Will guarantee condition as stated. One sold on e-bay recently for $365, not sure of the spec's on that one. My price $325 plus shipping. Thanks

Try Techamerica (www.techamerica.com). Just pulled their website and they show them is stock for $159. Don't think you'll find a good used one for that.

Why did you think you had the right to re-post that message in any other forum? What was your point in re-posting it?

The only thing it proves is that the FCC either hasn't developed or maybe hasn't made all its employees peruse their email policies.

But I question your motives by re-posting it here. It means absolutely nothing about any FCC department or division.

Hi Joseph: You've only had your ticket a few weeks and already you're a better Ham than a few much more experienced fellows. It's not what class you are, it's how much class you have.

Only a spammer would call spamming "the new market".

> Bandwidth charges are equally nonsense. The binary groups
> distributing graphic files and programs take up
> thousands of times the bandwidth of the ham groups
> with lots to spare, thank you. If we tripled the
> number of radio ads here, we'd still not be a speck

You're wrong, and it's been explained before.

> It is useless and senseless to protest against this new market,

There is no market here. Go away.

> especially when every modern browser is capable of
> deleting messages some people claim they don't want to
> see before they ever see them.

It is not our job to delete them. It is the job of newsgroup participants
not to post them where charter forbids them.

> You don't read every word in a newspaper, either.
> I don't see anyone calling their newspaper and
> complaining "you print some things I don't want to read!"

As a matter of fact, newspaper switchboards are overloaded with such calls.

> That would be silly. It's equally silly to protest
> against newsgroup articles they don't want to read
> when they have the means to simply *not see them*
> right at their fingertips.

If you can't play nice with others, go somewhere else.

> People need to stop claiming they are somehow being harmed
> by the sale posts. It just isn't true.

Flat statement without substantiation. Typical spammer tactic.

> They're harming themselves by not setting filters
> that were put there for that purpose.

But we do. They usually take the form "Provider, please stifle your spammer."

> Same as someone who refuses to wear a seat belt-
> he has no one to blame for his bruised forehead but himself.

A completely inappropriate analogy.

> Steam engine makers and tube manufacturers protested, too.
> And the future --just-- --kept-- --coming.
> You can stay behind if you wish.
> But don't damn those who choose to progress,
> especially since they are not harming you in any way.

You'll pardon us if we keep fighting to keep things the way they're meant
to be, and work to get spammers off the 'net. Or you won't pardon us, but
we'll keep doing it anyway.

3323. Heathkits and other Items for sale at Dayton (Final Update)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-07 00:00:00 UTC
From: Matt Robbins <robbinsm@umich.edu>
Message-ID: <7h03vd$1ur@newsops.execpc.com>
Source record: 108855
Cross-posted to:
rec.radio.amateur,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

I have finished with my final update on the items we will be taking to Dayton. Please be sure to read the info at the top of the page if you are interested in purchasing an item(s). If you emailed me about and item and I have not replied, it may be because I accidently deleted the message because of the large amount of replies or because the item is sold. I have marked all items that have been sold on the site. Hope to see everyone at the hamfest. Once again, the site address is:

http://www-personal.umich.edu/~robbinsm/heathkit.htm

Thanks,
Matt

Actually I've seen used ones on this list for $100, but far and few
between. I have this radio myself and like it very much.
Good Luck.

Some software (e.g., Morse Tutor Gold) is pretty effective, in that it sends typical, but random, QSOs. Of course that may be boring (many qsos are!), but it is better than the old 5 element groups.

You can buy a new 50 watt ICOM or Kenwood 2 m mobile radio with more memories for about $200. So I would go down from there. It is a good radio.

Jason,
The small button above the PTT on your P110 is programmed for
"silent monitor" mode. Despite the complex name, all this does is take the
PL off of your radio so you can hear all of the traffic on channels you are
on. If you notice, once the light has gone off, if you change the channel
or key up, the light comes on again. This is supposed to remind you that
you are in silent monitor mode with the PL off.

Source record: 108898

I have a TM-V7A and like the radio. I got acceptable viewing of the display by putting the display in reserve mode display at a contrast setting of 10. With this setup the display is as good as my older Kenwood 733 amber display.

I will say that wearing polarized sun glasses and viewing at certain angles does made the display look "black". The blue display is more susceptible to this effect than smaller amber displays.

3354. HELP: ICOM IC-228H repair

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-07 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>
Message-ID: <7gufausor1@nnrp1.deja.com>
Source record: 108909
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur,rec.radio.amateur.equipment

Hello!

After some time working on other things, I have returned to radio related activities... This time, a recently received IC-228H is the patient in my workbench. I bought it knowing that it was stuck in transmit. I got the original box, manual, microphone and, of course, the transceiver (which also has the UT-40 optional tone module :-)). I just missed the power cord (any available, at least the connector?) and the screews which hold the rig in the mounting bracket (which I have).

Well, looking at the schematic I suspected of the transistor which is activated by the PTT switch. I got the 2SC2712 SMD transistor out of the PCB, along with a 100k resistor in the bias circuit and then powering the rig I got it in RX mode. Wow!!!. I am a genius ;-)!. So I located a replacement transistor (it was not hard, as at my work we use lots of them and this was a common PNP transistor) and replaced it... To find that the rig started again in TX mode. Hmmmmmm.... Not a genius at all ;-)!. Then I decided to check the SMD bias resistors around that transistor and... voila!. I found a 220 Ohm resistor which had drifted to about 60k Ohm!. Replacing it temporarily with a conventional 220 Ohm resistor, I got again RX on startup. Nice!!!. So I hooked the microphone, pressed the PTT and... nothing happened!!!. RX mode with or without PTT pressed. Well, don't panic!. Sometimes things are that way... Manually shorting pin 5 (PTT) to GND, I could get the rig on TX mode. So the switching transistor was working fine. Faulty PTT switch?. Opening the microphone I found that the PTT switch was fine so... Wiring!!!. I opened the mic connector to find that the soldering was modified!. A fast check to the manual and schematics revealed no less than three wires uncorrectly wired (including, of course, the PTT). Once I fixed it, I got PTT, UP and DOWN functions as usual. Yahooo!!!

But, wait a moment. The RX audio is looooow... And the squelch doesn't work (the RX LED is always on). Checking with my trusty walky at 25mW (Extremely Low power), I could get maximum S-meter 'deflection', but very low audio, hard to hear. And that's all for now!. I am stuck at this point: low RX audio and non working squelch. Could somebody help me with this?. Perhaps is a common failure with this rig...

Thanks a lot and best regards.

JOSE

Yep, your using the alkaline batteries, only 300mw available with
those. When you install the 7.6v pack the TXPO button will step
thru the different power levels.

Just for your info ..... Yaesu is selling in japan the cx-500, which looks identical to the VX-5 but is a 1-1300Mhz scanner with the "Standard" name on it. I saw a picture on the Strongsignals.net page & it's most likley on the Japanese Yaesu/Standard sites. Perhaps the SSB module is in (and was orig. designed for) this version of the radio???

I just finished giving my seven year old his code lesson. He's learning the code to earn a award in his Tiger Cub Scout group. He is a seven year old that came to me to learn the code, and has no interest in radio, I would think that anyone who is interested in radio should stop crying about it and donate the 15 minutes a night for 2 weeks, and learn it.

No one complains about having to learn how to use windows before they can surf the net....

"Marconi vs Sarnoff"
You said it perfectly in those few words, Adam.

Fluid pricing via networked auction is the wave of the future
in many, many areas- not just in radio stuff.
Hams are into it early because (contrary to cynical popular myth)
most hams are progressive people.

The charge of "clogging up the newsgroups" is nonsense.
Those who wish to participate in the new market can do so.
Those who do not can set the filters on their browsers
and they will never even see the deals go by,
leaving them with the "pure" version they claim to desire.

Bandwidth charges are equally nonsense. The binary groups
distributing graphic files and programs take up
thousands of times the bandwidth of the ham groups
with lots to spare, thank you. If we tripled the
number of radio ads here, we'd still not be a speck
on the bandwidth map.

It is useless and senseless to protest against this new market,
especially when every modern browser is capable of
deleting messages some people claim they don't want to
see before they ever see them.
You don't read every word in a newspaper, either.
I don't see anyone calling their newspaper and
complaining "you print some things I don't want to read!"
That would be silly. It's equally silly to protest
against newsgroup articles they don't want to read
when they have the means to simply *not see them*
right at their fingertips.

People need to stop claiming they are somehow being harmed
by the sale posts. It just isn't true.
They're harming themselves by not setting filters
that were put there for that purpose.
Same as someone who refuses to wear a seat belt-
he has no one to blame for his bruised forehead but himself.

Steam engine makers and tube manufacturers protested, too.
And the future --just-- --kept-- --coming.
You can stay behind if you wish.
But don't damn those who choose to progress,
especially since they are not harming you in any way.

>volts.
>
>Here are my questions:
>
>Why would I get 6.8 vs 8 volts? Is this normal?

There's a current limiting resistor in the radio to protect
it against shorts if a mic is miswired. What you're seeing
is the voltage drop across this resistor because the Heil
preamp is drawing more current than the radio is designed
to supply. (Icom electret mics require very little current.)

>Should the amp work with 6.8 volts?

Maybe, but there may be some (more) distortion.

>Has anyone else had a similar problem?
>Does anyone have a solution?

Well, you could try using one of the Icom mics
designed to work with the radio. I find that very
satisfactory. The fidelity of the Icom electrets is
better than that of the Heil elements. (For that
matter, the $4 Radio Shack electret elements
have better fidelity than the Heil elements.)

Ok, I realize you went to the Heil because you
don't want fidelity. But there are easier ways
to get a peaked audio response. A simple RC
network installed in the radio can do it.

What you might try is powering the preamp off of
an external supply. Be sure to use a capacitor to
isolate external power from radio power in that case
or you could blow the 8 volt regulator in the radio.

I would like to buy some HT-1000's and MT-2000's
They must be native 450-520 UHF, in good condition..

1) Model/Model #
2) Condition (on scale 1-10)... Please note any major defects...
3) Are the following included?
a) Universal connector seal
b) Antenna
c) Speaker Mic (model #)
d) Charger (model #)
e) Batteries (model #/date code/condition)
f) Carrying Case (model # or type)
g) Battery Belt Clip
h) Programming Cable
i) RIB box
j) RSS Software (version #)
4) Is the ID label on the back of the radio
5) Price you are requesting (Please give the lowest possible, I do not
like to haggle...)
6) Approximate S/H cost to zip code 11576
7) Your prefered method of payment...

Thank you VERY much... I look forward to doing business with you....
Marc

> Are there any modifications for the VX-5R to transimit 220?

NO
> Any mods for AM transmit?

NO
> Also any modifications to boost TX power?

NO
> And I've heard some things about an SSB module, if it exists/will exist
> will it be RX/TX or just RX?

People are still playing with that. There has been no design for an SSB
module for the VX-5. More than likely, it will be RX only for the SW bands
if in fact one is ever done.

> Also if there are any mods other than what can be done with software let
> me know.

So far, just the extended transmit mods by removing a solder ball in the
radio under the battery compartment. That can be done also by software using
the EVE programming software (it's free)

Awesome radio....mine is on the way!

> Thanks!

Got to www.onelist.com and search for the vx5 list. You can read the
articles, subscribe to the list, or read through the archived articles.

Source record: 108739

Well BD, experience is how I know that, but to prevent the of start of another newsgroup war I will correct my statement to Rick and add that :" this may not work with newer model computers that do not have shielding, tempest or otherwise". Then again, with the computer off, there is no communication with the monitor is there? Nothing for the little bugger to radiate. Right? I will add however, that most of todays manufacturers have taken action to mitigate Monitor RFI. My 17 inch Sun Monitor has the torroids built into the video cable. My older Compaq didn't have this but I cured that problem, My son's newer computers do not cause RFI but only the Sun has the visible torroids in the cable. His compaq causes no RFI , but no visible torroids! Don't kow how they did it.

Magee

3386. Re: Kenwood SM-220 vs SM-230

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-08 00:00:00 UTC
From: mrauchle@aol.com
Message-ID: <19990508192134.14316.00000787@ng22.aol.com>
Source record: 108741

Yes the SM-220 will work with any HF radio for transmit waveform viewing or two-tone tunup of a linear amplifier. However, the PAN DISPLAY for band scope operation will only work with Kenwood radios having an 8838 IF (BS-8) [TS-940S, TS-950SDX, TS-870 etc] or 3395 IF (BS-5) [TS-520]. The SM-230 has a Pan Display only for 8838 IF.

Hi Gang,

I recently acquired an unbuilt IM-18 at the Hoss Traders hamfest in Rochester NH, but it is lacking only the manual... if you have a manual, I'd be happy to pay for the cost of copying and postage (need the full manual with assembly instructions).

Found a big part of the problem with mine was the computer power
supply. I installed a couple of .01 capacitors from each side of
the line cord to ground inside the power supply case.

This is correct. A friend has an earlier model and I have a later model and you can tell the difference - especially when the sun creates a glare on the screen. The screen on my radio has a matte finish which doesn't have as much glare.

Can't really say, but they will do that. My thinking on this is an overvoltage spike that sets off the over voltage protection SCR. Probably when you loose power and then it comes right back on. Have caused it to do the same thing when I turn it off and on real fast. Astron makes a fine supply and I have one that stays on all the time. I had one in service on a small hill powering a repeater and had to get rid of it for the same reason. Just did not like driving to the repeater to reset it after ever storm.

3400. E.F. Johnson 6N2 Amp Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-08 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <s%NY2.591$qh4.41601@iad-read.news.verio.net>
Source record: 108779

Hello. I have a few questions that I've been wondering about the E.F. Johnson 6N2 6m/2m amp. If you can answer any or all of these questions please e-mail me. Thanks a lot in advance and any help is appreciated. The questions go as follows:

1. What are the dimensions of the amp?
2. Does it cover 2m/6m full bands?
3. I've heard that it does 1200w PEP and 1000 CW w/good tubes. True?
4. About how much would a used one in good condition cost today?
5. Does it require anything extra to operate (ie. power supply)? And if so about how much would those accessories cost today?
6. And does anyone have a good suggestion of a place where I might be able to find one?
7. And does anyone happen to know of a picture of one on line?

Anything notable about the amp or something else you might happen to know about it I would also love to hear. Thanks for reading!

Yep: Maxtrac Programming Cables too ! (See Below)

Still have a Few left....These are "Brand New" Motorola RLN4008B Rib boxes that are used in programming Motorola Portables and Mobiles, Still in the Anti-Static Bag and comes with the Original Box and Instructions. They are intended for the Professional Motorola Service Techs who program and service (/\/\) products all the time. Also Motorola Rib Boxes have a dual Power Supply Support system in the event one or the other Power Source develops a problem which could be fatal to Motorola High End Radio products...Some Clones do not have these features, and can be costly in the event of a Programming interuption.

Asking $175.00+$8.00 for shipping and handling
==========
Can be seen @==>>http://www2.4dcomm.com/metrotech/motobox1.jpg
==========

In addition, I have a few Maxtrac/Radius/1225 Series Cables too, these are built very well in comparison to most clones, has a Heavy Duty Support for the Programming Plug, and trully is built better than most I have ever seen. Not just a packaged DB25 pin connector and a cable with modular plugs on both ends ! Asking $29.50ea+ $5.50 Shipping and handling
==========
Can be seen @==>>http://www2.4dcomm.com/metrotech/maxtrac2.jpg
==========
I also have the Factory Power Supplies @ $20.00ea, or if you wish I can supply you almost the exact same power supply for $10.00, but you have to solder on the
plug

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If you wish immediate shiipping) or a personal check is A-OK too if you do not mind a short
delay do to bank processing time.

3406. FS Saber 1 uhf 12ch (was$240)w/2batt REDUCED!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-08 00:00:00 UTC
From: xeon <xeon@ultinet.net>
Message-ID: <3733BFD1.72C4F7A9@ultinet.net>
Source record: 108785

This is what i have

Saber 1 uhf 12ch
6D core, H/pwr, non secure
Model # H44SAN7139CN
comes w/ 1 batt.motorola used (not so good)
plus 1 brand-new batt motorola (7.2v @ 1800 ma)
& ant. the shape of the radio is in
good shape I'll give it a 8.

Note*

Asking $240. $225 + you paid for S+H
* Prepaid (Postal) Money Order*

****Need to read radio for band spread?****
Don't konw band spread!

I'm not going to paid someone $40 or $30 so i can read
the radio. If I'm not going to kept it.

Then i used my scanner to see what were the
CH. And this is what i found.

Ch. 1 447.285
Ch. 2 449.925
Ch. 3 460.000
Ch. 4 460.500
Ch. 5 449.125
Ch. 6 447.125
Ch. 7 --- Blank
Ch. 8 --- Blank
Ch. 9 --- Blank
Ch. 10 --- Blank
Ch. 11 --- Blank
Ch. 12 --- Blank

Save $40 or $30.

And this is why I'm selling it!
1) I got it with a trade!
2) It cost to much for me to keep this radio.
I would need a charger , software , cable,
rib box and get this a 386 computer. Ha

You can e-mail me

>avoid it. I sometimes run into ops on the air who ask me
>(as I am working mobile CW) "how do you write it down?". Egad.

Hi Don!

Hmmm... I've heard this admonishment before, and I really don't understand it. I've been operating almost exclusively CW for over 30 years, and I've always written it down. It feels natural to me. It goes in my ears, it comes out my hand. It's not particularly legible above 30 wpm, mind you, but I can refer back to my notes in a ragchew and remind myself of what was said. (I can't recall a 10 minute monologue, but I can if it's written in front of me). Later on (2 or 3 qsos late), I can jot down a note or two in the log if I want. My wife can look over my shoulder if she wants. When visitors come over, they can see that the process actually works... morse in, words out. Above 35 wpm or so, I'll put the pencil down and copy entirely in my head, but if somebody throws a long unfamiliar and non-phonetic word out there at 45 wpm, I'll probably miss it, and I've found that's usually the case for people that "only copy in their head", even at slower speeds. And speaking of slower speeds, people that copy only in their heads have difficulty with copying 10 wpm qsos... I think you forget what was sent at the beginning of the word at that speed... hi.

Besides the practicalities, I think it's easier and faster to learn code while writing it down. As you decipher a letter aurally, you write it down, see it with your eyes, and it connects you with the part of your brain that already knows how to read and write.

Hey, different strokes for different folks, but I think it's a lot easier and more practical to learn code while writing it down, and make the transition to head-only copy later on if you need or want to. Am I the only one in hamdom that thinks so?

When you post a simple FS or FA notice to a newgroup in which
the charter permits such postings, and are then abused,
harrassed and called "spammer" by one of these self-appointed
net-cops, you should take it seriously. When you call them on it,
they have a nasty habit of writing to your provider en mass
in an attempt to get your access limited.
They are not usually successful,
but why should you be defamed and slandered to your provider?

You don't have to put up with that sort of net terrorist bullying.
Two can play their nasty little game.
Simply write to "abuse," "postmaster" and/or "support"
at *his* provider, detailing his harrassment and attempt to
force you to conform to his wishes. After a few complaints,
the bullier becomes the bullied, and he'll think twice before
harrassing anyone else.

A letter something like this works well:

TO: postmaster@megsinet.net, abuse@megsinet.net, support@megsinet.net
abuse@berkeley.edu, postmaster@berkeley.edu, support@berkeley.edu

SUBJECT: ABUSIVE USER

Please look into one of your users:

Path: ix.netcom.com!nntp.primenet.com!newsfeed.berkeley.edu!
news.he.net!news.megsinet.net!not-for-mail
Message-ID:
<37xxxxxx.7Axxxxxx@megsinet.net>
From:
"Shifton T. Carp " <carper@megsinet.net>

He is involved in some outfit using the domain

www.we'reincharge.org

that is going around harassing people on Usenet, demanding
that they conform to their personal definition of conduct.
They call people "spammer" who are posting legitimate FS
posts on groups which have provisions for sale posts in their charters.
When ever anyone calls them on it, they write email as a group
to that person's provider, demanding that the person's access be denied.

I'm sure you do not wish to tolerate these "net terrorist"
attitudes and actions by your users.

Kind Regards,
David Stinson

...just a thought - had someone been 'at' this rig for, perhaps, packet use?
Have they bodged (technical term...) the RX audio somewhere for either a fixed
output or directly of the discriminator for 9k6 use?
Good luck,

Not just the FCC is in this nasty little smut ring!
Check out the distribution list in the headers.

Let's see...We've got:
The Health Care Financing Administration...(must be sex therapy?)
The U.S. Senate (no surprise there...)
Johns Hopkins University (for shame... people of such education!)
The Greater Baltimore Medical Center.. (more sex therapy)
Clack Sound Studios of New York (knew the media would be in on it..)
Physicians Online (some of these folks are going to need a doctor)
and Radixnet ISP (they'll claim they're innocent... suuuuure!)

HO HO HAR HAR HAR..... I must say.... (wiping tears from my eyes),
I do love it so when the "elite" people
find that their bare asses have been shining in public....
It's one of life's great joys. HA HA HA HEE HEE!!

Ain't Life Grand,
Dave AB5S

Someone repost the originating article or e-mail it to me. I'd like to forward it to my local tv/media contacts.. this should prove very interesting.

3422. USB/LSB Audio Passband Trimmers in TS940

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-08 00:00:00 UTC
From: BarryG <bgNOSPAM@albany.net>
Message-ID: <7h1b4r$6bb$1@news.monmouth.com>
Source record: 108801

Could someone please give the exact location of the USB/LSB trimmers to adjust the audio passband ("SSB mode Frequency response") in the TS940? Facing the front of the rig with the cover removed, I believe they are located on the top right side on a small board coming back off the front panel above the main boards, but don't know for sure. I'm already familiar with the adjustment procedure (TC4/TC5) from my 930, but would appreciate help locating the trimmers precisely in the 940 (don't have service manual for 940).

Thanks & 73,
Barry N1EU

:>How practical would it be to build a passive up converter so that
:>a 2 metre transmitter can be used on UHF?
:
:What do the 2 metres (sic) read?

You are obviously new to, well, everything. A metre is a measure of distance. Because radio waves travel at approximatly the same speed wherever they go the distance traveled by one cycle can be calculated given a frequency. It is common to refer to an amateur band by the wavelength. Thus the 144 to 148 MHz band is refered to as the 2 metre band. In the USA some people describe their radio by the number of meters it has. However that gives no clue as to the frequency it operates on. Given that almost all new radios have no meters you can expect to see adverts for zero meter radios soon.

:Gary

I hope that helps. You can learn more by doing an English language course followed by a radio course.

Good luck!

Barry

May we assume you have checked the integrity of the cable(s) and connector for any shorts or opens?

May we assume you calculated the input impedance of your rig based on your test results, rather than measuring it? Have you measured at least the ohmic value at the mike input?

You forgot to post the very last post they sent out. Hopefully one they will themselves, abide by. That the person responsible would be dealt with.

It's a shame someone may have lost a good job for doing something so stupid. But they have only themselves to blame.

Not many jobs require a Psychological exam prior to getting it given to the applicant. One never knows when an employee may pull such a stupid stunt to embarass the whole agency/company at large.

"IF" they DON'T do something to correct this, THEN we have plenty of room to question their judgement. Until then, let's see what happens. We may never know, but let's wait and see!

Just "my" opinion.

:"Marconi vs Sarnoff"
:You said it perfectly in those few words, Adam.
:
:Fluid pricing via networked auction is the wave of the future
:in many, many areas- not just in radio stuff.
:Hams are into it early because (contrary to cynical popular myth)
:most hams are progressive people.
:
:The charge of "clogging up the newsgroups" is nonsense.
:Those who wish to participate in the new market can do so.
:Those who do not can set the filters on their browsers
:and they will never even see the deals go by,
:leaving them with the "pure" version they claim to desire.
:
:Bandwidth charges are equally nonsense. The binary groups
:distributing graphic files and programs take up
:thousands of times the bandwidth of the ham groups
:with lots to spare, thank you. If we tripled the
:number of radio ads here, we'd still not be a speck
:on the bandwidth map.
:
:It is useless and senseless to protest against this new market,
:especially when every modern browser is capable of
:deleting messages some people claim they don't want to
:see before they ever see them.
:You don't read every word in a newspaper, either.
:I don't see anyone calling their newspaper and
:complaining "you print some things I don't want to read!"
:That would be silly. It's equally silly to protest
:against newsgroup articles they don't want to read
:when they have the means to simply *not see them*
:right at their fingertips.
:
:People need to stop claiming they are somehow being harmed
:by the sale posts. It just isn't true.
:They're harming themselves by not setting filters
:that were put there for that purpose.
:Same as someone who refuses to wear a seat belt-
:he has no one to blame for his bruised forehead but himself.
:
:Steam engine makers and tube manufacturers protested, too.

:And the future --just-- --kept-- --coming.
:You can stay behind if you wish.
:But don't damn those who choose to progress,
:especially since they are not harming you in any way.

In the future there will be just one newsgroup, alt.everything,
and there will be no charges of off topic or crossposting.
Each of us will set our filters so that we see only what we are
interested in. Of course by then the net will be so clogged with
spam and commercial postings that nothing of interest will get
through. Then people will abandon usenet and the spammers will
have no one to spam. They will give up and the newsgroup will
be empty, which will encourage the real users to return. The
cycle will then repeat itself, unless we can get some sense
into the system before then.

10-4 good buddy.

Barry

Source record: 108812

Tony,

I had one of those quite a while ago. Bought it used and it served me well for several years. Yes it did cover 80-10 meters. No taps for the warc bands but perhaps you might tune it up using an adjacent bandswitch position but I wouldn't recommend it.

It uses two 3-400Z tubes which should put out nearly as much power as the dual 3-500Z amps (Heathkit SB220, Drake L4B, L7B, Kenwood TL-922, etc) which are rated at 2000 watts PEP and 1000 watts CW. The power supply is included in the unit but is slightly underpowered. Mine had a replacement power transformer which held up fine.

Unfortunately mine destroyed its output tank circuit bandswitch (there is no switch in the input circuit). I believe it was due to parasitic oscillations. I found a replacement switch and installed it. When it started to destroy that one, I retired it. There are a few articles I remember written by AG6K ? about taming wild amplifiers which I now feel would have helped me tame this amp.

So, my belief is there are better amps that were manufactured (with regard to a hefty power supply and having a tuned input circuit) and I'm sure I got $300 worth of use out of it. It just wasn't a survivor.

Scott: I wonder if it's possible your had the frequency of your
signal generator at some frequency much lower than voice frequecies.
Perhaps the input stage is transformer coupled, such that the input
impedance is very low at low frequencies. I've done this before...
had the band switch to Hz instead of KHz, and ended up with 1Hz out
instead of the intended 1 KHz. Just an idea...

From: W4UDX <crslex@iglou.com>
Message-ID: <3734741B.44F7E0A4@iglou.com>
Source record: 108827

For Sale: Only until Dayton!

Drake T-4X transmitter, R-4B receiver, AC-4 power supply, MS-4 speaker. Includes interconnecting cables, owners manuals, extra crystals to cover 160, 10 and WARC bands. Dukane desk mike included (looks like a Turner +2).

Descriptions:

T-4X is later model that has VFO dial that matches R-4B. Also has beveled calibrated VFO skirt and TR-7 style VFO spinner knobs (new). New blue filters installed. Has full output with finals which are about a year and a half old. The front panel is in mint condition. All original knobs (except VFO knob). Cabinet is in really nice shape with only a few scuff marks.

R-4B is in like shape. It has extra crystals for WARC bands and to cover 160 and 10 meters. It receives great. Also has TR-7 style VFO spinner knob bought new from Drake just recently. Has new VFO dial background and blue filters installed. Front panel is mint. Cabinet is really good with only a few scuffs. All original knobs except VFO knob. (I have them also).

AC-4 is in really nice shape and works fine.
MS-4 speaker is really nice. Has new 5x7 full range speaker. Front panel is excellent. Cabinet is really nice with no dents, just some scuff marks.

Dukane desk mike is just like a Turner +2 but non-amplified. It is brushed steel and looks super. Has a high impeadence crystal element.

All for $400 plus shipping Postal money order only before Dayton.

Thanks......email: W4UDX@juno.com

3450. (help) Injecting audio into mic plug--strange result--input impedance?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-08 00:00:00 UTC
From: nx7u@primenet.com
Message-ID: <37337fc1.4404132@news.primenet.com>
Source record: 108869
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I wanted to run my IC-551 thru some audio paces, so I dug out a trusty HP-651 audio sig gen which is calibrated in mV and has a 600 ohm output.
Supposedly the IC-551 wants a 600 ohm (or thereabouts) microphone, so that should work, right?
Rigged up a cable, BNC (from the HP-651) to 4-pin mic plug.
Fired it up, and tapped off the sig gen with a BNC "tee" to an audio voltmeter to monitor the actual applied voltage.
With the sig gen initially set to 1 volt (!), all I got out to the mic plug was 1.4mV (that's milli).
I verified the sig gen was OK by placing a 610 ohm resistor across its 600 ohm output; sig gen and outboard audio meters matched up.
This would tell me that the input impedance of the mic jack is <0.5 ohms!!!
Did I do the measurement wrong, or is my audio stage whacked, or is this actually the nominal result?
PS When I hook up a mic and monitor with another receiver, the audio sounds fine. I would think if the audio input impedance was really 0.5 ohms, there would be little mic output to speak of (pun not intended...)
Any observations? Thanks in advance!

MFJ sells a switch box, also cables with the RJ-45 on one end and various TNC
connectors on the other.

I bought a short CAT5 ethernet cable ($5), cut it near the connectors and
spliced into a cable I already had to go to the TNC.

3459. Swan Mark 1 HF Linear Amp Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-08 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <sVNY2.587$qh4.41601@iad-read.news.verio.net>
Source record: 108878

Hello. I have a few questions that I've been wondering about the Swan Mark 1 HF amp. If you can answer any or all of these question please e-mail me. Thanks a lot in advance and any help is appreciated. The questions go as follows:

1. What are the dimensions of the amp?
2. Does it really cover 10m-80m including the WARC or W/O WARC?
3. I've heard that it does 2000w PEP and 1000 CW w/good tubes. True?
4. About how much would a used one in good condition cost today?
5. Does it require anything extra to operate (ie power supply)? And if so about how much would those accessories cost today?
6. And does anyone have a good suggestion of a place where I might be able to find one?
7. And does anyone happen to know of a picture of one on line?

Anything notable about the amp or something else you might happen to know about it I would also love to hear. Thanks for reading!

Dear oms,

Everybody's talking about electronic commerce.
But did you know that a lot of hamradio related equipments can also be purchased on the web?

The site www.geocities.com/SiliconValley/Park/9501 provides links to RX, TX, books about hamradio, computer stuff and more, that can be bought on the web. It also provides powerful search engines.

This site is NOT a commercial site! It's just a hamradio related site at Geocities, whose purpose is to help you to find what you're looking for on the world wide web.

Have fun es vy 73!

>restart and everything comes back on FB.

A spike on the line can trip the overvoltage crowbar circuit. The only way
to reset that is to power down and then back up. That's because the crowbar
is a SCR, and the only way to shut off a SCR once it is triggered is to interrupt
power through it.

Better surge protection on your shack AC power will eliminate this problem.
We use a Sola constant voltage transformer at our repeater site to avoid this
problem. But the crowbar can be tripped by stray RF too. Better bypassing on
the power supply output can stop that. (Better station layout can avoid stray
RF problems in the first place.)

They will be heard, just not understood. Be aware, however, that use of
such equipment is illegal in the amateur service. So offering such devices
in an amateur radio newsgroup is inappropriate, not to mention that offering
for sale items in a discussion group is also inappropriate. The proper
newsgroup to use to offer radio related items for sale is rec.radio.swap
(see the FAQ). The only two newsgroups in the rec.radio hierarchy
whose charters allow for sale advertisements are rec.radio.swap and
rec.radio.amateur.boatanchors. Since your ad is clearly inappropriate
for the latter, try rec.radio.swap. Users of commercial radio services
which allow scrambling also hang out there and might have a legitimate
use for the items you are offering.

By "Nuisance Delete", do you mean CTCSS tones? Just wondering, because one
of the radios we use at work is a P110, and that button turns tone squelch
on and off.

That's an easy question. The TALLEST antenna designed for 2M/440 that you can fit on the radio will give you the best overall results. Try the ANLI al-800 telescoping dual bander, it's the biggest I am aware of that will fit right on an HT.......Good luck!!!!

Dan, thats good information. Most of the long-term hams on Guam used deep cycle batteries floated on a small power supply. You didn't need a typhoon to take out the power there. It went off daily and you became an expert at setting the microwave and vcr timers. Then when the typhoons came, the power was off for days or even weeks.

I understand that a UPS continues to supply power during an outage, but how does your UPS protect your equipment from surges?

BTW, I just purchased an Energizer deep cycle trolling motor battery to use while awaiting the four transistors mentioned above.

>>Nonsense.
>
>You say that because you never got your code speed up, Gary.
>You still hear individual letters being sent. Get your speed up and you'll hear
>words; you won't have to go through the translation process.

Of course I still hear the individual letters. I see individual letters when I
read too, and hear individual phonemes when I listen to speech. That
doesn't affect the speed with which I read English text (over 3,000 WPM)
or the speed with which I can understand spoken English (about 200 WPM).
It does allow me to notice misspellings, and notice when words are
mispronounced. If you can't do those things, then I suppose you really
don't see the letters or hear the phonemes when you read or listen to
speech. That seems a peculiar sort of selective blindness/deafness to
me.

>For example,
>when I was first learning Vietnamese, to understand the phrase:
>"Toi di nha " my mind would have to translate word by word: toi = I,
>di = go, nha = home. Later, after immersion in the language, no such
>translation was necessary. I could understand a sentence, not having to
>consider each individual word.

Fascinating. You can understand a sentence without hearing the words,
or the phonemes that make up the spoken words. I don't know how you
do that. Must be ESP. When I hear speech in German or Russian,
I understand it because the words I hear are part of my German or
Russian vocabulary. I don't hear it in English, because it *isn't* English.
It is actually another language with its own words, syntax, grammar,
and meaning.

That's not the case for English text represented in various forms. It is all
still English language text whether it is represented in an ASCII, Baudot,
or Morse encoding of the Roman alphabet. The words are English, the
syntax is English, the grammar is English, and the meaning is English.
It isn't Morsish.

>Don't give up, Gary.

I never have, and I never will until Morse testing is banished from
amateur radio licensing.

>P.S. R.r.a.equipment dropped from any fol-ups; why didn't you do that?

I followed up William Lee's post in rec.radio.amateur.equipment, and so
my reply went to the groups to which he posted. The only way to ensure
that a reply is read by a poster (or by anyone else who read the original
message) is to follow up to all the groups in which the original message
appeared. If you don't want to see a reply in a particular group, don't
post to that group.

You posted the message to which I'm replying in both equipment
and misc, so I am replying in both equipment and misc. If you'd
wanted a reply only in misc, you should have posted only in misc.
I consider your use of the follow up line an abusive attempt to
get the last word before a particular audience. I won't tolerate that.
If you want to restrict discussion, restrict your own postings first.
I will follow up only to the groups in which they appear, but I will
follow up to every group in which they appear.

Source record: 108661

Figured if anyone knows the answer to my question, it would be HAMS, so here goes...

The other night, lightning hit very close to my house, causing our smoke detectors to sound (due to ionization, I assume) for about fifteen seconds and a very adrenaline-pumped rousal from a sound sleep for all of us.

Checked out the house - the transformer powering our phone answering machine was very hot but the machine still operates fine. The next day, I discovered that an electronic timer was shot, and the tuner section of my stereo receiver <an "always on in standby mode" JVC> was fried. No circuit breakers were tripped but two of three of our GCFI's needed to be reset.

Question - aside from unplugging devices and taking out insurance, what can a person do to add a degree of protection to home electronics from this kind of problem? I realize a lightning strike can just about bridge any gap but I believe that what cooked my gear was an induced current from a nearby strike, rather than a direct hit.

I've shied away from using a lot of powerstrip-style surge protectors as I use an X10 automation system in my house and the strips sometimes interfere with signal transmission.

I read an article several years ago in an electronics magazine about lightning rods, etc. and it said that one thing a person could do is to wrap device line cords around ferrite rods OR, just put eight or ten knots in the power cord leading to the device. Is this an old wives tale?

Thanks,
Jim

Cross-posted to:
rec.radio.amateur.equipment,uk.radio.amateur,rec.radio.amateur.homebrew,aus.radio.amateur.misc,rec.radio.amateur

I recently purchased a Kenwood ts570s. Great radio. I hooked up the remote din plug per the manual to key my homebrew grounded grid amplifier. My amp has a control line and when grounded it keys the amp.

Im using pins 2 and 4 on the din. At first it worked great and keyed the amp 4 or 5 times. Then it stuck in the on mode. It appears that I have approx 1 ohm resistance at all times across pins 2 and 4 which keeps the amp keyed. When keying the mic, it is keying the ts570 relay because I can see pins 2 and 5 opening and closing. I also see between pins 2 and 4 that it always has about 1 ohm but when I key it it reduces to about 1/2 ohm. This makes me believe the relay is working. On the diagram there is a 2200p capacitor (C286) across the relay contacts (pins 2 and4) My guess is that this capacitor has shorted showing the 1 ohm and when the relay keys, it keys across it reducing the resistance to 1/2 ohm.

The amp is a homebrew 813 (X3). The amp switching relay shows about 40 volts across the control line to ground. maybe this is too much voltage and shorted the small surface capacitor.

Any ideas? Can anyone send me a picture of where this 2200p cap C286 is located. I have looked on the board but cant identify it.

Please email me at tcmedlin@cris.com you will have to take the words "NOSPAM" out of my return address.

Thanks and 73,
Tom

Jim,

Try calling R&L Electronics 1-800-221-7735 and as for the KW2000 Power Cord - it will fit most all Alinco, Icom, Kenwood, Yaesu HF rigs with the 6 pin Molex connector. The price is $14.95

The web site is located at http://randl.com e-mail address of: sales@randl.com

I hope this meets you needs. I have no connection with this business, but the add is in QST, May 99 issue page 163.

Source record: 108666

For Sale: Only until Dayton!

Drake T-4X transmitter, R-4B receiver, AC-4 power supply, MS-4 speaker. Includes interconnecting cables, owners manuals, extra crystals to cover 160, 10 and WARC bands. Dukane desk mike included (looks like a Turner +2).

Descriptions:

T-4X is later model that has VFO dial that matches R-4B. Also has beveled calibrated VFO skirt and TR-7 style VFO spinner knobs (new). New blue filters installed. Has full output with finals which are about a year and a half old. The front panel is in mint condition. All original knobs (except VFO knob). Cabinet is in really nice shape with only a few scuff marks.

R-4B is in like shape. It has extra crystals for WARC bands and to cover 160 and 10 meters. It receives great. Also has TR-7 style VFO spinner knob bought new from Drake just recently. Has new VFO dial background and blue filters installed. Front panel is mint. Cabinet is really good with only a few scuffs. All original knobs except VFO knob. (I have them also).

AC-4 is in really nice shape and works fine.
MS-4 speaker is really nice. Has new 5x7 full range speaker. Front panel is excellent. Cabinet is really nice with no dents, just some scuff marks.

Dukane desk mike is just like a Turner +2 but non-amplified. It is brushed steel and looks super. Has a high impeadence crystal element.

All for $400 plus shipping Postal money order only before Dayton.

Thanks......email: W4UDX@juno.com

Source record: 108667

My opinion is that the W32A is a good idea, but there are some dogs in the field which suffer from the following problems:

1. Low transmit audio;
2. Poor receiver performance;
3. Substantial signal attentuation when radio is connected to an external antenna.

Many users report having none of these problems. Many users report all of these problems. If you purchase a used one, makes sure it suffers from none of the three above. If you purchase a new one, be prepared to part with it for warranty work, although its not known whether ICOM can or will fix the problems.

Hmmmm, cloning copyrighted EEPROMS's (and SELLING them too ?!?!),
what a dumbass ! (say hello to that twit posting received MDT
traffic on his website for us, and the Cheeks to !).....

I suspect the Moto IPP division will be notifying the US Marshalls,
USSS, and they're going to be busting your door down pretty soon...
And for what ? A lousy $150 ? IDIOT !!

Hmm, unless you're just selling a bunch of "genuine" Moto upgrade
kits ? Well, too late now...your now a big red blip on Motorola's
copyright protection/intellectual property protection radar....
and at the very least, they're going to be looking into this to
see if your legit.

Testes, testes, Hansel.

It lowers FCC's moral standing to harass Whiten, if these sorts of things are
done right there at FCC. Ed W1RFI seems pretty clear on ARRL's e-mail policy.
Why is the FCC and Senator Dodd's office staff not ?

What right do they have to waste taxpayers' money on this crap ?

And no, I never use ours for private e-mail. I'm not so cheap or stupid that I
don't spent money on a home account.

Astron makes a small board that can be added to the power supply to
automatically reset it. Or they will furnish the schematic and you can build
it.

3514. IC-551: Known SSB/AM TX audio issues?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-09 00:00:00 UTC
From: nx7u@primenet.com
Message-ID: <3735f644.24670804@news.primenet.com>
Source record: 108683

Generic question: is the IC-551 known for problems with its transmit audio on SSB or AM?
Single tone testing of my rig looks great on LSB, but on USB it's pure crap on the spectrum analyzer...almost looks like some carrier is still in the mix. AM looks pretty asymmetrical too.
I'm getting ready to dig into it, just wanted to know if there was a known "design flaw" or weakness that's already been discovered...trying not to re-invent the wheel (for the thousandth time)!
Thanks in advance,

3521. Why VX5 has 729-800 block

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-09 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <3736047A.CAC2A7D9@quantacorp.com>
Source record: 108690

Info from unpublishable, but reliable source:

1. The VX-5 has the following IF and shifts for the bands:

From To vco=F+/-IF

0.5 1.8 +
1.8 16 +
48 76 +
76 130 +
130 140 +
140 150 +
150 174 +
174 210 -
210 250 -
250 300 +
300 380 +
380 460 -
460 540 -
540 580 -
580 800 +
800 860 -
860 999 -

2. Cellular block, per FCC, is (roughly) 824-849 and 869-894.

2a. Direct frequencies: 824-849 869-894. Everyone can understand that. Early on, Yaesu woudl only block these, and by jumpers. Someone found jumpers, others remembered the images...

2b. Images: First a quick explanation, since not everyone with a license seems to understand it correctly. I'll give numeric examples for 879MHz. Skip the whole bs if you just want the numbers.

=====$begin bs==========
The simplest AM radio would simply tune by narrowly filtering a desired frequency (a 874-884 bandpass filter would be needed), then detect envelope and send to the speaker. While this still works and will amaze your kids with a Galena radio (or, nowadays, a single commercial diode radio), it has its drawbacks... :-)

The next simple radio works by beat (mix,multiply) the rx signal with an oscillator at 879, producing products that are the rx signal shifted to 1.758GHz(A+B) and another at '0'(A-B), which is our baseband signal. In fact, for AM, this signal can go to the speaker directly. This is called direct conversion, and has many advantages, the main one being that a tunable, narrow filter as the 874-884 above

would be prohibitively expensive, as well as requiring many different ones, for different frequency ranges. Nowadays it also allow the convenience of entering a frequency numerically, and a pll synthesizes precisely that frequency. Years (10,20?) ago, you would turn the dial to a place that would give you a frequency close to what you wanted, then you would fine-tune it by finding the signal. You would use beacons to calibrate your dial. Then came digital, crystal-based frequency meters that would display you the accurate frequncy, but you would still have to turn that dial to get the oscillator precisely where you wanted. 'New' hams, used to simply entering a frequency as easily as they dialed the phone-order discount ham store, don't realize the breakthrough that digital pll synthesized frequencies was. And, again, that one small idea followed another tiny idea of years earlier to produce a neat system that is now enjoyed by many. Small ideas that might, or could have come from curious hams in their spare time. I think more and more hams need to open their radios, modify them, improve them, share experiences and experiments.

Off the soapbox, back to the question. A better radio uses dual conversion, where instead of beating the desired signal (879) with the same frequency, it is instead beaten with, say, 45MHz below (834). The products are now 45 and 2F-45 (1713) (filtered out). This product always at 45Mhz, the Intermediate Frequency (IF), can now pass through filters (fixed, inexpensive, as narrow as wanted), detection, whatever before being then mixed (beat,multiplied) with 45Mhz to give the final desired output. This is what the VX-5 (and 99% of current radios) uses.

One side effect of direct conversion is that 'images' appear, for the following reason:

Trying to tune 879, my radio with 45Mhz IF will oscillate at 834, filter the 45 and process it. What happens is that the difference product will be 45 for 879, and '-45' for a 789Mhz signal also present at the antenna. So, you can see that although my display shows 879, I am listening to 879 AND 789 signals. The simple way of getting rid of the 789 would be a tunable band pass filter much narrower than one IF (meaning tunable filters are still needed, but much less narrow, expensive ones). The VX-5 has these filters, tuned with ~1MHz resolution, for four different ranges, but apparently they are too wide in the 520-999 range. Images come in almost as clear as the signal.

=====$end bs==========

Images in the 800-999 band. F can be listened on F (surprise), and also on F+2IF. (as 789 was listened when tuning 879).

824-849 will also be listened to by tuning 918.5-943.5 (nfm). Yaesu blocks 918-944.
869-894 would also be on 963.5-988.5. Yaesu blocks 963-989.

Case ended? Nope. Here comes that table above. Because from 580-800 the radio uses F+IF and not F-IF. So in that range you will listen images coming from above the displayed frequency. 879, for instance, would also come in when the radio showed 784.5. Here are the two image ranges:

824-849 also appears on 729.5-754.5
869-894 also appears on 774.5-799.5

My sources say Yaesu engineers were getting tired of all these software changes because of curious users with too much spare time (while they were working late shifts with no extra pay), and decided to slash the whole 729-800 range, in a mix of anger and envy... (some speculation added for dramatic purposes)

By the way, if you read until here, the FT-50 (for sure) and possibly the VX-1s will have similar images, they all share the same design ideas. Ooops, now they will slash some 70M out of those radios, too! (Did it ever occur to them making a better image filter, a higher IF, whatever?)

Is this all? Nope. There is also WFM, with a different IF:45.8.
Images for wfm mode are:
732.4-757.4, 777.4-802.4, 915.6-940.6 and 960.6-985.6. This is not completely blocked (OOps, ther it go again, now they will HAVE to cut out another few MHz here and there), as 800-802.4, 915.6-918 and 960.6-963 are still there. Remebering also that a 1.6M extra is attainable by software, the frequencies still unblocked in the VX-5 (FCC, take note) are:

Tuning: Will listen:
800 - 802.4 891.6 - 894
915.6 - 918 824 - 826.4 (828 with software)
960.6 - 963 869 - 871.4 (873 with software)

So it appears that there will be a new CPU version for the Yaesu HTs. If they don't do it, the FCC might learn about this and ban the sale of these radios.

Now back to what ham radio is about, in my opinion. I agree that cell phones could have used available, inexpensive technology to protect their customer's privacy a little better. I also agree that I, you, your neighbor, his cheating wife, etc, have right to privacy when on the cell phone. It is a pity that more and more blocks have to be put in place (jumpers, diodes, firmware, etc.) to prevent people from listening. (You with the 'it's my airwaves, invading my house' argument go back to watching some porno with your pirate cable box). It is also a pity that it took a big politician detailing his wrongdoing for this to be enforced. It is ILLEGAL, and that should not be viewed as a government imposition, but as something WE need and ask them to enforce to protect OUR privacy.

That's why I posted the few remaining gaps for the VX-5, and the HUGE ones in the ft-50 (even the newest ones), for Yaesu to block it. I

only posted all this bs, also, using the cell-block lure to teach some conversion techniques, IF images, etc. to many licensed amateurs that haven't had the chance to explore the inner workings of its gadget and see that it is another involving, pleasant part of this hobby. If you just like to compare the 'features' of your latest radio until the next one comes along, sorry for bothering.

If you are one of the losers just interested in listening to cellular (no to be confounded with the ones interested in the challenge of 'opening' the radio), be content with listening your neighbor's baby monitor, 729-800 and cell is blocked BY FIRMWARE on all USA radios. There is no jumper, clone data, key sequence that will allow it.

Jose
(with help from 'Dip')

Perhaps I should have said power line transients and/or lightning strikes. I cannot say specifically how the UPS accomplishes this because I do not have a schematic to anaylze, but the company guarantees against equipment loss as a result of these things. You might want to go to APC's web site http://www.apcc.com/ for additional details and specifications.

By the way, there are a lot of companies who make a UPS, but having worked for the last 10 years as a computer field engineer I have observed that the overwhelming majority of UPS's I see on any critical network server or workstation are always APC's.

For Sale Icom IC-706 MKII HF+6+2 meters in mint condition. Radio has DSP installed and comes complete with mic, manual, power cord and factory shipping box. $850

3524. HELP: TS-520 internal digital display

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-09 00:00:00 UTC
From: "Paul A. Elliott" <n7ijb@gte.net>
Message-ID: <B8pZ2.5430$ax4.307488@dfiatx1-snr1.gtei.net>
Source record: 108693

I recently bought a TS-520 that has an internal digital display !!

I need a circuit diagram for the display board's.

(I know they didn't make such a critter) however this one has the display and the Henry Radio receipt that was in the manual and is dated 12/11/75 says (1) Kenwood TS520 DIGITAL. the receipt also says in the margin, Note: customer to return radio for modification after Jan 1, 1976 so I am assuming that Henry Radio provided this mod.

The additional circuit board's are definitely not home grown.

I have also emailed Henry Radio but after almost 25 years I figure most of the Henry employees would be gone and it is more likely that there is a ham out there that has info on this mod. Covering all the bases!

The radio works fine but the display which has (4) led's is on but does not change reading while tuning.

Any information would be appreciated.
Thanks

Paul N7IJB

> I just finished giving my seven year old his code lesson. He's learning the
> code to earn a award in his Tiger Cub Scout group. He is a seven year old
> that came to me to learn the code, and has no interest in radio,

Well why not FORCE him to learn about radio before he can use morse
code? It is ok for him to want to learn Morse Code and not anything
about radio, but not the other way around?!

I would
> think that anyone who is interested in radio should stop crying about it and
> donate the 15 minutes a night for 2 weeks, and learn it.

If your son doesn't have to learn or like radio to enjoy Morse Code,
then people who want to use or like radio do not have to learn Morse
Code.

> No one complains about having to learn how to use windows before they can
> surf the net....

Of course not, no one complains about having to learn how to use a ham
radio before surfing the repeaters either, but what if you made them
learn Russian before they were allowed to use the internet? Then you
would get the same complaints.

The best analogy would be having to learn Morse Code in order to use the internet, as Morse Code has as much to do with knowing how to operate and work the internet as it does with knowing how to operate and work a Ham radio.

3529. Re: Grounding all equipment in shack to single ground bus

You should consider the electrical ground as not being related to the antenna ground.
Keep the electrical ground as short as possable to keep from getting RF "bites".
I use two 8 foot ground rods just outside the window behind the radio equipment.
My Radio / Tuner is grounded to them using a 1 inch wide flat braided wire that is about 5 foot in total length.

Well Gary..... it is on eBay. That should tell you something.
I have done a lot of trading over the years and I always got a kick from someone who would not give you a price for something they had for sale. You know the kind..... when you ask how much they want they ask how much will you offer. Thats when I offer about half of what I would have paid and watch their reaction. That kinda backfired on me once and I had to buy a mint Kenwood TS-140S for $150.00 !

Hi Monte,

Yes, I have one and it is a great radio! I've worked all sorts of DX in the last 2 weeks (UA0, SV5, 7X2--on 10 meters) and I've received great reports. The menus are easy to navigate, the DSP works well, and the 2M/440 FM modes work well too. I highly recommend it.

On another note, the FC20 antenna tuner that you might want to buy with it is on backorder with every dealer. Still waiting for mine.

If it would have been anyone else in any other FCC Bureau or Office it would have blown over. But it came from the Office of Public Affairs to the distribution list of the FCC Daily Digest which is directed e-mail subscribed to and read by regulatory professionals world-wide, and it carried the name of the person who is most associated with said distribution.

Much too public, and as far back as I can remember to the advent of the Commission;s e-mail system in 1995, the rule was "keep your personal stuff off the net". We had numerous instances of folks posting "for sale" items agency-wide and it took some disciplinary action to get that to stop.

It's bad enough when it's only inside the firewall, but when it gets out to the Wide World .... YaZowieee......

I have great news for you! You CAN become a ham without learning Morse code. Looking at FCC Part 97, you can qualify for a Technician's license with only a written procedure and absolutely minimal theory test. No Morse code test!

It seems your wish has been granted, and quite some time ago at that. Run on over to your nearest VEC testing facility. There's no need to stop to thank me.

Michael.

True enough; however, it has everything to do with the es-prit de corps of ham radio. Knowing that one has gone through, and survived, the identical trials and tribulations of his or her counterparts, builds a unique bond of dedication and purpose. The instant gratification crowd of today has no appreciation for that bond.

Now that sounds like a plan, a Morse code test to get on the internet
would keep some of you no-code peckerwoods out of the DX newsgroup
and about a half dozen other ones this 'discussion' doesn't belong in.

Is it REALLY necessary to post this crap to every ham newsgroup there
is ? Some of us have already learned Morse code, we aren't looking for
any good reasons not to....

Does anyone know how I can find a "1N" number for the high voltage diodes in Heathkit Oscilloscope Model IO-4555? Their part number for them is: SCM-30.

Thanks.

I'm on my third Macintosh, 266 mhz one that performs like a 350 mhz PC. I have had no such problems with my Macs even when they are next to the rig.

However, following general principles, you might want to determine if the RFI is being radiated, conducted, or both. Then you can begin the solution.

My rigs were disconnected from the antennas, but I didn't pull the plug on my Astron 35A. It was turned off, but still got zapped by a nearby strike. It blew the fuse, blew apart the MOV, took out the regulator chip, and one of the transistors. I've replaced the fuse, MOV, and 783, but waiting for four replacement transistors in the mail. I've been told to replace all four transistors of the same kind.

Brian

This transmiter was built by an electronics company along with 11 others.
Some were never used, it is hard to say if this was ever used as it is in
PERFECT condition.
It has a modification, the builder installed a fan on the 6146 tubes,and two
BNC connectors to get the drive signal out on one connector in on the other.
No big deal, a short rg58 compleets the circuit.
The unit is in "collectors condition"
$125 + shiping will do

Hi All,

I have 2 MX com scrambling boards. These units install in almost any Mobile or portable radio, including many Motorola radios. These units will allow the two people using them to not be heard by others. These units will work through any repeater. I am looking for $100.00 for the pair, OBO, and I will ship them in CONUS. Please don't hesitate to make an offer.

I am looking for VHF and UHF repeater equipment, if you have any, let me know and maybe we can trade.

Thanx
Mike

3567. ++++FS or Trade:2 Saber 1's UHF PRICE REDUCED++++

Source record: 108771

Hi All,

I have 2 Motorola Saber 1's, both in good to great condition, at least a 7 on a 10 scale, possibly better. currently one is in the 458 to 490 range, while the other is in the 440 to 470 range, although I can supply either of them in any range, your choice. I am looking for $250.00 for each of them, plus shipping, OR BEST OFFER, please make me an offer, I would really like to get rid of them. However, don't be insulted if I ignore a $50.00 offer, please be realistic, as I will be realistic also. I will certainly do better if you take both.
They include batteries and antennas. I would consider trading one or both for part or whole payment of a VHF duplexer, needs to have at least a power rating of 150 watts, standard HAM split, and be complete. Also should be band pass/band reject. I am also looking for a UHF repeater and UHF and VHF repeater equipment. Let me know what you got.

Thanx
Mike

All four of my Astrons are setup as follows:

Every piece of gear in my shack is powered from a large computer UPS which I modified to charge my backup batteries, and it also uses them to supplement its' internal UPS battery during an outage. This setup is automatic, and has proven itself during both lightning storms as well as frequent power outages.

The battery setup consists of four paralleled 670 MCA deep cycle marine batteries, which will provide 120 amps continuous (my gear draws a lot less than this) for three hours straight before significant voltage drop. I have run all the gear in the shack (except the HF amp) for over 15 hours at about a 10 percent transmit duty cycle with this setup with no problems. And the best part of the deal is that the maker of the UPS (APC) provides for up to $20,000 replacement value for any equipment that is damaged by lightning while connected to their UPS.

The cost for the UPS and the batteries was around $500.00, a lot less than replacing even one of the HF rigs...

It might be easier to talk to the dealer you bought the radio from
before going to Icom. I friend of mine bought a new W32A some time
back and we found that the receiver was rather deaf. He took it back
to the dealer who swapped it right out. His new W32A performs
wonderfully.

The SE was the last model 520 kenwood put out. It was a "basic version"
with no digital readout. In fact, I have never seen a 520 with a built
in readout. So I think probably this was an option that henry came up
with. Maybe they modified the external readout that was sold with the
520. "DG-5" to work internally. MK

Please don't forget the Atlanta ham fest on June 5 and 6. It will be held at Miller Park, in Marietta, Ga. There will be room for seven thousand cars. There will be an active flee market. We have 180 commercial tables and many of them are already gone. If you are interested in commercial tables at $20.00 each then contact Ben Dasher, ke4yzx at bdasher@mindspring.com and if you are interested in flee market spaces at $10.00 each, contact Gars, P. O. box 88 Lilburn, Ga. 30048-0088. For other information, contact John Fearon w4wkp at john@negia.net. We hope that this ham fest will prove to be one of the best and most enjoyable fest we have had in recent years. By the way, the admission will be $5.00 each. There will be food on site. Come one come all. 73 John Fearon, w4wkp

My understanding of why we still have morse code as a requirement is simply because of international agreements. In order to work DX, the ITU still requires a code proficiency. What speed varies with the country issuing the license, so the FCC could easily reduce the speed, but there would still be the minimum requirement.

I consider myself an "appliance operator" and haven't used code for a long time. I am one of those that would like to see it dropped as well. We are not preserving a tradition, trying to keep anyone out, or making ourselves an exclusive group. Amateur radio should advance the radio art, have a trained pool of operators for emergencies, and improve international relations. These can be done without CW, but until the ITU changes its policy, the FCC has no choice.

Standard C156a 2M ht
BayPac Multimode Modem
radio interface cable
Toshiba 2000 laptop (386 processor) + power supply
Baypac DOS software

Will sell all for $225 shipped but prefer to trade for some 6 meter gear.
Here's what I am looking for:

6m SSB rig or older all mode (Icom, Yaesu, Kenwood)
or Mirage 1015 6m all-mode amplifier
or possibly MFJ 9406 "adventure" radio

I've already got the 6m FM side covered, so I don't need anything like the
DR-M06 or Azden

Let me know what you've got...

If it were a Molex or Amphenol connector making a cable would be
easy but it is NOT a Molex connector. Grab your Newark catalog
and look up Molex 6 pin connectors you will find that the non-
round holes in the housing are in different pattern. Your
advice about just buying a factory power cord is good as these
connectors are difficult to get in the US.

You might contact Tower Electronics in Green Bay, WI----they attend many large Hamfests around the country and have a sign in their booth that they sell the connectors. Several years ago, I got some similar connectors from a Molex Sales Rep I know and modified them to work for my 706, but it was not a perfect fit. The Japanese/Icom connectors ARE different than any US made connector. I eventually ended buying some shells and pins from a local Icom dealer and made my own. The pins are of a different diameter than the American pins as well.

Paul,

Can't help you. I had a TS-520 at one time, but it was not the digital model. There was an outboard digital display available, though.

But I seem to recall that a model with digital display was released later.

I believe Henry Radio is out of the Ham business as of a year of two ago.

Suggest you call Kenwood Parts West in LA area (1-800-262-1312) and see if they have a service manual for that model; make sure it is the one with the digital display (assuming my memory is correct!). Model might be a TS-520SE.

But Don did say he was operating mobile CW; best *not* write it down,
methinks!

I'm a bit in between; write down name, qth, rst, etc. -- but usually
head-copy the rest.

> in their heads have difficulty with copying 10 wpm qsos.

And with that: Too slow and you cannot copy words, only letters; then I must write it all down.

Phil

I don't use a rf ground to my rigs at all. Not needed in my case. If I have rf problems in the shack I look at the antennas and feedlines coming into the shack before anything else. You shouldn't have a high rf environment to begin with. Trying to cure this problem with ground wires is the wrong way to go. It should be dealt with at the source. Which is usually the antenna or feedline, or other feeds from other antennas coming into the shack. MK

I have used a deep cycle on my IC-730 for almost ten years. I use a 3
amp trickle charger, and works fine. Mine is an energizer 115 A/H. I can
run the 730 off of it for hours. At home, is handy if the power goes
out. I have an inverter that can power a light /TV etc. I have used it a
few times. It's kinda nice when the whole street has the power knocked
out, and I can still watch the tube. MK

> on the air!

Yep, I think thats the JA domestic version. I guess the same, assumming it's a 100w radio same as the US version. Many JA versions were low power. On the 520 or any kenwood hybrid rig:
1:Put meter to ALC
2:mode to tune
3:set plate to appx position shaded for the band you are on. Set LOAD to about 1/3 scale.
4:Key rig, add CAR drive to show indication on meter. Adjust DRIVE for peak ALC on meter. Unkey rig.
5:Switch meter to IP
6:key rig again, and tune PLATE for minimum IP current.
7:Switch MODE to CW
8:Key rig, add CAR drive until indication on meter peaks, and tune PLATE for minimum IP current. If below 200 mils increase load and redip PLATE. If over 200 mils decrease LOAD control and redip PLATE. With a normal 520 etc, full power will be with appx 200-230 mils depending on the rig and tubes. If you have a wattmeter you can use it and tune for full output. You will notice if you tune for full output, and then look at then IP current it should be 200-230 mils. This is a good indicator of loading. If you show less than 200, you are not fully loaded . If you show more than 230 or so, you are overloaded. This makes for a real clean signal, but can make your tubes run a little hot. But it is MUCH more desirable to be overloaded than under loaded. Underloading can cause flat topping and interference to people nearby your frequency. The last 520 I had ran at 200-210 mils fully loaded. My 830 loads to about 220 or so. Nearly the same for all practical purposes. You can also use the relative RF METER setting if you need a RF indication of when you have maximum output if you don't have a watt meter. You will notice maximum output occurs at the same point in tuning as minimum plate/IP current. Or at least it should if the tubes are neutralized correctly.

One other thing about hybrid kenwoods, YOU MUST do final tuning in CW mode in order to fully load the rig. Doing a tuneup only in tune mode will leave you underloaded as the screen is reduced. This will leave you in a good position for the splatter award of the year...g MK

>Ufer ground point in the garage? All the ham books suggest ground rods as
>close to the station as possible, are they referring just to antenna ground?

Antenna grounds, if needed, should be as close to the antenna feedpoint
as possible. But most antennas used by amateurs, IE dipoles, beams, etc,
are balanced and don't require a ground at all in order to function properly.
Let me repeat that, balanced antennas don't require a ground at all in order
to function properly. If connecting a ground to the station changes things
with a balanced antenna, there is a problem with the antenna which needs
to be corrected. The most common problem is common mode currents
on the feedline caused by failure to use a choke balun at the antenna
feedpoint.

There are two commonly used unbalanced antennas, the vertical and the
end fed random wire. They do need a ground to work properly. The ground
for a vertical needs to be physically right at the base of the antenna (if the
vertical is elevated above Earth, radials must be supplied at the feedpoint
to form a groundplane which substitutes for an actual Earth connection).
A ground at the station equipment is irrelevant to the operation of a vertical
antenna.

If adding a ground at the station changes things, then there is something
wrong with the vertical antenna installation, and it should be corrected.
Again, the most common problem is common mode currents on the feedline.
A choke unun should be used at the antenna feedpoint to deal with this. (A
choke unun and a choke balun are physically the same device, but are named
differently depending on how they are used.)

The ground for an end fed random wire needs to be right at the feedpoint,
which may actually be in the station at the antenna tuner. If a ground
cannot physically be supplied there (perhaps because the station itself
is located some distance above Earth), a counterpoise can be substituted.
So only the latter sort of antenna imposes any RF grounding requirement
at the station itself, and even in that case substitution may be used to
eliminate the need for an immediate Earth connection. (But I strongly
discourage the use of this sort of antenna if lightning is an issue. This
sort of antenna brings lightning right into the shack at full strength.)

Safety grounding is adequately handled by the third wire in the AC outlet.
No further action is required for that.

Now we come to lightning protective grounding. This is a more complex
subject, and has to be treated carefully. Lightning currents and voltages
are so high that we cannot hope to protect our equipment by shunt paths

to Earth alone. Even if your station is mere inches from Earth, you can't get a low enough impedance connection to shunt all energy away from your equipment. Still, we'd like to shunt as much of it as possible away from the equipment so that our other protective measures don't have to work as hard. So we want to supply as direct and as good a ground as we possibly can to serve as a shunt path to Earth.

As I noted in my previous post, lightning can be modeled as an 18 kA constant current fast risetime pulse, IE RF, so we need to use RF grounding practices to shunt it to Earth. The primary factor of concern is the inductance of the grounding lead. We need this to be as low as possible. A straight conductor has less inductance than a coil, so we want our grounding lead to be as straight as possible, and we want to avoid any sharp bends. If we must bend the wire, we want to use the largest and gentlest curve we can. Even a straight wire has inductance, and the longer it is, the more inductance it has. So we also want the grounding lead to be as short as possible. As a rule of thumb, anything over 3 feet long is probably too long to be very effective as a shunt ground lead.

Now ideally, we want this shunt ground to be as close to the source of the lightning pulse as possible. That means that it should connect to the antenna feedpoint. Or failing that, we want it to connect to the antenna transmission line *before* it enters the station. It is strongly recommended that antenna feeders be brought right down to Earth and suppressed there before being led over to the station.

At the station itself, we depend on ground windowing technique to equalize potentials on all cabling entering and leaving the station. Ground windowing employs a single point to which all cables are either bonded, or suppressed if they are nominally "hot". This means *every* cable entering or leaving the station area, emphatically including AC power. You must *not* plug equipment directly into the wall. Power must be led over to the single point, suppressed there, and then brought to a distribution strip for the equipment.

The reason a ground window works is that it forces the potentials between cables to be the same, or at least the same to within the normal operating potentials of the cables as set by the suppressors. With no potential difference, there can be no damaging currents forced through station equipment. Everything floats up and down *together* at a common potential during a strike. Like a bird sitting on a high tension wire, no harm is caused by this.

Now the ground window is typically a heavy copper plate which has all the suppressors and bonding lugs mounted on it in symmetric fashion around a lug which is then connected to Earth. This lead to Earth is generally *not* our lightning shunt ground. That's out by the antennas as explained above. The purpose of this ground connection is to suppress sideflashing. This grounding lead only has to keep the potential to Earth below about 1 kV per inch. So it can be somewhat longer than a shunt ground lead.

As noted in the previous post, a straight #10 wire to a good Earth ground, such as your Ufer, is sufficient. But, and this is very important, this should not be the only ground you have. The shunt grounds out at the antennas must exist as well, or you'll have millions of volts here during a strike instead of just thousands. Thousands we can handle, millions we cannot.

Now according to the NEC, all premises grounds must be bonded together. The purpose of this is to *short out* external ground loops caused by Earth currents. In order to do this, all grounds must be connected together star fashion to an exterior single point chosen to make such wiring convenient. That means in most cases one of the grounds which is most centrally located will be used as the external single point. This is where we'd prefer to connect our ground window grounding lead if that doesn't make the run too long. If your Ufer connection is centrally located, it can serve as this single point.

Interior to the station, all equipment grounds must connect to the ground window, and *only* to the ground window. No exceptions. This prevents the ground loops that bus grounds and other sorts of daisy chain connections can cause. Note this does not mean that interconnecting coaxes between pieces of equipment must go to the ground window, their shields are only nominally ground by convention and aren't actually grounding conductors. The single point formed by the ground window will short out any potentials that might otherwise be developed across interconnecting shields by equalizing the potentials on all of the equipment chassis.

Pretty much. What you want to do is install a whole house suppressor
in your service entrance panel. Since you aren't a ham and don't have
to deal with external antennas, the lightning spikes are going to come
into your house on the power, telephone, and CATV lines. You need
to suppress these where they enter the house. A number of companies
make suppressors for power, telco, and CATV use. One of the best
is Polyphaser (800-325-7170). There are less expensive alternatives
if you're qualified to judge what is good and what is junk, but you can
be confident that none of Polyphaser's equipment is junk. Have a
qualified electrician do the installation, ideally an electrician familiar
with lightning suppression wiring practices. Polyphaser has a book
which explains how to properly protect against lightning. It costs
about $22. It is well worth the money.

> Thanks, Eric

Well, you could do it that way, but that's not the way it is generally done. Normally, you take one radio and separate it into a transmit strip and a receiver strip (old Motorola and GE trunk mount radios are ideal for this). These two strips are then connected to a duplexer which allows them to use a single antenna. The duplexer is just a fancy bunch of cavity filters to prevent the transmit signal from getting into the receiver and desensing it. Then you need a controller to make everything play together. These are typically microprocessor controlled these days with all sorts of remote control functions, but a simple COR, timeout timer, and IDer can suffice. Then you need that power supply of course.

The ARRL Handbook has a chapter on repeater operation which goes into this in more detail.

hi,
I know little about short-wave.
My question is:
is there any short-wave transceiver can send and receive data around
worldwide.
or at least can be used in a nation wide(1000 miles).
I want this instrument have computer control interface such as RS232.
if you can help, would you like to tell me the product's name.

BR

It was a very human mistake.... one any of us might make
given the typical 12-16 hour work days in those positions.
I wrote letters to every commissioner, the FCC public
affairs office and their personnel office asking
that they show a little mercy-- I encourage others to do so.
It's easy to sit on our butts and scream "I'm offended!'
when we aren't the one facing a ruined career.
There but for the grace of God....
Disipline, yes; There are lots of measures that will
bring about some real contrition.
But nothing is served by severing the head
of someone who has otherwise done well.

To answer your question, no. You would need to by a HF transceiver. To operate this radio you have to obtain an amateur radio license or (HAM Radio License). The newer rigs come with RS232 interfaces to enable you to work in digital modes. This can also be done with the older rigs, but additional equipment would be needed.

No.
The wave propagation on shortwave is too dependent
on day/of/time, season, direction,sun activity,noise-man made and
natural, and many other circumstances.
No, you can't make a shortwave LAN easily.
Slow data transmissions are possible of course,
but you won't get a license.
W.

Hi,
These filters are made by Kokusai International, Co. in Japan and can be replaced with Collins mechanical filters as long as you terminate with correct capacitors which is 130pf in most of the later version. But Collins filter is so expensive!
It is a common thing that Kokusai filter gone bad. Ceramic filter impedance is very low, meaning you need to match the impedance.
Good luck.

I have a ham pal in Cayman Islands who is looking for the above Rx, which used to be a common Main Station MF/HF receiver on deep sea ships.

If you can provide any info or availablity of this model we would be greatly appreciative=

3652. TS-850 Display question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-10 00:00:00 UTC
From: Tim <k2tf@snip.net>
Message-ID: <37372838.C84872BA@snip.net>
Source record: 108623

When I power up my 850S, the display does not light until ~5 seconds
after the rig is turned on. I do hear audio (signals) from the
speaker. Does anyone here know if this is normal?

Thanks,
Tim

A lot of the Icom radios use a condenser microphone and require some voltage to function. Most of the time this voltage is also sent up the audio lead. Maybe your signal generator is working against this DC level. Might try isolating the DC component with a capacitor?

73,

NE5AL

Sir: I don't get it! This message was passed over secure lines, being read by people, just plain people like yourself. They didn't transmit it over the airwaves that can be picked up not only by amateurs and lowely little CBers like myself. But by the YLs and children in the vicinity of ones shack. Tell me where you are going with this. You have the right to speak your mind even over the airwaves. But, in a civilized manner, that is what you would expect of your children, right!!!! Cry over something like the children killing other children just because they are atheletes and give the rest of us a break.

Cross-posted to:
rec.radio.amateur.misc,alt.tv.tech.plain-tv,rec.radio.amateur.equipment,alt.radio.digital,rec.radio.amateur.homebrew

I am a university math/cs student. Years ago I learned how to program GPIB
devices (using a library) and custom RS-232 to switch a device on and off.

I'd like to get a DAC/ADC card that would be suitable for capturing analog (NTSC and FM/AM) signals for use as a PC card. The idea is as much in software as possible, including interpretation of color bursts, carriers, etc, treating
a digital clipped signal as a bitstream, and control of frequency tuning. Just a plain vanilla DAC/ADC with a plain vanilla driver. This I believe would be a similar
setup to the converter included in NeXTStep PC's. (?)

I'm seeking advice as to what I need "on the other side" of the card to control
gamma correction/gain, and especially basic analog knowledge as pertains to
communications equipment. I know *of* these things, not any specifics. Any
suggestions/directions?

Thank you in advance.

Adolfo,
I think the radio you have is a Standard GX-3000V. If so, it is a
64chan, scanning, EPROM programmed, 40W, VHF-FM transceiver. All the
info on freqs (RX+TX), the CTCSS, chan. number, priority chan, etc. are
all burned into a 2716 EPROM. You will have to erase the eprom and
"burn" in the new data. Hope that helps.

Joe-
I did the same compare a month or two ago... I ended up with the VX-5R. damn it is a nice radio. The main reason I went was it is small, light, always able to TX 5 watts, unlike the 50 which needs to have the 9.6 volt battery to TX 5 watts . which makes the 50 very heavy and big.. the 50 is like holding a football. very hard to reach around with your hand.. almost need two hands. The VX-5R does the same but much more.. The barries seem to last for days on the VX-5R. If you TX a lot it will run down. Yet, it will last much longer then any Ni-Cad battery that you can run on the 50. The VX-5R back-lit buttons are really nice.. which that 50 dosn't have .. There is nothing that I don't like about the VX-5R. they did have some problems when they first came out.. But, they are now all taken care of.. I am very happy with my VX-5R.. I think it is one of the best HT radios.

another thing.. 6 meters is not used around me at all.. But, if you look at the radio as only having 2 bands. it still kicks that crap out of the 50.. I love it.. It's worth the money..

my dad, KE8KF bought one before me.. So, I got to mess with one first. also I have messed with a club members FT-50R, nice but like the VX-5R better..

DAN
KC8MGS

3686. HELP!!! Police Motorcycle Radio Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-11 00:00:00 UTC
From: Mark Masa <mark@kelltech.com>
Message-ID: <37389F51.7509BAF3@kelltech.com>
Source record: 108498

I'm restoring a 1952 Harley Davidson police motorcycle and the only thing that I'm missing is the radio setup. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading material with the few other people in the country who are into this sort of thing. Specifically, I think what is correct for my bike is a Motorola FM TRU41. It is two boxes about 18" long x 10" wide x 10" high. (these dimensions are approximate) The receiver was in one box and the transmitter was in the other. The power supply was in one of the boxes also, but I'm not sure which one. There are interconnecting cables between the two boxes as well as a cable that went up to the control head mounted on the handlebars. The mic came from one of the boxes and was mounted on the tank. It is a tube radio. This is the one I need for my bike but am interested in ANY ANY ANY ANY pre 1970 motorcycle radio, especially if it has tubes. I hope somebody can help me.
Regards
Mark

73,

Here's a small doc I wrote and sent to the packet radio network a few
months ago. RX and TX mods are included, also the cross-band repeater.

If you're interested, I also have the list of DTMF commands to
control the x-band repeater remotely (but I may have to re-type
it, because I didn't manage to find the text file HI)

Also, I made some tricks to operate packet radio at 9600 bps,
if some people ate interested in, please let me know.

Enjoy ... vy 73,

**
** ICOM IC-2710H MODS
**

INCLUDED :
- Expanded RX capabilities 118-174, 320-479 and 830-950
- Cross-band transponder

WARNING :
These mods are done AT YOUR OWN RISK ! Of course, I should
not be responsible for any damage to you or your transceiver.
However, it works very well on mine !

1/SOFTWARE OPERATION
Depending on which version of IC-2710 you have, you may not need
to perform the hardware modifications. Try this first, and if it does
not work, then have a look to the following paragraph.

* RX extension : Depress the V/MHZ button during power-on.
(do this for the left and right display). This should enable
RX extensions : 118-174, 320-479 and 830-950.

Press V/MHZ several times to see the result.
NOTE: The aircraft band is only available on the left display,
and the 900 MHz is only available on the right one.

* Cross-band transponder :
Set the left and right displays to the desired frequencies. Then,
depress SIMULTANEOUSLY the TWO channel-buttons and the SET/L button
for more than 1 second. Then, the 'L' letter should blink on the two
displays. To de-activate the transponder, simply depress the SET/L
button for more than 1 second.

2/HARDWARE OPERATION
This operation may not be useful, depending on your IC-2710 version.
If the software mods dont' have any effects, then have a look here.

* To avoid damage to the LCD display, remove the front panel and
the microphone plug. Carefully remove the cover of the transceiver.

* Put the rig on a table, components side up, and front side facing you.
Look at the lower right corner, and locate the front panel connector.
Just on the left, you should see two diodes (D138 and D139), mounted
VERTICALLY on the pcb. This should be easy, these diodes are the only
two non-smd components on the PCB !

* Just take a hammer and destroy these silly diodes !
(or simply cut them.)

* Reassemble the transceiver. Power it on, and smell carefully. If you
see some fume or sparks, then you may have forgotten your hammer
INSIDE the transveiver! So, kill yourself NOW !

* If all seems to be good, then try the software mods again.

COMMENTS
These mods are freely based on miscellaneous texts about IC-2350. If
someone has some further information, for example the DTMF codes to
remotely activate the transponder, then please tell it to me. If you
encountered any problem, or discovered any other hidden function,
then please send me a little message.

Good luck ! 73 de TK1BI, Toussaint. QTH is Ajaccio, JN41IW.

3694. Re: Grounding all equipment in shack to single ground bus

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-11 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3738AFE4.9BE2AB3E@erols.com>
Source record: 108506

I don't believe that the average ham can even begin to afford to provide lightning "protection", in the generic sense; e.g. the installation of a suitable grounding grid and adequate equi-potential wiring. A lightning discharge is a discharge is a discharge. The ones that his your house or nearby is the same one (+/- 20dB...hi) that hits a commercial site. From design experience, I know that a reasonably adequate grid system (> 10ohms) with sufficient dissipation ability requires about an acre of ground and a system of up to 40-50 rods and, possible enhancement materials (Coke-Breeze, GAF, etc.). Our agency pays about $20-$80k per site for such an installation, depending on local conditions. All the radio-shack ground rods and 1" flat braid in the world won't do squat if you're the target of an incoming. Other than using, as others have correctly advised, affordable devices such as service entrance suppression and MOV-protection strips which provide only minor to insignificant protection (in the case of a real hit), the best and perhaps only true mitigation technique is to unplug power, antennas, rotors, and land-line commo circuits (and maybe wind some chokes on your outside coax and rotor cables). That's about the only way one can begin to ensure equi-potential in your equipment.

3697. HELP! Ignition noise in AM radio on Ford F350

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-11 00:00:00 UTC
From: CDT <xctx@onr.com>
Message-ID: <01be9c08$94f1d260$700cc8cf@ct>
Source record: 108509

Our Ford F350 AM radio has ignition noise on the high
part of the AM band. I checked the plug wires and they
appear to be "stock". The noise makes it hard to hear
moderate to weak AM stations.

Any ideas / suggestions / hints appreciated.

From: jnooney@albany.net
Message-ID: <3738D34D.E10B4726@albany.net>
Source record: 108512

The DR130, when in memory scan mode, resumes scanning four seconds after hitting on an active frequency, whether the transmission is finished or not. Is there any way to modify it so that it waits until the transmission is done before it resumes scanning?

Joe

You will find there are those on the ham bands that display the cb
mentality. A lot of them are x-cbers who brought that mentality with
them. They never learned how to be a ham, just a cber with a license.

Greetings, all...

I have a three month old ICOM 8500 that decided to die on me. The symptom is pretty simple -- the frequency display flashes when it is turned on. There's no sound whatsoever, but you can "tune" in the sense that you can change the displayed frequency at the appropriate steps, you can change modes, filters, various settings, even reset the CPU, but it just sits there, flashing away, a very expensive paperweight.

I'm hoping someone has run across this and it is something simple like reseating a connector... I'd rather not be without it for 6 weeks while it goes off to ICOM.

Can anyone shed light on this?

Thanks,

Eric, KB0YDN

Does anyone know just how far the MARS/CAP mod will open the IC-2800H?

I'm looking to replace my TM-V7A, and the only shortcoming of that radio is that It won't receive T-band. I was leaning toward a Yeasu FT-8100R, but this radio will definitely edge it out if it opens up.

Well .. the literal answer is the same!

I have a 50 and the VX-5R and they both have good quality and plentiful audio.

And the VX-5R *really* gives good WBFM reception of FM BC; FT-50 claimed to, but was always distorted (mine, at least).

For sale: RARE Kenwood DSP-100. Works with Kenwood TS450, 850, etc.
Excellent, like-new condition. This unit can tailor your SSB signal to make
it sound like anything from a broadcast station to a sharp, narrow signal
for DX, pileups, contests, etc. by adjusting high and low cutoff
frequencies. Adds unwanted-sideband and carrier suppression!

Also can shape CW waveform.

Also sets high and low cutoff frequencies on receive, but does its best work
on transmit!

Sell for $400, and I'll split shipping cost to continental USA.

73,
Steve W3SY

If you did ANY amount of contesting you would have realized that the
Heil's are worth the money. I have done some contesting with other
brands and will stick with my Heil's. Buy the foot switch at Radio
Shack, but spend the extra money on the headphones. Probably nothing
will drain your energy faster than headphones that are too tight, have
lousy adjustments etc. What part of the radio are you connected to?
Think of it that way.

Similar experience with the rat shack antenna. I've had mine on for two
western New York winters with no problems.

On another note, you local auto parts store has some stuff that will
make the antenna stay there damn near forever. I believe Loc-Tite (?)
makes it.

The VX-5 is the same size as a pack of standard filtered cigarettes. It's beefy, because the case is metal, not polymer, and does get a little warm during transmit. I didn't get the barometer accessory, but it does not read in inches. It displays a "hpa" code that must be translated to the actual barometric pressure (the translations are in the 72 page manual...a cheat sheet would be a must!). The built in temperature gizmo reads in celcius and displays the internal temperature of the radio. Using the charger stand (another overpriced accessory), my battery charges in a little over 2 hours. It's quite an impressive little radio. I've only had mine for a couple of days, but it does a lot of neat stuff, and the transmit audio is very good. The receive audio is very crisp, but the speaker will distort if you really crank it up. Under normal conditions, I'd say the audio is very sufficient. At Dayton, I'm definitely using the VOX headset.

We have had a flood of inquiries about not having a booth at the Dayton Hamvention, because we are not listed on "The final list of 1999 Hamvention Exhibitors" on the Hamvention website. Timewave will definitely be at Dayton at Booth 111. We registered late and it appears the "final list" is the last one they posted, but does not have all the exhibitors who may have registered late. (I notice Kantronics is not on the list either, but I don't know if they will have a booth or not.)

Check our website (www.timewave.com) for any late info on new products (PK-232/DSP Multimode Controller, PK-900/DSP upgrade, DSP-232 Pactor upgrade, PC Pakratt 2.1 software upgrade) that we will introduce at Dayton.

Stop at Booth 111 to see the new goodies and a software demonstration. Peter, KC0CLY and Randy, K0CBH will man the Timewave booth.

Thank you all for your support.

73,
Randy Gawtry, K0CBH

Hello all,

I decided to sell my frequency counter. I like it but need cash. :P
bummer. Ah well, that happens. Anyways:

It's a DSI instruments Model 5600A. I believe it came from a high-school
electronics lab downstate. It's in pretty good shape. It's 50Hz to 512MHz
in range, has a 9-digit LED display, Two inputs, and three resolution
settings. It can run off of an internal battery (don't have it, but you
can either get one or make one) or a 9-15Vdc source. I use 12v. It's a
desktop meter, about the size of a Telcom cable modem box if you're
familiar with the size of those. Hey, who isn't. :) Anyway, it's smaller
than the average VCR if you're lost on the cable modem comparisson. 3.5"
high, 8.5" wide, 9.5" deep.

Taking best offer, I'd like to start the bidding at $80.00

Thanks,
Joe.

3758. FS: Broken HT: KenWood TR-2400

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-12 00:00:00 UTC
From: jrerlewe@techsrv1.tech.mtu.edu
Message-ID: <slrn7ji1h9.2rc.jrerlewe@techsrv1.tech.mtu.edu>
Source record: 108436
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,mtu.forsale

Hello all.
I have a broken Kenwood HT for sale.
It's a TR-2400.
It works in a way.. has some interesting problems...
1) needs EXACTLY 9.6Vdc to operate. Any higher/lower will make it do weird things.
2) it does a few weird things anyway... some freqs it just simplyh won't tune. others it tunes fine, and appears to work normally. Might work on packet just fine, whereas a repeater tx freq might make it wig out.

Comes with:
Manual
ext. mic
drop-in charger/operating base
car adaptor/charger
stylish hard-leather case

Yours for the fixer-uppers' special price of $20, you ship.
Great for parts if yhou have one.
Unit is in fairly good shape due to stylish leather case.

One thing, an LM316 Var. Voltage regulator was installed and external wires brought out of the HT in order to allow base operation from a 10-15Vdc source. Output is VERY close to 9.6V ensuring best operation possible under the unit's weird condition.

Thanks,

Joe N8OUZ

the barometric pressure, and the temp. (which comes built in) displays in metric(i.e. 24 C). So, that might bug some people. and there is no way to change it right now. The charger that is supplied with it . Charges it in 3 hours if the battery is dead. Normaly takes less then 3 hours. It's really nice.. you plug in the charger or any ext. power .. and if the radio is off, it starts charging. with the display saying "Now charging" and when it is done, it says "completed". It is a really nice set up. if you run the radio on ext. power, it slowy charges the battery also. Just take much longer when the radio is on.

Well, in general I like ICOM's equipment because of its build quality;
this is the first one I've had problems with.

To answer your questions, yes, it is under warranty but I was hoping to
not have to go that route and be without it for a while.

> I'm not going to ask the obvious question about the squelch knob... <g>

:-)

The diagnosis is a PLL that is failing to lock. I'm dealing with the
problem via normal channels.

Thanks to all who sent me email on the subject!

My 850 also does this especially when the rig has been powered off for a period
of time.
I wouldn't worry about it. Mine is going on 6 years old and still functions
100%.

There is a lot of variety in this 18 tube auction which I'm offering for a $9.99 start price, no reserve. I'm fairly sure that all these have tested out GOOD on my Sencore tube tester. Click below for the eBay auction which lists all the tubes and contains the links for all their pictures:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=101444512

These are the tubes: 6V6GT, 5W4GT Mil. Spec. Tubes, Pair RCA 6Q7 Tubes, RCA 1G4GT Medium-Mu Triode Tube, Motorola 6BH6 Sharp-Cutoff Pentode Tube, Tung-Sol 5751WA Twin Triode Tube, Sylvania 6J6 JAN Tube, RCA 5651 Mil. Spec. Tube, Sylvania 6V6GT Beam Power Pentode Tube, Tung-Sol 6V6 Beam Power Pentode Tube, 6K7G, 6L7, 12SA7, 2-1LH4 Tube Assortment, and 2 Sylvania JHS 6J4WA Mil. Spec. Tubes.

I also have for auction a 6J5G/VT-94A Mil. Spec. Triode Tube for which I am asking $5.99.

***TEN TEC SP-325 MF/HF Receiver built for the Government used by the
C.I.A. Excellant
***COMMAND TECHNOLOGIES-Commander HF-1250 Amplifier w/Hypersil
Tansformer.
***MFJ-784 Tuneable DSP Filter

Plus Many Other Goodies..... Thanks Rich

3786. Info needed for Yaesu FT-2500M

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-12 00:00:00 UTC
From: bavce@my-dejanews.com
Message-ID: <7hcofe$o8l$1@nnrp1.deja.com>
Source record: 108464

I have Yaesu FT-2500M VHF mobile radio, but the rx frequency is different from TX frequency on VFO.

Ex. you transmit on 146.000 and for reception on this freq. you must set the VFO to 146.200 to work properly. This allow you to have the same RX/TX frequency for simplex operation.

Any info how to solve this problem??

3787. Headphones of choice? Heil or other brand(s)?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-12 00:00:00 UTC
From: KD5CAS@iamerica.net
Message-ID: <3739dad9.24082432@news.iamerica.net>
Source record: 108465
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment

I've recently been bitten by the contesting and DX bug. I know that a headset/boom mike combo can help by leaving my hands free for other functions.

Last year at Field Day, I had a chance to use a Heil Proset-4 with a footswitch for PTT. I really liked it.

The problem is the price of new Heil products. And to add to the complexity, I have not seen any similar products offered by other manufacturers.

I know that hams out there must also be using other brands of headphones.

QUESTIONS
==========
1. So , what headphone/boom mike combo are you using?

2. Where can I buy these other brands?

--Thanks!
Scott, KD5CAS

3796. avoid PRO-AM on-glass antennas

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-12 00:00:00 UTC
From: jim <n9wjk@NOSPAM.stupiddog.net>
Message-ID: <01be9cca$363ac2a0$d2fe1f0a@ntsrv01>
Source record: 108474

I guess most would say to avoid on-glass antennas altogether. Well, I didn't want to drill holes or use mag-mounts on my new car. So I went with on-glass. 1 pro-am dual band, and a antenna specialists UHF. Both antennas have only been on the car about 2 months. And were mounted according to their instructions. And today the pro-am blew off the car.....not what I had expected.

So if anyone has any suggestions as to which brands hold on the best, please let me know.

Thanks!
N9WJK

3797. For Sale: Kenwood TS-450S/AT in *Excellent* Condition!

FS TS850S/AT $1000.00 you pay Shipping 75LBS.
The '850 has a built-in automatic antenna tuner, and my radio is equipped with two optional 500-Hz CW-narrow fiters--one in the 8.33 MHz IF and another in the 455 kHz IF. I've modified this radio to provide out of band operations for MARS OPS.
Heavy duty power supply, boom microphone, original hand held microphone.
Voice recorder card installed, used for CW and Voice recording your outgoing voice or CW message. Very nice for Field Day ops. And contesting.
Military storage and shipping container, completely sealed from the outside world. $75.00 for container.
1 ea. Service manual for TS850 and power supply.

Okie from Waikiki Hawaii

3805. NEW ADI 2-Meter Mobile!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-12 00:00:00 UTC
From: Clint Bradford <clintbrad4d@earthlink.net>
Message-ID: <7hao6p$2hs$1@nnrp1.deja.com>
Source record: 108526

Just noticed this on ADI's site: their new AR-147 2-meter mobile just received FCC approval.

- AM air receive
- 81 memory channels
- CTCSS -AND- DCS decode/encode!
- TX 144-148 MHz
- RX 118-171 MHz including AM airband
- MARS and CAP capable (permits required)
- 50, 10, and 5 watts settings
- Auto Repeater Offset
- 9 DTMF autodialer memories
- a built-in redialer for autopatch use
- programmable band and memory scan modes

...and a lot moe. Should be in dealers this week or next week. From the rumors I heard, VERY attractively-priced!!!

ADI's line of radios appear on their Web site at:

http://www.adi-radio.com

You appear to be so engrossed in your efforts to convince the rest
of the world that you are incapable of attaining anything in life that
requires effort that you seem to have totally missed the point.

The reason we have thousands of newsgroups is because the world is
filled with millions of people with different interests.

Although your inability to learn Morse code seems to be the current
focus in YOUR life, the rest of us don't necessarily view your lack
of motivation as an earthshaking event.

REC.RADIO.AMATUER.POLICY was created with the sole intent
of giving you a forum in which to air your views. Please feel free to
use it to your hearts content.

Posting your Morse code dribble in multiple newsgroups is not going
to gain you any support. Many unmotivated whiners before you have
proven this point.

Some people have things they want in life because they are willing to
expend the effort required to obtain those things, whatever that effort
may be. It is obvious to us that you are not one of those people.

What apparently is not obvious to you is that the rest of us don't care.

73, Jim KH2D

Yeah so?
I probably have made some real serious mistakes in my life,
but at least they didn't lose me a JOB!

My mistakes are mine to make, and in so long as they don't affect
others,
I could handle them effectively.

However, it seems that you are doing a little digging. Go ahead and dig.

However, if you want to start a flame war on this point, you'd better
be prepared to defend your position (and believe me, I know how to find
things out).

Otherwise, if someone at a federal agency break regulations and does
personal stuff via the "in house" network (clearly in violation of those

"in house regulations"), then they definitely deserve whatever they get.

Rules and regulations are there for a reason. If you don't like it,
tough shit!
Life is never fair dude.

Hawke

Alex,

Interesting idea, however I doubt a desktop PC has the computing horsepower to keep up with anything above audio frequency. Most of the DAC/ADC cards I have seen only support conversion rates up to the low 10's of Khz, which again limits you to audio frequency work. The fastest cards (conversion rates around 100 to 500 Khz) I have seen use a buffered type of design and are very expensive.

If your needs are only in the audio range then check out Texas Instruments, Motorola, Bur Brown etc. for info on their DSP evaluation boards. These boards are normally complete systems with analog I/O, memory and a fast DSP chip. Some of these boards can be had with a floating point DSP chip for under $200 USD. You would most likely spend just as much for a PC DAC/ADC card alone. In addition these evaluation boards come with manuals, programming software (assembler and linker), and a RS232 port so you can use your PC to develop/write the software on for down load to the board.

My gawd, after reading all these replies, I didn't realize how HORRIBLE
my Yaesu FT-50 HTs actually were!!! <g>

I guess I'd better trash 'em...and forget the fact that they are the
most "comfortable" and ergonomic HTs available for
medium-to-large-handed operators (what other HT can comfortably lay in
your left hand, and the operator be able to adjust the volume, key the
mike, open the squelch, turn on the display backlight, and more...ALL
with ONLY using your THUMB?)

Solid performance ... ADMS computer programmability ...
universally-available batteries and speaker-mikes...as rugged an HT as
they come...

Haven't ever given this a thought...it's a "non-issue" for me...

>>...with my old ic 2sat...

Rotten apples versus oranges argument. I regularly use Maha NiMH FNB-47 batteries on my FT50 (and Vertex VX-10 HTs). 1,800mAH, excellent performers.

The "break point" for high power output on the Yaesu FT-50 is either 8.0 or 8.1 VDC (according to W&W and Yaesu Tech Support). The FNB-47 is rated at 7.2VDC - so you are very close to max power out (which,of course, you might not need if you're working nearby repeaters, or simplex with a couple miles).

> ...the large 1100 mahr battery is too large to allow the
> radio to fit in yaesu's own carrying case for the radio so you're
> forced to carry the damn thing in your hand.

The only "Yaesu" case I have purchased is the one with the elastic sides, which accomodates either size battery...

I also use The Pouch that is specifically made for the FT-50/VX-10, sand the battery's belt clip.

>...if i hadn't received the damn thing as a gift, i wouldnt buy it!

Wow...really I am really sorry that you feel that way...I believe, though, that if you were to purchase a Maha MH-C777a Universal Conditioner/Charger (properly works on both NiMH and NiCad packs from 4.8-to-12VDC) and a Maha FNB-47 NiMH pack or two that you would be very pleased with the FT-50.

Hi Tim,

Mine does the same thing - has since I got it. The delay seems to be
longer if you have the "dim" button pushed. I have not worried about it
since my delay doesn't seem too long, about the 5 seconds you mentioned.

73,

Wayne, W1KI

ARRL/VEC

Source record: 108339

This is on auction at ebay 103725639. These are Hustler antennas, the RM 20 RM 40 RM 75 and RM 80 meter resonators. The power rating is 400 watts. Also included is Hustler Mast MO-2. It is a mobile mast, 54 inchs high for bumper mounting and folds over 27 inchs above the base. Winning bid pays shipping. E-mail me with any questions.

Thanks for reading and hope to see your bid..

Gary

I was wondering if Uniden still has a hands off policy of repairing a rig
which has been modified.

I have a Uniden 2600 which I use for a 10 meter IF with extended freq range
thanks to the Chip Switch.

Will Uniden fix it or will they send the unit back?

I've had a Larsen dual-band glass-mount antenna on my Jeep Wrangler hardtop for over 2 years....no problems. Make sure your mounting surface is extremely clean and flat (i.e. not on a curved portion of the glass). I also put a bead of silicone caulk around the outside base of the antenna. No problems so far.

>there's a world of ham radio awaiting you outside of 2 meters
==========
AMEN!

I agree! I started as a Tech + in 1997. At that time, I wasn't real confident with the CW, but I could get on 40, 15, and 10 meters.

The upgrade to general was when I realized how much fun I could have! RTTY, CW, AM, SSB, FM, and more --now PSK too!

DXing, contests, ragchewing, traffic nets, and more!

Places close to home, places further from home (stateside), places I've been to (Europe), place I want to go (islands of the sea), places I learned about in history class (St Helena Island, in the S. Atlantic. Place where Napoleon was exiled to) and places never heard of before (St Kitts, Kwajelin?)

People who have done significant things in their lifetime, such as:
--1954 Helsinki Olympic Gold Medalist, Team USA, team rowing
--Chief engineer for Boeing 747 dashboard/instrument panel

People who can tell you about interesting things, such as:
--95 year old ham in Grenada (the country) who remembers both WW2 and WW1.
--Ham in England at Blechey Park (the British version of Norad from the WW2 era) to tell about the history of the site.
--US Air Force software engineer for early warning missle detection systems in the North Pacific
--Ham in Yugoslavia the night the recent NATO attacks began
--Ham in Greece the night the recent NATO attacks began
--Hams in the former USSR (the ones we were taught were arch-enemy number one back in school) who are real people too.

And my favorite to tell about:
--5J9A, Amazon River mobile, October 1998. That's right. A ham, on a boat, going down the Amazon River.

People ask, "What does ham radio have to offer?"

The answer is simply, "The world, and more!"

--Scott Dickson, KD5CAS

Here at work we are currently using a 450 MHz pentium running NT for
developement work. This is in a VXI chassis which is designed for such
things, unlike a PC. We also have a 20 bit 20 MHz A/D with internal DSP
(for filtering and I/Q conversion) for collecting the data.

Even with all of this we can't do real time processing, of course we are
doing some pretty hairy stuff!!! (I programmed the DSP routines, by the
way.)

>If your needs are only in the audio range then check out Texas Instruments,

>

We are looking at using a DSP VXI board, but some of us doubt that it would
be any faster than doing it in the main processor with software, and
probably would be slower (clock rates are slower and you still have to
shovel the data back and forth). Of course we are digitizing a 5 MHz
signal, so audio on a DSP may be ok.

Have you looked into using the good ol' soundblaster card?

Jim

For sale:

Apparently some people have changed their mind about
buying some of the items I listed a month or so ago.
In any case, the following are available:

Kenwood ST-2 desk charger for use with TR-2500/TR-2600.
Quick charge (about 1.5 hours), plus can be used to power
the HT at the same time. Great shape. $ 75

Kenwood MS-1 mobile charger and stand. Runs off of 13 V DC.
Standard charge rate, but also powers the TR-2500/2600 HT.
$ 35

Kenwood VB-2530 two meter amplifier. Up your HT power to
about 30 watts. Useful on most any HT. With original box
and manual. $ 75

Prices do not include shipping from Florida.

Thanks.

Here what I would do ... clean all the old gunk off both sides of the antenna clean with rubbing alcohol the place on the glass you are putting it on inside and out. And put a little on the place where the glue was on the mount too. then get yourself some silicon a small tube will do. smear it on the mount EVEN!!.. and mount her up..make sure you push that baby down good. and let it sit for a bit atleast 24 hours to cure good. then you should be set... if you have to drive it make sure you unscrew the antenna till its cured. Now dont ever put it on in cold weather that might of been your problem.. it should be atleast 60degress. or you have to use a heat gun or hair dryer to heat that window up.. hope this helps.. we used to do cell antennas like this alot when a customer didnt want to buy a new one.....

good luck

Message-ID: <373B24DD.C5B8D309@home.com>
Source record: 108357

Hi:

I modified my 25 year old D-104 so it could accommodate 2 Heil elements. I used a mercury switch and mounted the switch and the 2 elements (DX and normal) in foam rubber. When I want to use the DX element I turn the mike upside down. Gravity takes over. Works great. The mike shows no evidence of modification.

You could, at least theoretically, do sub-Nyquist sampling.

The catch would be like using a strobe light: while you can
flash (sample) at any convenient sub-multiple of the item
you're looking at, nothing significant must happen during
the flash. This translates into a moderate sampling rate
(definitely in the soundcard/DSP eval kit range) but a
very fast sample and hold ADC (which is not).

I don't see how. A radio station is a radio station. I practice pretty much the same methods here in using a ground bulkhead etc. And I have also taken a direct hit with NO damage. Unless the "average" ham likes his rig to become toast. lightning protection is very much needed. Even if you only unplug, and I do this myself, you must unplug properly to avoid any damage. My antennas plug into a ground bulkhead same as Gary describes, the only difference being I haven't bought suppressors yet. When I buy the suppressors I won't have to even do that unless I just want to feel better. MK

You really are a FOOL waiting to be smitten !!!

You should listen to Gary Coffman, that is EXACTLY the way a good dependable ground system should be put together.

I know, I did the same thing at my QTH and also talked a friend in Vegas into doing it this way.

The systems both WORK GREAT. They were inexpensive to do it right, and if your going to stick a bunch of metal up in the air and their is lightning around, you need way more than " Unplug and hope for the best " Why not add prayer, thats a great lightning deterrent, almost good as hoping for the best

Having a great ground system also helps getting a good signal out, ya gotta have it!!

Good Luck, (yea, theres another great lightning preventer)

*****

For Sale: Uniden HR-2600 in Excellent ++ Condition in original box and packing.

Included are the up-down microphone, power cable assembly, operating manual, mobile mounting bracket, mic bracket and all associated hardware. This HR-2600 is serial number 95004768 (1995 mfg date) has been stored for the past several years and occasionally used when the band opens. Unit covers 28.0000 to 29.6999MHz in USB/LSB/AM/FM/CW modes with an output power of 25 watts and 10 watts on AM/FM. FM mode has repeater-split capability. This radio HAS NOT been modified in any manner, it is completely stock and works as new. Performance is outstanding with the band opening conditions we've had lately. $195 plus shipping.

The technician license does NOT allow you to use ANY of the Ham bands
below 6 meters. Thus you DO have to pass a Morse Code test if you want
to be a HAM without restrictions. A technician license is like a
fishing license that only allows you to fish in a small fraction of
small lakes. Only you don't have to know Morse Code for the fishing
license with no restricions on lakes.

> any good reasons not to....

Well if they would replace the Morse Code with Russian and make you learn Russian with a test to keep your HF priviledges, I'm sure you would be posting some comments on how you don't understand why you need to learn Russian if you only plan to use English. And then the Hams that allready KNOW Russian would tell YOU to shut up and stop complaining and posting as they aren't looking for any good reasons not to have to learn Russian.

There are going to be a lot of posts to newsgroups that don't happen to have subject matter that is of personal interest to you. Lots of YOUR posts will not have any interest to lots of other people too.

Read the threads of the subjects you find interesting and skip over the ones you do not. Seems like a lot of wasted time to reply to threads that don't interest you.

Ham radio has changed. Packet, Satellite, R/C, television, and so much
more had nothing to do with what you said above. Perhaps all wood
workers should be required to be able to use old hand made tools of the
1800s before they are allowed to use modern power tools for the same
reason you gave.

Knowing that one has gone through, and survived, the identical
> trials and tribulations of his or her counterparts, builds a unique bond of
> dedication and purpose.

If I want to wash my clothes, I would find no bond of dedication or
purpose by using a washboard. I would prefer to use a washing machine
and dryer, and would not appreciate being forced to perform a test using
the washboard before I am given the PRIVILEDGE of being allowed to use a
washing machine. Would you? Or are you one of those lazy people that
think they should be allowed to use Washing Machines without ANY sort of
a test? How would we be able to keep CB'rs from using washing machines?

The instant gratification crowd of today has no
> appreciation for that bond.

Better sell your car and walk to work, don't use that Microwave oven either as that is for instant gratification and convienience too. Get out those two sticks, rub them together, and cook your food the hard way.

Using Morse Code was at one time an instant gratification and convienient thing too over writing and sending a letter pony express. Did people despise Morse Code back then because IT was more convienient and gave instant gratification?

All inventions give us convienience and instant gratification. That is a GOOD thing. Civilization finds better more efficient ways of doing things. Wanting to find an easier and better way of doing things is intelligent. Finding ways to make things more difficult is idiotic and stupid.

AMEN!! And you only scratched the surface. Wait until you get into things like the ARES (Amateur Radio Emergency Service) where you provide essential emergency communications in time of disaster. (I got my baptism of fire as a new ham back in 1969 operating the ARES net control station in Pensacola, Florida during hurricane Camille) Hams around here do all sorts of public service work to keep our skills up. We provide communications for marathons, fundraising walkathons, the Cornhusker State Games and other such events. We have had an active storm spotting network (one of the best in the country I might add) for the past 30+ years.

There are all sorts of other aspects too. Try satellite operation, or moonbounce (EME). Contesting is a blast. Hook up with your local radio club to participate in Field Day at the end of June. There you can operate with the privileges of the control operator (often Extra Class) to get a real feel of hf ops.
Even this does not give you a complete list of what you can do if you upgrade. Keep studying while you are still in the mode, it is well worth the effort!

VX-5R has same attributes, and is smaller and has much faster battery charge.

Thing that has always bugged me abt my FT-50 is the "instant on" power switch. Maybe they fixed that in later versions, but the VX-5R definitely has; need abt a 1-2 sec press to turn on.

BTW -- FT-50 is definitely a "keeper"; not getting rid of mine. But I do love the VS-5R.

Scott - KOSS makes some good headsets, many times under different distributors' labels. For example, I just wrapped up working alongside the firm, RACING ELECTRONICS, for the California 500 NASCAR auto race. KOSS makes a very comfortable noise-reducing headset (25dB) for about fifty bucks. And professional models with boom mike are about $239.00.

Anybody notice how poorly designed the batteries are for the FT 50, especially for those of us who use the radio for public service/emergency service

with my old ic 2sat, i could put 6 AA NiCd batteries in a battery pack (sold by icom). these could be recharged off the ht. and 6 batteries gave about 8 v.

the ft 50 has a battery pack that allows ONLY alkaline batteries (it voids your warranty if u use NiCds) and it holds only 4 batteries. this develops about 5v. at 4v the radio shuts off, so the pack isnt much use.

in addition the large 1100 mahr battery is too large to allow the radio to fit in yaesu's own carrying case for the radio so you're forced to carry the damn thing in your hand.

if i hadn't received the damn thing as a gift, i wouldnt buy it!

Nope, didn't fix it.
I didn't have to.
I put it on my kitchen table, connected a rubber duck, and talked on the
repeater. The display read "146.2797" and the repeater input is 146.28.

That constitutes working in my opinion, so I'm not sure what happened when
you tested it...

Cripes.
Either make an offer or not.
I'm pooor, make an offer. The higher the offer I get, that's who I'm
selling it to.

Easy logic:
whoever gives me more money, they get the counter.

If I get lower offers, you win. If this is a great deal and I get big
offers, hey, I win.

fair game.
play or not.
i hate whiners.
Besides, the topic is stating what I want it to state: for sale.
... basically because it IS FOR SALE.

If the average ham can spend thousands on radios, he can afford to put
in a first class lightning mitigation system to protect his investment.

>A lightning discharge is a discharge is a discharge. The ones that his your
>house or nearby is the same one (+/- 20dB...hi) that hits a commercial site.

Well, duh. Tell us something we don't know. The discharge is adequately
modeled knowing that the lightning discharge behaves as an approximately
18 kA constant current source with a waveshape described by IEEE 8/20.
Well over 99% of all strikes will conform closely to that model. Mr Kirchhoff
and Mr Ohm can take it from there.

>From design
>experience, I know that a reasonably adequate grid system (> 10ohms) with
>sufficient dissipation ability requires about an acre of ground and a system of
>up to 40-50 rods and, possible enhancement materials (Coke-Breeze, GAF, etc.).
>Our agency pays about $20-$80k per site for such an installation, depending on
>local conditions.

Ah, government contract. Of course. I suppose you pay $200 for hammers too. :-)

I'm sorry, but I just can't take you very seriously. It doesn't take a government
budget to protect your equipment from the effects of a strike. Only three things
have to be kept in mind. Give the discharge a preferred low impedance path to
Earth. Handle the remaining potential differences by equalizing potentials
seen by the equipment. Prevent sideflashing. None of these are very difficult
tasks, though the details of how you do it must be correct. You can't make
any mistakes.

>All the radio-shack ground rods and 1" flat braid in the
>world won't do squat if you're the target of an incoming.

While I wouldn't recommend Radio Shack ground rods (rods available at
your local electrical supply house are cheaper, and there are much more
effective grounding methods than rods), and while I don't recommend using
braid at all (higher skin resistance than smooth solid wire or strap), it *is*
possible to construct an adequate shunt ground using just those items. It
is just harder and more expensive than necessary.

Of course even a very elaborate shunt ground system will not protect
your equipment by itself. Your ground system will still elevate several kV
above average local Earth potential during the strike event. You have to

take steps to ensure that too large a part of that potential doesn't appear across your equipment. That's the role of the ground window and the suppressors.

>Other than using, as
>others have correctly advised, affordable devices such as service entrance
>suppression and MOV-protection strips which provide only minor to insignificant
>protection (in the case of a real hit), the best and perhaps only true
>mitigation technique is to unplug power, antennas, rotors, and land-line commo
>circuits (and maybe wind some chokes on your outside coax and rotor cables).
>That's about the only way one can begin to ensure equi-potential in your
>equipment.

That's totally inadequate, and likely dangerous as well. You've provided no sideflash protection, and unless you've thrown all cabling entering from the outside out into the yard, you've provided an attractive path for lightning to enter your home. While some few *might* religiously disconnect antenna and rotator cables and throw them into the yard every time a storm approaches, or every time that they leave home, few indeed would do the same for their power entrance or telco entrance wiring. Yet that's what you'd have to do to get full protection by isolation.

Sideflashes of 12 feet or greater are fairly common during a strike unless steps have been taken to prevent them. I've examined a home which had sideflashes cross a room from a disconnected coax to a baseboard heater (caused a house fire). In an industrial plant, I saw a case where a sideflash traveled over 25 feet from an exhaust stack to a piece of machinery, and then secondary flashed to a cold water pipe another 10 feet beyond that (totaled the very expensive machine controller). These are examples of the sort of thing which can happen when proper snubbing of conductors entering from the outside is not done, and when proper potential equalization isn't done inside.

But it is pretty simple to do it right. There's really no excuse for not doing it right. Broadcast stations don't go off the air and disconnect everything when a storm approaches. They have to ride out the strikes. Hams can do it too. Or if the ham doesn't want to leave everything connected and operating, he can at least snub the potentials to prevent a wild light show in the shack.

This doesn't need to cost $80,000, it needn't even cost $500 to protect a modest amateur station. My home station is a good example. It has taken at least 3 strikes that I have personally witnessed since I installed lightning protective measures. In none of those cases was there any (connected and operating) equipment damage, though in one case a length of 9913 outdoors feeding a 2m vertical did melt during the strike.

My station has a 70 foot Rohn tower with a Ufer base, 3 ground rods, spaced out 16 feet from each tower leg, interconnected by a buried #6 bare copper ground ring, and tied into the 16 radials running out from the tower base. This is my external single point. It is also tied, by buried #6, to my power entrance, telco entrance, the underground water piping, and a 30x34 Ufer which is the floor of my separate shop building. The wire and

rods cost me less than $60 (not counting the radials, which are charged off to the antenna system).

All cabling on the tower is routed directly to ground level and is suppressed to the single point. It is then led underground over to the house and the station. The entrance bulkhead there serves as my ground window. It is a 1/4 inch thick 12"x12" copper plate which has been drilled to accept suppressors and lugs. I got the plate at the scrapyard for $1.10 a pound.

A total of 8 suppressors are used at the tower base and at the entrance panel. They cost $280 (Polyphaser NEMP, I got a deal). The rotator cabling is handled by naked gas tubes on a barrier strip ($16). Station power is suppressed by a Delta Arrestors silicon carbide unit ($12). Another of those is installed at the main service entrance to the house, and a third at my shop power panel. Telco lines are fitted with naked gas tubes. The ground window is tied back to the external single point by #6 to prevent sideflashes. Of course all internal station cabling, including station power and telco, are tied to the station ground window before leaving the area.

The total cost of the system is under $500, and it has saved over $5,000 worth of radio and computer equipment at least 3 times so far from direct strikes, and numerous times from near misses and spikes. I did lose a 2m Isopole and its coax in one of the strikes, but not the powered up radio that was feeding it.

Now this is a less elaborate system than I install at broadcast stations and commercial sites, but then my station is much less elaborate and less exposed than most of them too. A typical commercial site I've done cost approximately $2,000 in materials to protect a 350 foot tower and the associated radio room and R&D lab (wireless data equipment manufacturer).

In the six months before I installed the system, they had suffered over $50,000 in equipment damage from several strikes (mostly to lab test equipment, though the radio equipment bit it too). After the system was installed, the strike counter on the tower has recorded 21 direct strikes (as of the last time I checked), and they have lost no equipment. Zero damage.

And they aren't out $80,000 for a gold plated government contract spec ground system either. All I used in addition to the plant Ufer was a #2 ground ring that circles the plant to provide quasi-Faraday shielding against Earth currents. The key thing I did was ground window their radio room and lab. This is so important, and so often not understood by electricians, that it is the most common fault I find in places that suffer lightning damage.

3891. Parasitic suppression?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-13 00:00:00 UTC
From: Mark Keith <nm5k@wt.net>
Message-ID: <373AAA02.206@wt.net>
Source record: 108422

Want to pick your brains... I'm sure most have heard the stories about the vhf parasitic oscillations in hf power amps. In the past I have kept a close eye on all this but hadn't made any changes as I think usually if it isn't broke, why fix it. In other words, I had never noticed any unusual problems. One small arc/pop about 4 years ago that I thought might had been a bug that wandered into the hv??? The amp kept working fine so I didn't think much of it. Normally this amp seems very docile and stable. It's a Henry 2K classic running a pair of 3-500z's. Plate about 3200v+ -. The filter caps are getting a bit old and I have been planning on getting a new set, or replace with a big oil filled. Now tonight comes along, and I'm talking to a friend of mine using the amp. All seemed normal as always, and I yakked along for a good while. I had unkeyed for a minute or two and all of a sudden, BANG!!!!! I mean loud and sharp like a gun, no arcing sound involved. Actually the sound was almost the same as a firecracker. It actually rang in my ear for a second. So my first thought was, well there goes one of my filter caps.... But, the plate voltage still read normal on the meter. In fact, I think the amp still worked ok at that point, but I got paranoid that I had blew a cap and turned it off.So I signed off and pull the covers on the amp to check out. No visable filter cap damage. In fact so far no damage at all anywhere I can find yet. I have pulled the RF deck off the pedastal to check underneath also. No damage that I can find anywhere in the input circuit or tuning caps etc. No signs of flaking on the tuning cap either. I have never had any intermitant arcing with this amp that I've ever noticed. I do notice one cap that has the end plastic a little crinkled , but otherwise looks ok. This 2k classic an old model that used 8 computer grade caps. The later 2k classics had a single oil filled. Now, seems to me if I had blown a cap, I would have a mess, considering the sound. But all caps are in one piece, and also remember , the amp was still working when I shut it down. So, seems to me, barring any other problems, I have had one of these"vhf parasitic pulses". Big time...But, I so far, I see no damage in band switches, etc. Of course ,kinda hard to check what it might have done to the tube, but I'm willing to bet the amp still works fine with normal output when I fire it back up. So I'm scratching my head here. I have read all the discussion in the past couple of years between AG6K and all involved. Some say it's a logical explaination for this, and others say the problem doesn't exist. I know one thing, it sure as heck went BANG!!! here, and it wasn't any normal parasitic I have ever seen. I have had amps go into oscillation before from weird tuning etc., but all they ever did was peg the plate current until I moved the tuning off the bad spot. Never have I had an amp in oscillation go BANG!!!. So what do you all think at this time? Would welcome comments from others who have had this problem. I'm giving serious thought to buying a set of retrofit vhf

suppressors unless someone can think of a better idea. At least if I do that, and it does it again, I'll know it wasn't the suppressors fault. These retrofit ones are the "nichrome wire versions" to get a lower Q of the resonant vhf circuit between the tube and tune cap. I checked mine with a grid dip meter, and seemd to have a pretty good dip at about 130 or so mhz. So seemed fairly hi Q I guess. While I have the amp apart, I think I will change out the filter caps and decide what to do on the BANG!! operation. I don't like that at all. Just thinking about what that means for my tubes, meters, etc. gives me the willies. Going bang! is not an option I will except. Might as well try a set of the retro-suppressors I guess...What do you all think?MK

I see, Tony. Techamericas website it pretty nice, but the search
engine for finding anything is poor at best. They do have the DJ-C5.
Here's how to find it: Go to techamerica.com. From their homepage,
click on "online catalog". The screen you get next will be a tab
labeled "Online Catalog". Page down this tab to catagories and click
on "communications". The next screen will also have alist of catagories,
click on "amateur radio". Next screen: click "transceivers-handheld"
The first items listed are Standard radios. Page down to the 12th
item..."2m/440mhz credit card HT"...this is the Alinco DJ-C5T. They
have it for $159.95. Cheers,

Dave,
yes. However, the FCC made in clear that "personal items" were
not to be broadcast via the internal e-mail network
(just in case the unthinkable could happen, which it did).

If whoever started this whole fiasco gets fired, then so be it!
They earned it.

3898. Alinco DX-70 help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-14 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <QAZ_2.1559$nZ4.49251@monger.newsread.com>
Source record: 108229

I have an Alinco DX-70 HF xcvr that I have used in the past, but not too much. In fact, it has spent most of its life in its box. The last I used it, it worked fine.

I went to use it this time, and get a blinking frequency display. I am assuming that the blinking frequency indicates a PLL unlock condition. This is further confirmed by the fact that most all of the functions I try, seem to work, with the exception of transmit and receive. The is no receive noise, and I get no power output.

This happens on all bands, by the way.

Any suggestions? It is possible that it would do this due to a low lithium battery? Since it has been setting for quite a while, the lithium battery could have drained. However, the frequencies that I had last used on each band were still set, indicating to me that it kept some of its info.

I have tried a computer reset, but no change was noted.

What next?

Thanks for your help.

I had the FT-50. It went when I got the VX-5R. Buy it (the VX-5R, that is), you'll like (love) it! When I could walk around the house and listen to BBC and Deutsche Welle on the same radio I could talk (with 5 watts) to the local 2-meter and 450 repeaters, I had arrived! Not to mention the BC and NBFM listening. And the LiIon battery lasts and lasts and lasts. I can't quite understand why other mfgrs haven't taken advantage of the LiIon technology. Buy it, you'll like it! Enough!

Source record: 108232

I own an AL-80 (original) and the Heathkit copy, the SB-1000. I called Ameritron yesterday to acquire some parts to repair the SB-1000 and the guy I talked to was most helpful and knowledgeable about the construction of this equipment.

Personally, I would go with the AL-80B series if I were looking at that power level as 3-500 tubes are readily available on the used market (translate that to cheap and available!).

I have a really nice Icom IC 756 HF and 6 meter for sale.
True Dual Watch, monitor two different freq. on the same band at the same time, 4.9" LCD Dot Matrix Display with Spectrum Scope, Alpha Numeric Memories, Auto Antenna tuner, Quadruple Conversion Superheterodyne Reciever, 101 Memory Channels, Auto DSP Controlled Notch Filter, Twin Pass Band Tuning, Power Mos FET's, Built in Memory Keyer, PC Programmable, and Speach Synthesizer option available, (not installed in this rig yet). Also IF-DSP, and 100 watts out on HF and 50MHz.
I need $ 1,650.00 for this rig and to answer the questions about the serial number, it is 2257 and I called Icom Tech Support and they told me that this rig had all the mods that have been done to the late model Icom 756's, I bought this rig one year ago. The number to Icom Tech Support to verify this information is: 425-454-8155
You will not be dissapointed in this radio, it is a a nice one.!!
Picture on request for interested buyers.
73 and Happy Hammin'

Hello ALL,

The IF-10(x) unit will allow for control of Kenwoods via the RS-232 port of the computer , or direct TTL in case of track-box use.

I have built a clone of it for KENWOOD TS-711 , TS-811 TS-940, 140 & 680. The unit is instaled exactly as the original one, meassures the original size, and is built on a double-sided PCB.

\Depending on the amount of user-demand for the unit, I can have a kit made; The project will be a non profitable one, (Donation to Amsat) and price ($ 55 more or less) will depend on the amount of units.

This is a survey in order to now what to expect.

Please reply to me (4Z4TL) here (ernie@netvision.net.il) or v satellite to 4X1AS, Shlomo.

73 , Isaac Lindenbaum, 4Z4TL, Phone\Fax: 972-9-9588161

Credits: The printed circuit was edited by basil ZL3UF, and the schema modified a bit to suite implementing a crystal by Yakov 4Z5AY.

Posted by George Nelson on May 13, 1999 at 16:42:56:

I sent this e-mail to Yaesu "Chip Margelli" May 5,1999 and have not received any response as yet. I thought you new FT-847 owners and perspective buyers, would be interested.
The following is a series of e-mail exchanges between Yaesu and I, concerning the problems encountered by me, after purchasing one of the first FT-847's over a year ago. As you can see, the problems have NEVER been resolved.
****
TO: YAESU U.S.A.
C. H. "Chip" Margelli, K7JA
Manager, Engineering/R&D Department

What Happened Chip and John??

The last time I heard from you folks at Yaesu, was a phone call on July 28, 1998 at 1604 PDST. John Lynn said that he was shipping back my radio, after two months in the shop without fixing the problems. He also said that I would be contacted when a fix was found.

The following e-mail responses from you, were very positive about fixing the CTCSS DECODE problem with my FT-847. All right, you lost my name, ham call, phone number, home and e-mail address. The excuse is accepted!!

Now that we are connected again, what did the Japanese Engineering team come up with to fix the ctcss decode, volume control and loud rear fan problem???

Please respond by phone or e-mail. Thank You, George Nelson K7GEN
****
THINGS THAT I DON'T LIKE ABOUT THE YEASU FT-847

1. VERY NOISY FANS, ALWAYS ON, (SOUNDS LIKE A PERSONAL COMPUTER)
2. CAN'T MEMORY SCAN BY MODE
3. ONLY 78 GENERAL MEMORIES FOR WHOLE RADIO NOT LIKE ADVERTISED (78 PER BAND)
4. NOT ABLE TO PROGRAM DIFFERENT CTCSS TONE ON XMIT AND RECEIVE
5. THE 12 SATELLITE MEMORIES NOT USABLE FOR SAME BAND REPT.
6. ONLY ONE WAY CROSSWIND REPEAT CAPABLE, IN SAT MODE ONLY

7. CTCSS DECODE CKT. OPENS ON SIGNALS WITHOUT PROPER TONE
8. REPEATER OFFSETS ADJUSTABLE, BUT IF USING DIFFERENT OFFSETS IN
THE SAME BAND, THE MEMORIES DO NOT STORE THEM SEPARATELY MORE TO
FOLLOW

CC:
n2jtx@weca.org

Dear OM George:

We're a bit confused. . .
1. Perhaps your fan(s) have some mechanical problem; they are really
quiet normally.
2. OK.
3. Where did we advertise 78 memories per band (can't locate such a
statement myself)?
4. May I assume that the separate CTCSS tones are for a non-amateur
repeater?
5. Amateur satellites do not uplink and downlink on the same band.
6. True. . .but we did not want the compromises (additional Local
Oscillators with their attendant birdies, etc.) of dual receive on a
high-performance weak signal DX/satellite product.
7. Can't duplicate this one. . .what tone does this happen on? Our units
here work perfectly, but we're willing to listen in case we need
to know somthing.
8. The "Offset" is a fixed item. But you can store split memories to
your heart's content. This takes less time than messing around
with the re-setting of a "default" offset, to boot. Take another
look at the manual, and I'm sure you'll agree.
9. It's "YAESU," not "YEASU" (!).
We hope you'll enjoy the 847 on the upcoming E season, this weekend's
DUBUS EME Contest, as well as Phase 3D OSCAR.
73,
YAESU U.S.A.
C. H. Margelli
****
Thank you for your e-mail response.
Here is my response to your answers.

1. Fan's: Everyone who has seen my radio , comments on the fan noise.
2. MODE SCAN: We agree on.
3. 78 memories per band: In your 6 side, 3 page flier B9200227 under
POPULAR MEMORY AND SCANNING FEATURES it states "The ft-847 includes

78 regular memories (comma)" plus other types of memories (comma) and
ends with "and a HOME channel on each band (period) When people read
this sentence, they tend to believe that this radio has all of these
memory types, "on each band", because the period does not appear
until after the statement "on each band." VERY MISLEADING!!
4. Different CTCSS tones on repeaters XMIT and RCV: This is done on many
amateur 6 meter repeaters to eliminate problems while linking. The
Icom 706 Mark II will do this!
5. Satellite Memories: OK!
6. Cross band Repeat: You could have designed the radio to jump back and
forth between the main band frequency and the sub band frequency,
like the early duel band, single freq. mobile transceivers did.
(Icon 3210)
7. Radio speakers passes audio (for an instant) while in full
CTCSS decode:
Not just an occasional pop when voice frequency matches the tone, but
while scanning the memory channels, some being in decode. Plus the
speaker clicks occasionally while listening to a single
decoded memory channel.
8. Offset: I understand, But some modern radios memories (Icom
575H) will remember shift frequency, and not have to refer to the
current shift setting.
9. YEASU YEASU YEASU: Sorry about the spelling error.
10.And one more concern: The AF or Vol pot, on the low end. Does not
activate the audio at a low enough level for my taste.

Question: Are these typical problems that all FT-847's have,
or should I send this one in to have you look at it??

WB7VWK.GEORGE@worldnet.att.net

Dear OM George:

Thanks for your follow up.
1. Dunno. . .but will try to get some relative perspective on the fans.
3. Thank you. I feel better, although I do understand your point about
the sentence structure. That sentence could use a re-write, but
I hope you can see that there was no intent to mislead. I must
ask, though, how you would have the time to load even 78 memories,
much less 156?
4. Hmmm. Thanks for the information. Yes, the 706 will do this. No, the
706 isn't worth much as a satellite radio.
6. Ditto on the IC-3210 as a satellite radio. Your point is noted,
though.

7. Thanks for the further information. We'll look into it.
9. Thanks, Goerge Goerge Goerge.
10. Ah. . .the "big step" at the bottom! We'll look into that, too.
Please QRX for further information. Thanks again for the helpful
input.

Hello again Mr.Margelli,
Just a note to let you know, that I have returned my FT-847 for repair.
I finally got to view a properly working one, at the Seaside Oregon
Ham fair. The demo at SeaPac, had none of the problems that I mentioned
to you in earlier e-mail. The sales rep named Skip, said that repair
service, had fixes for all the physical problems that you and I talked
about. Hopefully, when I receive the radio back, all the defects will be
fixed and I will be able to get on with my life.
Just to mention, I'm sure you have seen the FT-847 site, at the
following URL. http://www.en.com/users/rayd/ft-847/
Very interesting postings!! Thanks, George WB7VWK
****
Dear OM George:

Thanks for your e-mail. We look forward to getting your 847, and getting
things resolved for you.

I don't know who "Skip" might have been at Seaside. The staff at Seaside
was Kevin and Chip, and the latter is me(!).

We'll get you taken care of, OB.

Dear OM George:

Your "baby" is here, and is getting better. I have a question, though:

Do you need this unit for the contest this weekend?

The CTCSS decoder is largely working, but there still is a little bleed-through on occasion. We don't know if we can get a solution by tomorrow or not, and if you need the 847 for the contest we need to ship it by then. I am confident of getting this resolved, but the exact day of a complete resolution is uncertain.

Please let me know, OM.

GEORGE NELSON wrote:
Hello again Chip,
Please keep my FT-847 as long as it takes, to correct all of the problems, even ones that you discover. Especially the CTCSS DECODE. As I said before, I did my best for about 5 minutes, to break through the CTCSS DECODE, on your display radio at Seaside. It worked perfectly. I understand that on occasion, with the proper voice frequency, a radio in PL or CG, CTCSS DECODE will pass a syllable or two through, to the speaker, but this should not happen very often. And it should never

happen, on just an unmodulated carrier.
I've also noticed, on the newsgroups and FT-847 web page, about questions people have about the PHONE JACK LEVEL. I have not plugged a headphone into my radio, but I would expect it to work properly, as all the radio's, I've owned sense 1963.
George WB7VWK
****
RRR. . .we're working on it.

As to the headphone level, I think we must have it right. Some guys gripe that the level is too low. Others have even posted mods to LOWER the headphone audio level. I think Goldilocks is at work here. I have both Yaesu and Heil headphones, and I blast my ears out at more than 50% advancement of the AF GAIN control. I think some Heils have low output (or a funny impedance), and that is behind the "low output" situation.

73 for now. . .

Hello Chip,
I received my FT-847 this afternoon, unpacked it, and immediately checked it out.
The first thing I checked, was the CTCSS DECODE. Nope, Not Fixed, it still does the same things it did before. Speaker clicks, when the radio is squelched in decode and white noise is occasionally emitted, when it is unsquelched in decode.
The AF control seems to be much better, but they didn't do anything with the rear fan, but that's OK.
The invoice says they replaced 17 assorted parts, I wonder what all the parts replacement fixes??
John Lynn called me, and asked questions about the decode problem. He suggested that I return the radio, and send him a copy of the UPS bill for refund. First one was $33.04.
Well, that's about it, I'm very discussed. The radio from hell, will be mailed back to you, tomorrow.(WED)

I have a Uniden BC200XLT scanner for sale. $210 shipped.
Bought radio new in box from fellow ham for $280 due to the collectivity of the radio. It is modified to receive the full 800 MHz band. Only used 3 times. Unfortunately I discarded the box a few moths back however, I do have the instructions, charger, case,and antenna for it. This has been in a non-smoking home and has been taken care of VERY well. If interested, email me at
bsfire@gulftel.com

I have for sale a very clean 2KW SB-220. This amp runs excellent with several Harbach Mods. Covers 80-10 meters. It has the larger cooling fan and larger Harbach Motor, it has the parasitic supressors installed and the soft start kit. It is one of the nicest I have ever seen. I have it set for 110V right now but can easily be changed to 220V. This amp has full power output out of two EIMAC 3-500Zs and comes with a manual. $650+shipping.

I didn't like the isolation type headphones, so I use a headset / boom mike like the ones you see on HT's. salvaged it from a telephone set. Steal some power from the microphone controls, or on many rigs there is already bias on the line. Use mine on my mobile and my base. Have under $15 in the entire set up. At a hamfest I bought a "computer" set of headphones with an electret mic for $5 still in the original package, but have not hooked up to the radio yet. I tested it with the computer and found the audio was fine in both directions.

I have in very good condition a Sailor Receiver Type R-1119
Sailor Exciter Type S-1303
and 500 watt Transmitter/220V Power supply Type T-1130
These are all rack mount units in great condition and operational when
taken out about a month ago. I have a complete set of manuals with all
the technical manuals included. They will require interconnecting wires
as they stayed with the rack. All are fully solid state. The exciter
has been updated with the new ITU frequencies. The
Amplifier/powersupply
can be used seperately as a 500 watt output linear amplifier. I have
photos upon request. $1500 for everything + shipping.

Hi Chriss I think I e-mailed you before about this heathkit before but you never responded , but will try again ! not knowing to much about this unit , Iasked how old was the amp? and if yu knew or not for surewhat kind of shapethe tubes are in ? I know they are quite expensive ?? Iunderstand some guys are converting those tubes to some russian tube? ans what kind of drive does it need ? I wouldbevery interested in it if you would just let me know what you now about this amp, I am assuming you got it used ? plese let me know ! maybe you have already gotten rid of it ?? if you want some stuff in trade for it I can make ytou a bettter deal than jsut 650 plus shipping and you could also come out withy cash to boot also ??? thanks Noel H3963@aol.com, 903 645 3486 fax 903 645 77746.

I unlike the others who answered have one on line, so too speak. I like the Unit am not interested in real high power, just want to be heard on occasion, when band just dont like a hundred watts. this is the first commercial amp that I've ever used all other amps that I've used over the years has been home brew. As for tube price these tubes new are going for around 20 bucks a piece now, a whole lot more than in the 60's but were near yr 2k now ..... buying resistors, not too sure what that fella was talking about, maybe its if over driven, or something....I only run this amp at about half power when I use it....I live in a RV trailer, don't have much room here and the unit is nice and compact....good luck and best 73s on ur choice of amps....tnx Steve

Mark:
Give it a good cleaning. Over the years the dust has collected.
(Electrostatic attraction). The voltage rating was finally exceeded
somewhere and there was a current pulse when it "arced over". If you
examine everything that has HV on it carefully, you may find a small tan
scortch mark, but most of the energy was, as you heard, expended as noise.
No damage, if the arc quenched itself. Get out the vacuum cleaner and a
dust brush. Enjoy your amp, I know I sure get a lot of use out of mine.

Hi Tom,

I think the best way to improve your range is to buy a base antenna with high gain. Put the antenna up at least 20 feet. This fits into your budget. Here is what I would do.

Buy 2 ten foot lengths of antenna mast, Radio Shack will charge you about $25 fot this. Now devise a way to support it. I cemented a short piece of pipe into the ground in line with the eave of my house. I put the bottom of the mast into the pipe and used a mast wall mounting bracket, Radio shack again, to clamp the mast to the eave. This gave me two firm grips on the mast about 8 feet apart.

The antenna I bought is one regularly seen at hamfests, but is too expensive from the stores. It is made by Tram, but goes under several names. Tech america has it for about $180, but I bought mine from The Antenna Source at http://www.presenceknown.com/antennas/ for $125. It is a vertical about 17 feet tall. Very good gain specs. However, you should be able to find this at a local hamfest.

Now, of course mount the antenna to the mast. You need no rotor for a vertical configuration.

Next, consider your feed line (coax). I used LMR 400 but there are many good ones. Plan on spending up to a dollar a foot for feed line. Don't cut corners here. Keep the line as short as possible. Use one piece of coax, avoid splicing shorter pieces together. You'll need a BNC adapter for the hand held. The antenna you decide on will determine the coax end connectors.

When you get it all together, beg borrow or buy an swr meter or antenna analyzer to check out your antenna system. Don't hesitate to get on a repeater and ask for help. Don't assume everthing is ok. Fix any coax problem you come up with and return the antenna if it will not give acceptable results.

Of course, this solution is difficult to take on the highway. So I might be way off track on what you are wanting.

Now here is the bad news. You have a hand held radio there and it is susceptable to intermod. This can be very annoying. You may feel, after you've been in the hobby for a while, that hand helds are best left to rubber ducks and mobile and base radios are better at handling strong signals as will be received on a good antenna. This does not meen that you cannot do it. I did for quite awhile. But that base antenna now has a mobile radio connected to it.

Good luck and don't hesitate to write!

I have a Kenwood TH-22AT 2 meter HT that I got in trade on some other equip. I would like to sell it if anyone has a use for it. The thing is that it seems to be about 5kHz off freq. Or that is what it seems to me. I do not have the equipment here necessary to check it out and do not need it. The RX and TX is great on it if you tune up 5kHz from the freq. you want. If anyone wants this HT I have all the original stuff, box, manual schematic, and everything for it, then let me know via. E-Mail at one of the addresses below and I'll send it out to you UPS ground for $55 to cover S&H for myself. Please let me know... thanks.... hopefully someone can use it, or better yet knows someone or has the ability to fix it and use it. Thanks...

>
>The radio shuts off at 3.6 volts and uses a nicad battery pack.

no, it doesn't. i suggest you consult yaesu's product guide. they offer a battery pack which holds 4 alkalines. as k3sls pointed out they also offer one which holds 6 alkalines. if you use rechargeable nicd's and try to recharge them it voids your warranty since charging has to be done thru the ht and their charger can't detect when the nicds are properly charged...so yaesu says.

Sir writes:

> What about it? Code test required.

Yup! I'm a + and will soon be a General<g>. CW is really addictive and it's amazing what you notice once you learrn it. Just the other day I was watching a AAMCO Transmission commercial on TV the other day. Their motto is "Double A, beep beep, M, C, O", it subconciously dawned on me that the "beep beep" is Morse for the M <g>. It's also nice to finally be able to know what the repeaters say when they ID.... it's not always just the callsign :) Anyways, CW may not be for eveybody, I guess that's why we have different license classes. There is a place for all of us in ths hobby!

>Also any pros or cons they feel about this unit.

I've got one, and have sometimes used it with a Yaesu FT-50 and FT-51.

It basically does what they claim. When used with a dual-band radio, you
can still receive on one band while transmitting on the other, thus
allowing cross-band repeating (if the radio is capable of that).

I provides a reasonable way of mechanically mounting and feeding power
to a handheld. It's a nice setup for operating from batteries, because
the standby current is basically just the HT's standby current - typically
about 50 mA. Mobile rigs often draw 1 A or so during receive, because
they are designed for use where current is plentiful.

If I was going to use it at full power in more than short conversations,
I'd add some sort of fan to cool the heat sink. It draws about 100 W
from the battery when transmitting at full power, and less than half is
radiated as RF. The rest ends up as heat, and the heat sink can get quite
hot - even though it's larger than the heat sink on a typical mobile rig.

Also, do keep in mind that your handheld plus the MAHA amplifier is *not*
equivalent to a real mobile radio. It will have about the same power as
a mobile, but the receiver filtering and overload performance will not
be as good as a mobile.

wf3h@ptd.net writes:

>the ft 50 has a battery pack that allows ONLY alkaline batteries (it
>voids your warranty if u use NiCds) and it holds only 4 batteries.
>this develops about 5v. at 4v the radio shuts off, so the pack isnt
>much use.

First, the pack says to use alkalines only because there is no current-limiting device (fuse or circuit breaker). Nicad packs need these, because shorting an AA nicad pack may give discharge currents of 10 or 20 amps - enough to melt things, or even start a fire. With alkalines, a short will give only a few amps - the internal resistance of the cells limits the current. So, it *works* to put nicad cells in this pack - it just isn't safe to do it.

Second, alkalines are 1.5-1.6 V when fresh, dropping to 1 V when almost discharged. The radio indicates "low battery" at about 4 V, and shuts down somewhere around 3.6 V. So the pack provides pretty much all the power the alkalines have in them for receive or low-power transmit.

Unfortunately, alkaline voltage drops under load, so transmit power is reduced with alkaline cells compared to the same number of NiCd cells (and the FT-50 NiCd packs all use at least 5 cells).

It sounds like your ideal for a radio is one with a battery holder that is designed to take either alkaline or NiCd cells, and will charge the NiCds. One of Icom's current radios does exactly that. It even uses 8 cells for full output power. But it's somewhat larger than the FT-50.

The FT-50 is a small radio, and needs small packs. You get to make your own tradeoffs. You can choose:

- small, half power output, short life

- medium size, full power output, short life

- large size, about half power output, long life

- medium size, half power, alkaline.

What other *small* radio does better?

Dave

>VX-5R has same attributes, and is smaller and has much faster battery
>charge.

Actually, you mean "the built-in charger is a fast charger on the VX-5 and a slow trickle charger on the FT-50". So on-radio charging is much faster with the VX-5.

But if you really want fast charging with the FT-50, you'd use an external fast charger - either the Yaesu NC-50, or something like one of the MAHA chargers. These will recharge the standard NiCd packs in under an hour.

I don't think lithium cells can handle a 1-hour charge rate, so they always take a few hours to recharge.

3958. New Version of Flexi-Tuner for the RX-320

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-14 00:00:00 UTC
From: mktg@ix.netcom.com
Message-ID: <37773533.5442846@nntp.ix.netcom.com>
Source record: 108317

May 14, 1999

Hello All,

The beta versions of Flexi-Tuner for the RX-320 are finally done and over with! Many thanks to the testers for their feedback and suggestions. All comments were very helpful.

Version 2.0 of Flexi-Tuner for the Ten-Tec RX-320 is now available for ordering.

Priced at $20.00, version 2.0 is an inexpensive way to take advantage of the features on the RX-320 that Ten-Tec did not implement and, at the same time, to have a control program for both DOS and Windows.

The major features of Version 2.0 of Flexi-Tuner for the Ten-Tec RX-320 are as follows:

1. Operates the RX-320 from virtually any desktop or laptop computer, including older 386 machines. An excellent use for that old 386 machine in the closet or one of the many $100 older laptops available at pawn shops and used computer stores.
2. Works in either DOS or Windows (this is a DOS program with a DOS interface).
3. Implements 34 selectivity filters from 8Khz to 300Hz.
4. All modes: AM, USB, LSB, CW.
5. AGC implemented: Fast, Medium, Slow.
6. Tuning steps down go 1 Hz or up to 1 Mhz, including 9Khz and 3Khz.
7. Adjustable squelch.
8. Bandpass tuning for CW and SSB (offset from center freq.)
9. Scanning using scan files. Adjustable parameters.
New! You can now have up to 200 scan files with as many 100 entries in each.
10. Built-in scan file editor.
New! You can now tune to any entry while in the scan file editor.
11. Built-in logging function with log editor. Easily track, edit, sort, monitor, and export log entries. Items logged include station name (or notation), frequency, mode, filter, date, time, and S-meter reading. Time and date can be adjusted if you want to log in UTC or other time zone.
New! Sort by time added to the log editor.
12. More sensitive S-meter.

13. Pause S-meter function on front panel. This eliminates
the "chuffing" heard on some RX-320 systems.
New! 14. Instantly mute audio with a single key.
15. Almost all parameters adjustable (great for knob twiddlers
like me).
16. Tighter code for faster operation.
17. No mouse required (or supported).
New! 18. Supports color, B&W, and inverted B&W monitors (CGA or
better, including B&W VGA monitors).

The program is supplied along with several scan files in a single zip
file. It can be sent to you either by e-mail or regular mail on floppy
disk. Installation and removal are simple, as the program does not
affect any system settings. Operation is also straightforward -- just
press various keys as shown on the screen.

Installation, removal, and operating instructions are included.

I would be pleased to send you Version 2.0 of Flexi-Tuner for the
RX-320.

Regards and 73,

David
W7HTJ

P.S. A demo version is available at no charge. It has all the features
of Version 2.0 except that the number of scan files is limited 25, each
scan file can hold 25 records, and the log file is limited to 250 en-
tries. An RX-320 is needed in order for the demo to function.

RX-320 Flexi-Tuner V. 2.0

How To Order

The full program, Flexi-Tuner Version 2.0, is available for purchase.
Shipment can be made by e-mail or on diskette by regular mail.

Price: $20.00 US for shipment by e-mail.
$25.00 US on diskette shipped by regular mail.

Send payment (check or money order) in favor of David C. Andresen.

I love my FT-50 and don't plan on parting with it any time soon!
wf3h@ptd.net wrote in message <373a3b54.87779202@news.ptd.net>...
>Anybody notice how poorly designed the batteries are for the FT 50,
>especially for those of us who use the radio for public
>service/emergency service
You have the wrong batteries! Get the FNB-47 7.2V 1800mAh Nickel
Metal-Hydride pack from Periphex or another supplier. Mine last about a
weekend with average use, including using the base or mobile rig instead of
the HT where practical. Recharges at 100mA in about 26 hours and about 13
hours at 200mA. Provides about 2.5 watts output.
>with my old ic 2sat, i could put 6 AA NiCd batteries in a battery
>pack (sold by icom). these could be recharged off the ht. and 6
>batteries gave about 8 v.
>
The 4 AA pack is intended for alkalines ONLY for emergency use--where your
standard packs have been depleted and you can't recharge them. Why do you
want to use this pack all the time? It is not intended for use as a primary
pack.
>the ft 50 has a battery pack that allows ONLY alkaline batteries (it
>voids your warranty if u use NiCds) and it holds only 4 batteries.
>this develops about 5v. at 4v the radio shuts off, so the pack isnt
>much use.

Mine shuts off between 3.8 and 3.6 volts according to the meter on my radio.
>in addition the large 1100 mahr battery is too large to allow the
>radio to fit in yaesu's own carrying case for the radio so you're
>forced to carry the damn thing in your hand.

You have the wrong case! Get the cordura nylon case with the metal spring
belt clip. It will accomodate the FT-50 with ALL battery packs made for it!
Yaesu VERTEX CSC-V10, case for VX-10 series handhelds with FNB-V47 battery
pack. About $27.00 at your better radio stores! The case is well made, has
expandable sides to accomodate the radio with any pack, has a velcro strap
across the top of the battery, has a clear plastic front for easy visability
of all function buttons, a hole on the side for a speaker mic, and affords
much protection for the radio!
>if i hadn't received the damn thing as a gift, i wouldnt buy it!
You could "gift" it to me!

>had expected.

While my pro-am has stayed on the car just fine, I took a tip from my brother when I installed it and tied it off with a bit of fishing line. That way if it did blow off(the way my brother's Larsen did at first), it wasn't lost entirely. You then have a chance to re-mount it with something a bit more solid.

I don't normally post on this group, but this is so important that it needs to get out as quickly as possible before anybody else gets burned.

Late last month (April) I had put a Tait repeater up for sale on Ebay. It was bid on by quite a few different persons. The high bidder on it didn't contact me for four days and finally sent an email backing out of the deal. This resulted in a negative feedback being placed which made it public knowledge that he had back out.

Two days ago I was contacted by two of the higher bidders. Each had been contacted by a person in Spring Valley, California wanting to know if they were still willing to honor their bid on the repeater! Now this is the very same repeater sitting in my shop as I type this! Since the email address of the seller in the original auction was overlooked (you would have to do a search of past auctions to get a peek at it) this person played the part very well as the owner and managed to get two money orders sent to him.

The address he uses is a mail drop on Campo Rd in Spring Valley, CA. If you see this street come up in any dealings with a person out in that area BEWARE!

PLEASE if you have been or get contacted by anybody on Ebay who wants to pursue a bid you made on an item, double check his email address from the original auction page.

Ebay has been notified and I'm pushing to get the bidding history either removed or modified to notify all involved that the history has been accessed.

Thank you for taking the time to read.

Antique Western Electric 509W headphones.

I'm not into the ham thing, so I have no idea who these people are.
The previous owner told me that these belonged to a man named Uncle Henry
who was a famous telegrapher who taught T.R. McElroy the code.

Funny,
I sold mine recently on e-bay (didn't give any details as to frequency range,
etc)
and I recieved $195 for it!

Cell phone capable scanners are going for a little more these days.

I use the four cell alkaline case with rechargable Ray-O-Vac alkaline batteries. I get a FULL day's use out of them EVERY day. I don't do a trememdous amount of talking, and try to confine it to the lowest power setting. Cross banding to a mobile rig works wonders! Keep power low, batteries last long.

Have used the rechargable alkalines for over three years with tremendous success. Didn't know there was a six cell case for the 50. Will certainly investigate - sounds like a winning combination to me!.

Hello,

I have for sale an inexpensive HF station consisting of the Yaesu FT-840 HF tranceiver, matching FC-10 auto antenna tuner, and Astron RS-20A power supply. These are all less than 9 months old and in perfect physical and electrical condition. I have all manuals and cables, but no original boxes-- the wife got to them first :-(This would make an outstanding beginner's station. Current HRO pricing for the lot would be $1236.85. I'll let them go for $800.00 plus shipping.

I have a really nice Icom IC 756 HF and 6 meter for sale.
True Dual Watch, monitor two different freq. on the same band at the same time, 4.9" LCD Dot Matrix Display with Spectrum Scope, Alpha Numeric Memories, Auto Antenna tuner, Quadruple Conversion Superheterodyne Reciever, 101 Memory Channels, Auto DSP Controlled Notch Filter, Twin Pass Band Tuning, Power Mos FET's, Built in Memory Keyer, PC Programmable, and Speach Synthesizer option available, (not installed in this rig yet). Also IF-DSP, and 100 watts out on HF and 50MHz.
I need $ 1,650.00 for this rig and to answer the questions about the serial number, it is 2257 and I called Icom Tech Support and they told me that this rig had all the mods that have been done to the late model Icom 756's, I bought this rig one year ago. The number to Icom Tech Support to verify this information is: 425-454-8155
You will not be dissapointed in this radio, it is a a nice one.!!
Picture on request for interested buyers.

From: Dave Maley <dgmaley@inav.net>
Message-ID: <7hk64ljqe1@composer.inav.net>
Source record: 108150

I also have this amp. I believe he is talking about the 52 ohm
2 watt grid resistor that will be destroyed if one of the tubes
should arc. Ameritron tests the tubes before installing them,
but every once in a while, a tube gets through that will arc between
plate and grid. This arc burns out this resistor. The problem is
replacing the resistor requires removing the entire RF deck to
get to it. Ameritron knows about it and sends out the parts, and
a new tube. Do not a conventional carbon film resistor here. Use
a carbon comp. or a film resistor designed for RF.
Dave....

R.Steven Smith wrote in message

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

How about your 440 Mhz monobander? I was considering purchasing one
to add to my vehicle, but I didn't know anyone who happened to own
one offhand. Main thing I'm looking for is intermod protection.. I
have a yaesu ft2500M, and that works good on 2M... but now I need
something for 440. I used to have a kenwood TMV7A in the car, but
took it out cause it was always getting thrashed by intermod, on both
bands.

-Mike

3993. ANY MODS FOR THE 706IIG????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-15 00:00:00 UTC
From: Tom Seabury <tseabury@value.net>
Message-ID: <373DA281.1478181@value.net>
Source record: 108153

Does anybody have the mods for the 706IIG yet?
I'm also very interested in the limits (both xmit and receive) of the uhf band.

Also, does it receive the 220 band by any chance ?
Thanks,

de KO6RO
Tom

Message-ID: <19990515140320.02902.00000841@ng-fq1.aol.com>
Source record: 108158

I sent this question to MFJ, but they didn't return a reply.

My 9420's headphone jack broke so I removed it. After, i connected the speaker directly to the "Speaker" output wires on the circuit board. Observing th ecorrect polarity, all I get is a "buzz" to any 8 ohm speaker. However, when I connect it to my Radio Shack DSP, or Amplified Mobile speaker, it works just fine?

Ant thoughts? The RS speaker is 4 ohms, perhaps a mismatch? The internal speaker was wired through the headphone jack and there was a resistor on it. How do you make an 8 ohm speaker to 4 ohms?

Thanks,

Mike

I think you may be responding to the wrong post here...I have the
Kenwood HF Transceiver for sale, not an amp.

If you're interested in the transceiver, respond to the sender (me) and
we can discuss, though you mention in your other post that you are
looking for something mostly for 10 and 11 meters. If that's the case,
this probably isn't the rig for you.

(The email associated with this post is not modified, so it should not
bounce. eludes@earthlink.net is the correct address.)

73,

Hi TCT, well.... "Better/Equal" is a tall order.
The Yaesu 100 will do HF - 6m - 2m.
Only the newer radios have that coverage.
If all you are interested in is HF then look at the older Icom 735, Kenwood TS-430, or the TS 440 with a built in tuner.
Also there is the Kenwood TS-50, and Lets not forget the Ten-Tec Scout 555.

The bigest thing to overcome in mobile operation it the electrical noise the vehicle makes.
If you cant hear any radio noise difference with the engine running or not then you got it made.

William Lee N5WRX

William, TWO CENTS !! Ya paid too much! Hi Hi
Hey.... if someone wants to pay twice the price for something ... that is
their business.
What I dont like is all the baiting that goes on.
You know ... things like "very rare" "Hurry!" and "Only $10 for a new
Collins S line".
Plus the fact that the sellers often bid on their own stuff under an assumed
name to get the price up.
If I see something I want on eBay I wait until the last 30 seconds of the
auction to bid and then I only bid what I want to pay.
That is called sniping and most successful bidders on eBay use that tactic.
Why bid on something any sooner and let someone over bid you. That just runs
up the price.
Let the high bidder think he has it until the last seconds and then WHAM!
Those are the economic facts of life at eBay, like it or not.

Radio is in excellent condition,is the 403 to 470 version with full keypad.Model # HO5RDH9AN7BN.Radio is presently programmed on some ham channels and some commercial channels.Transmitter puts out 5 watts and the receive sensitvity is good.The problem is none of the local motorola shops have a late enough version of software to program it.Motorola parts id took the serial and model number and said due to changes it would require version R03.03.00 or later software to program it.I have no use for it if i can not put it on frequencies i can use.It is avaliable for $250 as is .
Thanks AL

Stereo-Doppler Microwave Intrusion Detector.

This unit was manufactured by Protection Technologies in late '94. It is brand new unopened in the box (I am currently using the one in the photo). The unit uses microwave RF energy at 10.525 GHz to flood an area 80x80' (adjustable down to 8x8'), and detect intruders moving at rates between 3 inches/sec and 10 miles/hour. The unique 2-channel Stereo Doppler signal processing allows the unit to discriminate between annoying false alarms generated by rythmic or cyclic motions caused by ceiling fans or wind vibration, etc. The unit model number is SD-80 and is complete with mounting L-bracket with hardware, and operator/schematic manual. This is a professional unit, not a Radio Shack alarm toy. Original cost was $425. Dimensions are approx 4x6x8" in a rugged, attractive case. Requires 10-14 VDC at about 3 watts and operates simple relay contact closure systems. The manual is very detailed and discusses how to incorporate this unit with standard and custom alarm system. I am only auctioning one of these now, but if demand is high, I have 3 more and can sell additional units to a willing buyer to build an entire system. See the picture at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=102107090

only 1 day left and the current price is $50, thanks.

I have purchased from HRO via 800 number and over-the-counter. Never had a problem. I deal with the store in Woodbridge, VA.

Has the thought occurred to you that there are things you could do to alleviate the situation, other than posting on the internet -- such as:

1. Call HRO and work it out with them.
2. Call your credit card company and tell them that you were mis-charged. They will not honor the charge until things are straightened out.

Maybe when it is all straight you will post the rest of the story.

From: Paul Cooper <pcooper@primenet.com>
Message-ID: <373E6426.1A9740C8@primenet.com>
Source record: 108190

During the last week of June, I may wish to sell my Tri-ex LM-354 with foldover base and 40/1 winch, including my Sommers 7 element Log Periodic type antenna with the 40 meter attachment. The LM-354 was restrung in 1993.

The Sommers antenna has been on the tower since June of 1993 and is one of the world's premiere radiators; it has never had to be worked on since it was put up and has close to 1.5:1 or lower VSWR across the entire band on every band except 40; 40 meters exhibits the same VSWR curve as a tuned yagi.

We will move to Oregon at the beginning of July. If I do the labor of removal and packaging of the antenna and also take the tower down, then I shall take them with me to use there. In this sale, the buyer must do the labor.

If you are interested, the contact data is below.

Looking to buy or trade for a Syntor X 9000 64 Channel Control Head.
Please respond with price and shipping info to EDatBCFR@aol.com.

I currently have for sale or trade 2 Syntor X 9000 64 channel 110 watt
units with hand held control head with encryption boxes (secure
housings) and 1 additional setup without the drawer unit. These are
neat because one hand held control head can operate 2 seperate radio
drawers, ie: 1 vhf and 1 uhf. I have the RSS software and I can program
these units for you also. Please contact me via email for more info.
Thanks.

RX 100-230MHz, 300-530MHz, 810-1000MHz, including air, excluding
cellular

Built-in packet-ability

CTCSS - and DCS - encode and decode standard.

186 memories

7-character alpha-numeric labelling for each channel

I am not sure if it comes with the DTMF mike - probably does.

ADMS-compatible.

IF YOU CAN GET BY with just 2 Meters, ADI premiere's their AR-147 this
week, too: great price, also with CTCSS/DCS en-decoding.

Comments about this ad.

1) The TS-870 has NO plug in filters (I wish it did)
2) This filter does fit the TS-850 however and would be a great addition
for the CW op.
3) The advertised bandwidth of this filter is 270Hz NOT 300Hz

Hi everybody,

I looked into my Radio Shack 2m amp (HTA-20) and saw a couple of poti's or something like that (couldn't tell the difference) with a drop of blue glue on them. Could those be changed so the amp can be used outside of 144-148 MHz? If yes, how?

Thanks ahead,
Timo

Its not just a case of wiring pin for pin. A friend has the radio and
tried to wire a mobile mic up and it failed. The Yaesu mic has some
electronics in it for all the buttons in the mic.

Be interested to hear if someone has managed this though!

A while back, I had heard of ham living in New Mexico (USA), by the first name
of Bill, that did mods for some ICOM transceivers. (Bill) apparently replaced
some of the IF diodes for pin diodes reducing receive noise floor considerably ...
possibly along the lines Dr. Ulrich Rodhe's designs.

If anyone knows of Bill in Mew Mexico and/or how to get a hold of him ...
I would very much appreciate it.

thanks in advance,
-- mark.

The 1000MP has some great features, but relatively high speed (25 WPM +)
QSK CW is not one of them. The AGC circuit does not allow the receiver to
recover in time to hear between characters ...

4068. Need Help With Overdrive Protection

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <7hnf1c$lf1$1@news2.bit-net.com>
Source record: 108051
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I am well along the path to building my 1KW 160-6m
solid state amp. I want to defend the finals (a pair of
MRF154's) with an input circuit to limit potential overdrive.

I see two options:

1. Use a 100W (4dB) pad which I understand will divide
whatever the input power is by 4 and send 3/4 of it into a
dummy load and 1/4 to the amp. That way with 100 watts
of drive the amp. only sees about 25 watts.

25 watts should give full power. Pieter N4IP who has built
one of these (see: http://www.ibelings.com/n4ip/sskw/) says
he has accidently keyed 100W into his amp on multiple
occasions and nothing blew up. He says the MRF154/157
transistors are very rugged.

2. A peak power detector that feeds a voltage to a circuit
that trips the COR if the 25 watt drive threshold is exceeded.

Option 2 is better because I can run the drive rig at lower
output thus extending the life of that rig. Option 1 is simpler ...

I am seeking your advice and your favorite circuit(s) to
accomplish either or both.

Thanks! & 73, DavidC K1YP@qsl.net

Cutting here -n- there from all the threads:

> What if you wanted to play the flute, but a law required that you learn
> how to play the harp before you were allowed to play the flute?
>
> What if you didn't like the harp and only wanted to play the flute, and
> other flute players called you lazy for not wanting to waste time
> learning an instrument you had no intention of ever playing?
>
> They have no desire to use morse code. How silly it would be to waste
> the time to learn morse code, only to forget it once one has the license
> to go ahead and use voice.
>
> Only people who intend to USE morse code should learn it.

90% of the automobile drivers out there don't intend to use anything
they *learned* to get their drivers license, why not drop that
requirement too? Just let 'em all drive, drop the roadtest
requirement!

>That's ok we can argue all we want about keeping the code test, but something
>needs to be done to bring people into amateur radio not keep them out.

Ever stop to think that maybe the government intended to keep some
people out? Why not drop the code requirment for commercial broadcast
while we're at it?

>I suspect the same small fraction of 13 year olds are still learning code. Like many
>things that require a little work up front, CW is worth it.
>73

And worth some pride too... ever heard of the rite of passage. Why
not do *something* you can take pride in instead of changing the rules
so you don't have to apply hardly any effort?

> If you're not wired for it, there are many other modes to use. That is one of the
> beauties of ham radio.

Absolutly!!! The whole spectrum above 50 mhz is wide open for those
who have no interest in CW. You knew it before you got into radio...
So what's the problem? (but be forwarned... you'll hear alot of CW
there too. Moonbounce, contesting, etc.)

>The key to keeping code from dying is those of you who are proficient MUST take
>those of us willing to learn under your wing and pass it on to us....

Seems all the *old Timers* around here left me to my own devices...
Wonder *how* I did it..... hmmmmm

>If you efforts to find someone in Ft. Worth fail, Why dont you and your
>buddies get on the 2 meter radio and teach each other?

5 wpm is NO CODE. It's like an open book test. If you *try* to learn
the code with *any* effort at all, you *will* pass the 5 WPM test.
From there you'll meet hundreds of others in the same boat on 40 & 80
mtrs.
Plenty of practice to hone your skills. I had a problem getting over

10 wpm myself once licensed as a P, but got on the air with a friend
of mine for an hour a nite over the period of a week, pushing
ourselves to the limit, and passed General that weekend. *USE IT* once
you get it.

> I have the skill to pass the practical test (and have with the training software) through
> Advanced, yet I hold only a Tech ticket because of the code. I am still trying but I
> haven't found my method for learning code yet. I memorized the tapes, and have tried a
> couple of different computer tutor programs, but so far I have not been able to master
CW.
> I will get it eventually, but it is not coming easy.

Sounds about normal to me...
if you study... it will come......

>If your son doesn't have to learn or like radio to enjoy Morse Code,
>then people who want to use or like radio do not have to learn Morse
>Code.

Did you're mama ever say "who ever said life was fair?" Just 'cause
you want to learn gun handling doesn't mean you have to kill someone.
I don't have a son, but I have to pay school tax.... WHAAAAA!

Hope I hit a few sore neves here. Amateur radio isn't the only thing
in life that will require you to learn something proficiently to do
(unlike my spelling to post to the group).

Take a look back at all the things that got lax on the rules in the
past and see what happened to them. Do you really want amateur radio
to go that route?

The hardest part about learning the code is to just put away all
the excuses you have as to why you < can't / don't have time for /
shouldn't have to / are just to darn lazy to > learn the code *and do
it.*

Next thing you know, after they start packaging up an extra class
radio amateur operators license in all the HF radios (sound familiar?)
They'll be whining that the FCC should abolish CW off the airwaves
'cause they can't handle not being able to understand what is going on
on the bottom half of the band.

I might could stomach letting a small portion of the prime DX bands go for the slow coders (P's),and leave the rest of the licese structure alone. But I hope at least that they leave the extra class alone so that *some* of us can keep a little pride in something that we *worked for* instead of crying about it 'till we got it for next to nothing.

If anyone out there is interested in *learning* CW and going to EXTRA in 6 months, e-mail me. All it requires is about 4 hours a week of *dedication*... You have to *want to do it* to do it.

The others.... FLAME AWAY, got my asbestos boxers on.

Breaker Breaker x.19x.xxx.xxx, catch me on the bottom 150 khz of the band good buddy, c'mon back!

I am looking for an integrated circuit solution that would have a RF transmit chip and a RF receive chip. I am trying to transmit low bandwidth data about 3 meters without any wires. The transmitter needs to be as small as possible. Obviously I do not need a lot of power.
Does anyone have recommendations on particular chips which may be connected to an approriate antenna for transmission. I would think that the RC hobbiest and the wireless telephone industries would have a need for these type of chips.
Thanks in advance. Please not spam free address.

>Tim Randa wrote:

>> Tony...you left the best cw rig off your list..Ten-Tec Omni-VI plus

>is the omni a double conversion rx? wondering.

Yes. The OMNI V and VI both use 9 MHz for the first IF and
6.3 MHz for the 2nd IF. The first IF uses a stock 2.4 KHz
8 pole crystal filter ahead of one other possible optional
filter at the 9 MHz IF, then followed by one other optional filter
(or the 2.4 KHz stock filter) in the 2nd IF at 6.3 MHz. This
is said to be a real advantage since the 1st IF has a good,
narrow filter in there at all times for SSB and CW, unlike
most all other late model rigs that have a very wide filter
for FM in the 1st IF.

If you are not so concerned with SSB, my own experience tells me
that the OMNI VI may well be better than the ones you list, but
for SSB it may be equal, but not having some of the cooler features.

>replaced
>some of the IF diodes for pin diodes reducing receive noise floor
>considerably ...
>

Mark: I don't know about Bill, but I had my Yaesu 890 converted to the pin_diode mode by KK7TV. He is a factory authorized fixer of Icoms also, so you might want to check him out. He has a web site, but due to a MAJOR cockpit error, I don't have a URL handy. While the actual reduction in noise floor can be measured, I'm quite satisfied with the warm_and _fuzzy feeling that I get from having the mode done! When I save up the coins, I'll send him my 990 to have the diodes replaced in it.

4077. Kenwood TM-733A control head commands

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: Emarit Ranu <ranu.1@osu.edu>
Message-ID: <373F672F.39FE9551@osu.edu>
Source record: 108060

.
The time is nearing where I can sit down with a 733A and begin
to document the communications between the control head and
main unit. My plan is to eventually develop a program to
control the 733A completely from a computer since it seems
the control head has no more functionality than to tell the
main unit where to tune, volume level, etc.

So, is anyone or has anyone worked on this? Will I be
reinventing the wheel? I won't get to it until July, but if
anyone has worked on this before, I'd like to get in touch.

Hi gang,

I had purchased a Butternut HF-2V vertical from HRO in
Salem, NH. The Butternut was not complete with some parts
missing. HRO sent me a replacement the same day I phone them
and also a UPS call tag to return the original.

I think that is great service. Guess where I continue to
shop?

Maybe I can help.

There is a mod for the "hot mic", go to:

http://24.0.146.59/hamradio/2710h.htm

Hope this helps, but you are making me nervous about you comments. I do need the extra features, but actually head that the intermod immunity was excellent with this radio, but perhaps not?

Anyway, thanks for the comments

So...instead of FIRST contacting your dealer to explain the problem...

You decided to post your story here.

I believe most reasonable folks would simply call their dealer up the
first available opportunity and deal with the matter at hand.

NO - HRO has no long "history" of mistreating their cleints.

I certainly hope that (a) you have been totally truthful with your story
here, and (b) as soon as HRO clears this matter up with you, that you'll
post the entire solution arrived at.

Well, the best way to insure that a company like this doesn't
mess with you is to order everything by credit card. When they
overcharge / fail to ship / ship wrong product, etc, you just
call up the credit card company and tell them that you were not
charged fairly, and to cancel payment of the charge to the card.

I've only had to do this once, and the problem I had with the
company was cleared up in about 12 hours, and they overnighted
me the correct product, along with a container to mail the incorrect
product back to them, postage paid. This was alot better than
trying to convince the operator at the end of the "hold for 20
minutes" line that I actually had been shipped the wrong product..

Obviously this guy could not argue with what you said, so he had to attack how you said it. Poor form. Personnaly I have an FT-50, and it is GREAT. I use a 1900 mAh 7.2 VDC batt from W&W and it runs the radio for about 30-35 hours, limited talking but continuous monitoring, on 12 hrs of charge of 200 mAh@10-12 VDC.

4106. FT-51R DTMF decoder

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: *dwebb2*@revealed.net
Message-ID: <373e325e.226816397@enews.newsguy.com>
Source record: 108207

I used to know how to get my FT51R to decode DTMF,
and display it on the LCD.

But that was a couple of years ago, and I had to consult
a web page to figure it out.

The instructions that come with it SUCK.
And I can't find any information on the web about it.

Can anyone refresh my memory on how to get
the radio to display decoded DTMF.

Thanks,

Dave webb

4111. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7hlss8$1m4@news.Hawaii.Edu>
Source record: 108212
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

And not only do people bid during the last 30 secs., ya gotta believe that a seller may have his buddy outbid the high bidder toward the end--just in case the high bidder had a higher proxy bid. I recently bought an Astron supply through ebay...the deal went fine, although I did see someone try to outbid me in the last minute. THe price was fair and the unti worked fine...but...you never know.

4120. YAESU VX5R and Accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: E-Mail <w3yb@erols.com>
Message-ID: <7hmjrd$5jm$1@autumn.news.rcn.net>
Source record: 108221

I have the following I will sell to be best reasonable offer:

1. VX5R Transceiver Serial Number 8L010387, unmodified in any way, new condition, box, warranty card, purchase receipt.
2. Yaesu Soft Case CSC-73.
3. Diamond SRH-519 144/430 MHZ SMA antenna. On 144 and 430 MHZ, this is far superior to the supplied antenna. It is very flexible.
4. E-DC-6 Power Cable, connected to cigarette lighter plug with LED, with 3A fuse (installed inside plug). This allows for radio operation at full power while plugged into the automobile cigarette lighter.
5. Pryme SPM-100 Speaker-Mike. This is far better than the Yaesu Speaker-Mike (in my opinion).
6. Yaesu CD-15 drop in battery charger. Can be used with the E-ED-6 Power Cable or the Yaesu default NC-72B power cube supplied with the VX5.
7. SMA to BNC adapter.
8. ADMS-1E Programming Software with computer cable and special adapter for VX1 and VX5 radios. This is the updated version of software (late April 1999).

Your offer should allow for packaging, shipping and insurance from zip code 22701 (Northern Virginia).

Reason for selling: I love the radio, but since purchase, it has essentially sat on my desk unused. Just no time to enjoy it with my work and other activities. Please respond directly to w3yb@erols.com .

Hi gang,

Sorry to post this subject again but here is my sob story...

Yesterday I picked up the Hallicrafters book by Dachis and found that a R-12 is not the same as a R-12-T. I'm _really_ looking for a R-12-T table top speaker. If you have one that you want to part with please give me a call collect at 515-243-5293. If I don't get right to the phone please leave a message and I'll call right back. Of course email is OK too. Thanks and 73,

Al
KE3OK@aol.com

4123. Re: FT-51R DTMF decoder

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: bd480@freenet.carleton.ca
Message-ID: <7hmjdr$jjs@freenet-news.carleton.ca>
Source record: 108224

You need to enable the Message ID first.
1. you select FM MSG, you can have MSG or MSGid in the left of the display.
2. select FM CALL, this will put a phone on the right of the display.
3. select FM for 2 sec and select 9. The memory 9 is where the 16 tones
will be decoded.

If you want to see the last one that came in, use the dial and schroll all
the way to the right. The trick is the MSG need to be selected. The MSG
will enable the decoder to work all the time to diplay a message.
Good luck from VE2PEY, Eric.

4127. FT757 linear connections question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-16 00:00:00 UTC
From: rick@area.com
Message-ID: <7hmn7tetk1@vax.area.com>
Source record: 108228

I am trying to interface my FT757 to a linear. The manual shows
non QSK linears are connected to PTT, which I measured with my
scope to have a 25 msec head start before RF comes out of the
transceiver. It shows QSK linears connected to "TX GND" on
the band info connector, which I measured to have a 5 msec
head start before RF appears. It also shows an "Inhibit" connection
that the manual implies allows the linear to hold off the
transmitter until its T/R relay has been activated. There is
a "linear" switch that is supposed to be pushed if and only
if a QSK linear is used. When this switch is in the non QSK position
it clearly shorts the inhibit input to ground on the inboard side
of a series diode.

Here's the mystery. The linear switch seems to have no effect
one way or the other, nor does the inhibit input. On the schematic,
it shows the INH signal going from the local to the RF board at
which point it is grounded! So it appears like the feature has
been defeated internally without changing the documentation to
reflect that.

Can anyone clear this up?

Rick Karlquist N6RK

4128. IC 706 AMP INTERFACE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-17 00:00:00 UTC
From: Jack Schuster <w1wef@snet.net>
Message-ID: <3740BF03.D9DB5D80@snet.net>
Source record: 107980

To control an amplifier relay from an ICOM IC706, it is necessary to use the 13 pin DIN accessory connector on the rear of the 706. The 706 can only sink 20 ma max, at low voltage. Most amplifiers require more current than that, and some like the Heathkit amps have 125 VDC or so open circuit.

The W1WEF 706 AMPLIFIER INTERFACE plugs into the rear accessory connector, and provides a phono jack to which you can run a cable directly to the relay connector on any HF/6M amplifier. ONLY $29 plus $3 S&H.

Order from Jack Schuster, W1WEF, 408 Thompson St, Glastonbury, CT 06033

In 1997 I purchased a Kent Engineering twin paddle iambic keyer (TP-1) at the Hamvention in Dayton. I eventually sold the keyer and was hoping to buy another this year, but the Kent dealer did not attend and I was unable to find another who was selling Kent keyers.

Anyone know where I can get a good deal on a new TP-1 kit?

Otherwise, does anyone have the mailing address, or better yet, a web or email address of the Kent Engineering Co. in England? I searched the web and came up empty.

Ya, those are the seperation kits needed to place the rig, say
in your trunk and the control head on your dash. What I'm planning
to do is decode the data between the control head and main unit
so I can ditch the control head entirely and control the main
unit completely from a computer.

Joe please try to find it in your heart to forgive me for daring to criticize you. You did however miss the message. The comment on the price was only an aside the real message was that there is a sale group and this group is not it. But what the heck rules don't actually apply to you do they? Nah the trailer payment was due and nothing else really mattered. After all ARPA developed the internet concept so you could have free advertizing. I paid $75 more for my 756 but it was new with a warranty so I guess that's fair.

4143. Icom PS85 RF noise

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-17 00:00:00 UTC
From: greenpjs@neo.rr.com
Message-ID: <37409e59.3826223@news-server>
Source record: 107995

I recently moved my IC-746 and needed an AC power supply for it. I purchased an Icom PS-85, plugged it in and turned it on. Everything works except there is lots of hashy noise including a "cruddy" sounding signal every 85kHz or so from VLF all the way up through 10 meters. I assumed some neighbor's TV was putting out the signal and its harmonics, but later noticed that the signals drift when I first turn on the radio. Guess what? It's the PS-85. I dragged a battery inside and ran the IC746 from battery. All the offending signals are gone. Turn on the PS-85 even when disconnected from the radio and all the crud returns. Any ideas before I return the supply? Could this be a grounding problem? A missing ground strap internally to the supply? Did they leave off ferrite beads at the factory? If anyone has a PS-85 with nearby antennas *without* similar symptoms, let me know that, too. I know switching supplies generate this type of crud *internally* but I think Icom is better than letting it leak out!
Thanks,
Pat

4144. Shopping for a new dual band handheld. Any advice?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-17 00:00:00 UTC
From: journel@videotron.ca
Message-ID: <ru103.4634$w25.53975@weber.videotron.net>

Hi,

I'm planning to buy a new dual band handheld.

I like Kenwood because I already have a TH78 but I'm willing to look at
other brands.

Thanks for your advice.

I am trying to get my Kenwood programer working for doing the kenwood TK 930 and TK 940 mobiles. So far it doesn't seem to communicate with the radios. I have searched the web and found two schematics for a programer but the wiring to the mike connectors do not match each other. Can anybody clue me into the correct pin out for the mike connector. My programmer uses a 5 volt regulator and obtains its power from the mike connector. Please respond by email Thanks Don KB6GQA.

Definitely build yourself a J-pole! Check out the link below. I built this thing a couple of weeks ago for well under $10 and it works like gangbusters on both 2 meters and 440! Used to need 25 watts to hit one of our 2 meter repeaters about 25 miles away, now I hit it using low power on my handheld. Check it out.

Message-ID: <qo303.6$H2.146980@news.apex.net>
Source record: 108004

Folks,

A couple of years ago my father passed away and left a garage full of electronic "stuff" about which I know next to nothing, but cannot bring myself to throw away. He was an electronic/instrument enginneer who built a lot of test equipment. I have everything from periodicals from the '50s to old tube testers, vacuum tubes, signal generators, an oscilloscope, an old National transciever and on and on.....

Is anyone interested? Is there a market? Does anyone want or need things of this nature? If anyone does.....I would like to see it go somewhere other than the dump.

Please let me know if I should go to a particular website with this request. Most of the equipment is Heathkit stuff that he assembled. I live in far western Kentucky.....if you have an interest you can e-mail me at jcarpen@apex.net

Thanks in advance!

> 90% of the automobile drivers out there don't intend to use anything
> they *learned* to get their drivers license,

Give me an example, I can't think of one thing you learn to get a
driver's license that you wouldn't need to know when you drive.

why not drop that
> requirement too? Just let 'em all drive, drop the roadtest
> requirement!

That would be like dropping the rules and technical requirements on the
ham test. Both are needed and used by everyone in Ham radio. We are
talking about Morse Code which does NOT have to be used in order to
operate Ham radio. If it was required to learn how to ride a horse to
get that driver's license, then you could argue about that, but they
don't test for stuff EVERY driver won't need to know in order to drive.

> Ever stop to think that maybe the government intended to keep some
> people out?

No, they droped the code on the tech to get people in, not out. They
would drop the code for other classes too if they could, but it is an
international requirement, so it will take a bit longer to do.

Why not drop the code requirment for commercial broadcast
> while we're at it?

There never was or is a code requirement for commercial broadcast.

I have a 811H for about 3 years now. It is used at the PI4ZLD contest station. In The Netherlands 400 watts is the legal limit so this amp is very well suited for us. We did some cqww rtty contest with it: 48 hours @ 400 watts. (And of course all the other big CW-contest) No problems so far.

4161. Re: IC-2710H - Any Opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-17 00:00:00 UTC
From: John Frank <jfrank@mailbag.com>
Message-ID: <01be9ffa$a7529480$98b2adcd@jfrank.bind.net>
Source record: 108080

About a year and a half ago, I installed an Icom 2710H in my truck. People frequently tell me I am overdeviating to the point of distortion when I take the protective cover off the touch tone pad on the microphone. However when I put the cove on, People tell me I sound muffled. Other 2710H users have had similar problems. Regarding the receiver: it is capable of receiving numerous signals simultaneously when I drive past a tower that supports a UHF tv station, one ham repeater, paging services, commercial repeaters, and the tvstation remote receivers. Part of the problem may be front end overload. The built in attenuator doesn't solve the problem. By comparison, the 207H in my car doesn't have some of the same problems when I drive the same route. That is, I don't hear paging services when I listen to the weather service broadcasts on 162.40 MHz and I don't hear the audio from soap operas when I monitor my favorite two meter repeater. The two rigs are the same size but I prefer the 207H. If you need the extra features found in the 2710H, go for it. But if you don't need some of the whistles and horns on the 2710H, take a look at the 207H. 73 John N9CH

Cleve, I've got a TM-261A and it's a pretty
neat little rig. Yes, it's capable of scanning
programmed frequencies. It has VFO scan which allows you to scan from the
lowest to
the highest freq and it has memory scan to
permit scanning of stored frequencies. OF
course, you can lock out the ones you don't
want to scan. It also permits program scanning in which you set the lower and
upper limits. Call/VFO scan is also available
and permits you to monitor both the call
channel and the current VFO frequency.

Hi,
Perhaps I should have told you that its been a while since I used a radio
and could not find my notes for the formula.
****
frequency in Mhz = 300 divided by the wavelength in meters
****
I fear you think Im some slob who sits at home all day illegaly using
SSB/Muppet radio. (Im actually a managing director of a succesful software
company)I dont have much spare time due to my business and therefore assumed
a newsgruop might want to help.

I thought hams where supposed to be helpful....

Unbelievable story, Rick. You had a problem with a purchase, called up
the dealer, and had it all straightened out immediately...

Why didn't you post defamatory public letters in newsgroups when you
first noticed the missing parts, Rick? You know, bitch and moan BEFORE
you called the dealer to straighten things out?

Message-ID: <7hq2us$3ph$1@nnrp1.deja.com>
Source record: 108096
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.dx

Any spelling mistakes Chip ?

Several of the ... at Dayton were looking at the FT100....I thought this might be of interest:

I got my 1000MP back today from Yaesu, they replaced the Control Unit. Chip told me he knew of no known problems with this part...yet, I found several others at the various hospitality suites who had to return their 1000MPs for various problems relating to the control units.

Why can't Yaesu be honest with us? I keep hearing from my JA buddies that Yaesu Japan is losing money and in financial difficulties....this could be why, their home market knows what's up.

Used but in excellent condition. Metalic braces and rotor bracket have been sand blasted and refinished. Complete and assembled with newly fabricated anchor brackets. Rotor shelf bolts up for a Ham IV, thrust bearing has been disassembled and repacked with new bolts added, and the 7' X 1 7/8" mast is included. Local pick up only in the Philadelphia, PA area. Local delivery and installation is available.

Not a problem. You can do wonders to improve your situation for a
fraction of that!

Look in QST and pick up an antenna compendium (there are several
available, as well as a CDROM).

You can build a great colinear out of coax.
You can build a j-pole
You can build..... (use your imagination).

This is what ham radio is all about.

Let me know how it goes.

: >>...with my old ic 2sat...

: Rotten apples versus oranges argument. I regularly use Maha NiMH FNB-47
: batteries on my FT50 (and Vertex VX-10 HTs). 1,800mAH, excellent
: performers.

: The "break point" for high power output on the Yaesu FT-50 is either 8.0
: or 8.1 VDC (according to W&W and Yaesu Tech Support). The FNB-47 is
: rated at 7.2VDC - so you are very close to max power out (which,of
: course, you might not need if you're working nearby repeaters, or
: simplex with a couple miles).

: > ...the large 1100 mahr battery is too large to allow the
: > radio to fit in yaesu's own carrying case for the radio so you're
: > forced to carry the damn thing in your hand.

: The only "Yaesu" case I have purchased is the one with the elastic
: sides, which accomodates either size battery...

: I also use The Pouch that is specifically made for the FT-50/VX-10, sand
: the battery's belt clip.

: >...if i hadn't received the damn thing as a gift, i wouldnt buy it!

: Wow...really I am really sorry that you feel that way...I believe,
: though, that if you were to purchase a Maha MH-C777a Universal
: Conditioner/Charger (properly works on both NiMH and NiCad packs from
: 4.8-to-12VDC) and a Maha FNB-47 NiMH pack or two that you would be very
: pleased with the FT-50.

With Fieldday and the June VHF contests just around the corner, why not save the old "voice box" and use a software digital voice keyer. "VoiceKeyExpress" works great on your lap top or full sized PC. Version 1.3.5 is available for downloading at the URL below. Runs as a standalone application, or is fully integrated with the FT-Manager radio control software. Don't wait till the last minute to register, as I'll be on vacation during both of the contests.

Frank;
Ten-Tec announced a new Pegasus Computer transceiver, similar to the Kachina, due in July, 1999, at $895. So it is not a "rig" per se, since U need a computer to operate it. That is all I know for reading the Ten-Tec relector.

73-Still happy with Omni VI PLUS here.

4196. New Ten Tec - Pegasus LOW BAND!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-17 00:00:00 UTC
From: Frank Krozel <frank@electronicinstrument.com>
Message-ID: <7hpdf5$8pv@sjx-ixn5.ix.netcom.com>
Source record: 108115

I just posted the question on IF there was a new Ten Tec announced, but
decided to call instead.
Here is what I heard.
The new PEGASUS was announced, and they are taking orders. $895.00
The Pegasus is a virtual front panel HF rig, used with your PC, or notebook.
100 watts
34 filters available built-in for the receiver
For CW, 375-750Hz BW, in 75Hz steps
For SSB, 900-3,000Hz in 150Hz steps
For AM, 3.3Khz to 6.0Khz in 300Hz steps
ALL are 1.5:1 shape factor, DSP!
DSP! technology throughout
Noise floor -126dBm@3Khz bandwidth
IF freq, 45Mhz, 455Khz, 12Khz
Receiver recovery less than 20mSecs
10.75"H x 5.125"Wx11.5"D Seems like a tower of sorts
CW offset 400-900Hz, DSP selectable
1'000's of memories
Optional Remote Encoder/Keypad
Works with that old 486 computer
Windows 3.1, 95, 98! Compatible
uses only 1Meg of H.D. space
Adjustable AGC
Autotracking sidetone

Disclaimer: I don't work for Ten Tec (1-800-833-7373), but do enjoy their
products very much. I currently have a Paragon, Scout, 1340, both
transverters for VHF, and a few others. Frank Krozel KG9H Oh... yes I will
be ordering one of them!

Tom,
Make J pole antenna. I have seen muliban ones diagramed out, Great gain for some copper pipe. Antenna's is the cheapest and best bet for the money. Mabe 10 bucks. Then you can buy your amp., Check Mirage.

4202. Wanted:Police motorcycle radios

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-17 00:00:00 UTC
From: Mark Masa <mark@kelltech.com>
Message-ID: <374064B7.5CFBE070@kelltech.com>
Source record: 108121

I'm restoring a 1952 Harley Davidson police motorcycle and the only thing that I'm missing is the radio setup. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading material with the few other people in the country who are into this sort of thing. Specifically, I think what is correct for my bike is a Motorola FM TRU41. It is two boxes about 18" long x 10" wide x 10" high. (these dimensions are approximate) The receiver was in one box and the transmitter was in the other. The power supply was in one of the boxes also, but I'm not sure which one. There are interconnecting cables between the two boxes as well as a cable that went up to the control head mounted on the handlebars. The mic came from one of the boxes and was mounted on the tank. It is a tube radio. This is the one I need for my bike but am interested in ANY ANY ANY ANY pre 1970 motorcycle radio, especially if it has tubes. I hope somebody can help me.
Regards
Mark

>used outside of 144-148 MHz? If yes, how?

Pots are likely to change bias current or signal drive levels, but have no effect on frequency. To change frequency, you'll need to adjust capacitors or coils to shift the frequency of tuned circuits. You'll probably have to adjust *every* tuned circuit in the radio, so changing operating frequency is not going to be easy.

Source record: 108125

w7ox@mindspring.com writes:
>Actually I mean what I said. Attibute of the batteries.

Let me try again, then. The batteries used with the FT-50 can be charged faster than the one in the VX-5, simply because of the difference in chemistry.

To do this, you need a fast charger designed for the battery. With the FT-50, you have to buy an external charger, while the VX-5 has one built in.

So the FT-50 *batteries* can charge faster than the VX-5 battery, even though the included *chargers* are the other way around.

I bought a new Yaesu FT-8100 at Dayton. While driving home it almost flew off the mount while passing downtown Indianapolis from intermod interference. That surprised me considering I haven't had that trouble with my FT-8000. To make matters worse to while transmitting at 146.22 it overwhelmed the front-end of the 440 receiver set at 446.00. 146.22 X 3 = 438.66. Is this overload normal?

There's a Kenwood TM V7A used radio for sale, returned to the dealer, with a 30 day warranty, costing 20% less than new (about what I'd have to pay for a new TM G707 that I initially wanted to buy).

I wonder if it makes sense to buy a new radio with a one-year warranty and pay the full price? How reliable are such radios?

I appreciate your comments!

Thanks,

Jack

Hi Doug... yes there is an internal DC supply for the 745, but in my experience, they are noisy and hard on the regulator board...especially the resistors... I haven't seen many that have not over heated the resistor on the board... it does make for a smaller footprint, but I alsways preferred the external Supplies... Great choice for a rig though... especially if you decide to run transverters for the higher bands... good luck and 73 de Jordan...

The thing about Morse Code is that it seems that the OLD TIMERS are
saying that we did it and you should too. That is baloney. What some
cheese with that wine?

From the few owners I've heard on my local repeater, the TX audio is terrible on those things. It is over-deviating, very "nasal", and tinny.

I must agree that due to intl. treaty users on the hf bands are required to and should know cw. however I dispute the use of a speed test in that particular language for upgrade or access to spectrum. 5wpm satisfies the intl. treaty, we should be testing on tech. knowledge or added knowledge of the rules and regs, for upgrade purpose. It used to be that you needed to know hand signals for your drivers test. I believe they dropped that requirement in my state, but even if it was still in place, should we test how fast one can give them to upgrade our drivers license, or how fast we can recognize various shapes and colors of road signs. No of course not and speed should not be an issue in amatuer radio cw. Only a working knowledge of the code is needed and that is what should be mandated. If an individual wants to use cw to a large extent and increases their speed, so be it, but for others that use fm ssb etc. basic working knowledge is all that is necessary and all that should be required.

>Could you explain 2m,6m etc in mhz
> i.e 2m = 'x'mhz to 'x'mhx

The point is that you need an amateur radio license issued by the FCC to transmit with the radio you're thinking of building. Anyone with a license would know this. Folks are a bit testy as there are so many unlicensed operators out there. Check out www.arrl.org for information on getting a ham license. FYI, the 6 meter band is 50 - 54 MHz, and the 2 meter band covers 144 - 148 MHz. Best of luck, and welcome to the hobby.

I have a Radio shack mobile scanner model 2046 that is like new with the box and all paperwork. It is a 100 channel scanner and has all the normal scaning functions. I would like to trade this towards the Radio Shack model 242 2M mobile radio, or any other 2m mobile that will receive 150-160 mhz and has scannable memories. I would consider a 242 for cash for the right price. Please email direct if yo uhave something to trade...
Thanks
Tim

Well said.
I'm thinking of one area where I use Morse outside of ham radio: flying. Navigation aids identify in Morse, but a 5 WPM proficiency suffices. Good. I like your idea.

No, I'm saying that if you want the same license I have, pass comparable tests.
Is CW relevant? The Navy thinks not. It's still valid and satisfying.
I'm no 35 WPM Extra, just an Advanced. I took my last code test at the Dallas
FCC office in April of 1964, 13 WPM. The damn government already stole my First
Phone, I don't want it to redefine my ham license, too. Just create a new
ticket? Been done.
The service does need to evolve with technology, no one uses spark much.
I have no simple solution.

I'm looking for: Motorola STX model 821 or MTS 2000 Flashport series radios. They must be 800mhz and Smartnet ii capable. These are for a small dept. here in the Indy area that is looking for a way to get around paying the enormous price of new ones from the local radio authority. If they have extra batteries or chargers or public safety mics that would be great also but not needed. Anybody that has these in good to fair condition can e-mail me at paramike@indy.net with prices and terms, I will forward the info to the chief of the dept. inquiring about the radios. Thanks for your help, Mike

4238. Yaesu VX-5R barometer, altitude

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <374221BB.D63A4BDB@quantacorp.com>
Source record: 107907

Here is how the VX-5R computes pressure, altitude:

First, the signal from the SU-1 unit,SENS=0 to 3V is digitized to BAROAD=0..255. Then the pressure, in hpa is INT(BAROAD*2.08816+607.25). Range is from 607 to 1139hpa. Actually 617 to 1139, as readings 0..4 indicate SSB module, not barometer.

Values of 627,619,621,623,626,628... etc would be obtained. To improve the resolution, the radio takes a moving average of 16 readings (0.5Hz) by adding the new reading to the average and dividing by two (mov.avg=(mov.avg+new.reading)/2). Not sure why it is done this way, instead of a simple arithmetic average of 16 values, but it does allow one to see other intermediate values as dithering noise is added to the SENS signal.

At this point, the sensor is temperature compensated, in three ranges (-20..0,0..25 and 25..80C), with 25C normalized as 1.00 (although it appears to have a BUG at one infection point). The compensation is -2.1% for -20C, -1.2% for 0C, 0% for 25C, +0.5% for 46C. Barometer offset is added and this result is displayed.

Altitude is calculated from this compensated pressure, in 5 linear ranges, and is designed to work from -1041 to 3951m. The formulas are:

Pressure from 0 to 653: H=12.25*(1013-P)-900
Pressure from 654 to 742: H=11.11*(1013-P)-500
Pressure from 743 to 842: H=10.00*(1013-P)-200
Pressure from 843 to 954: H=8.919*(1013-P)-16
Pressure from 955 to : H=8.334*(1013-P)

Whatever theory one might find to support this, one inherently bad thing is the taking of temperature INSIDE the radio, which changes quickly specially during full power transmit, and isn't necessarily the sensor's temperature. Solutions? A separate temperature sensor at the SU-1, or closer to it, or a software temperature moving average to simulate the slower change of temperature of the sensor. Now, the sensor is immediately below the battery, and its temperature might be much more dominant than the radio's... This is why many reported initial correct readings, unstable minutes later...

Still, a very cute feature on the radio. It just doesn't seem to be much useful if you use the VX-5 as a RADIO. Should be fine if you only use it as a Barometer/Altimeter.

Maybe the idea behind it was for Yaesu to sell two VX-5's to each one of us, one for communications, one for altimeter? :-)

Regards,
Jose

The SM220/ BS8 is meant to work with the the 8.830 MHZ IF of the
Kenwoods. As I recall the FT 1000D has an IF on 9+ MHz so I dont think
you could get there without some pretty tricky mods to the BS8
DAve
K9NX

4251. fs- ICOM R-9000 Receiver, UNBLOCKED, Must Sell!

4252. Yaesu FT-2500M knob stopped working

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: "Joseph E. Morris" <kf4yso@mindspring.com>
Message-ID: <3740E643.F1634D02@mindspring.com>
Source record: 107921

Kind of odd, but the large knob on my FT-2500M just stopped working.
This is currently being used as a base station, so it's not getting
moved around. No locks are active (radio or microphone). All other
functions are normal.

Anyone else run into this?

4253. Wanted, 3395 Khz Heathkit coil

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: ne7x@aol.com

G'day

I have a UHF Antenna Mounted on my nudge bar, it's a 1/2 wave dipole that's ground independent
"That is doesn't need negative grounding"

What improvement in performance will I get if I drill a hole in the middle of the roof and put a standard 1/2 wave ground plane antenna ? I don't like the look of the antenna on the front of my Vehicle!

Pound for pound is the performance of these ground independent antennas as good as there ground plane counter-parts....

Any thoughts

WOW TIM..... 20 watts out..... 6 meters AND 2 meters in the same radio.
What will Ten-Tec think of next?
What an improvement over other radios like the the Icom IC 706,
with only 100 watts output on HF, 6 meters, and 2 meters.
Amateur Radio equipment is sure advancing by leaps and bounds.

Source record: 107938

Hi

I have a little trouble in understanding how much power my TS-50 must/can give to the antenna, speaking normally into the microphone.

In the 50W mode (And it gives 50W at cw) the peak power is about 20-30 watt. Whisteling into the mic gives 50W, but even shouting very loud will never peak at more than 40W

The gain control inside the station is at max position.

How much peak power could I expect ? And how much will cause trouble ?

Mogens

Radio is improving William...and Ten-Tec is making some great rigs. If you'd take the time and look over the spec sheet for the new gear on their web site. You might possibly admit the night and day difference between what the rice box radios and the Ten-Tec gear....Funny..you seem to have greater appreciation for Ten-Tec when you post to their reflector...a double life..?????

de Tim

Timo,

I wouldn't change a thing on that linear amp. The circuitry is designed for the 2 M band only and it probably will not deviate much. besides if you change that adjustment it will probably de-align the whole linear.

But the law has always been there, Ham radio is a club and if you require
membership you must adhere to the rules.
Can you drive a car on a public road without a license ?

There was an article in QEX a few years back where someone had developed
thier own control head for a kenwood 741. That mite be a good starting point,
as I imagine the interface is very similar.

good luck with your project!

4282. Re: New Ten Tec - Pegasus LOW BAND!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: William Lee <willee@interconnect.net>
Message-ID: <7hrurl$ea8$1@nntp4.atl.mindspring.net>
Source record: 107951

Well Tim, If you HAVE read my posts to the Ten-Tec reflector you know that
I own several Ten-Tec radios and I have done my share of bitching about what
I dont like about some of them.

Not all Ten-Tec products are as good as others.
I think they have missed the mark with their new 6N2 radio as it really
offers nothing that other "riceboxes" can not do better.
(Am I barred from the Ten-Tec reflector for saying that?).

I like good equipment no mater who makes it. Ten-Tec has made some damm good
equipment and some not so good equipment as well. But then.. So have all the
other makers.

Day and Night difference???
Could you please be just a little more specific?
As far as Specs on Amateur Radios go ... they have not really improved very
much over the last 10 years.
Just more bells and whistles on the same old circuits.
The last big advance was DSP and look how long it took to be incorporated
into the current line of radio gear.

Double life ??? ...Thank you ..... some people dont even have one.

William Lee N5WRX

What could be done is use a converter from the 70 nominal MHz IF output
of the 1000D to the 8.830 MHz BS8 input. Insert LO in proper relation to
prevent inversion of frequency display.

John:

There's a mod for the mic to cut down the gain. It's a free fax from Icom. You just remove one surface mount resistor - no big deal. I had the same problem with the HM mic - and I coined the HM for Hot Mic.... As far as the overload issue, yeah it's kind of a pain, but not too bad. I just make sure the squelch is set just so, the squelch also handles the IF gain (I think!)

4289. Re: Morse code

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: arongv@aol.com
Message-ID: <19990518120803.11113.00002326@ng-fr1.aol.com>
Source record: 107958

Gosh oh mighty, I never read such illogical dribble. If ya wanna bitch about the code requirement, there are more sound arguements than comparing music to FCC requirements.

And on the subject of FCC requirements in the tests, consider how many questions deal with applications others of us have no intention of using, like frequencies for bands we don't use, and packet, satllites, etc.

I don't object to the FCC's including other facets of ham radio that I don't intend to use, because I think they want a ham radio operator to be knowledgeable in more areas than black box operation.

Maybe what we need is a band set aside for all the guys who object to questions/requirements we don't like. (Gee, does that sound like 11 meters?)

When I first got on the air in 1948, I went on in CW because I couldn't afford the parts for a modulator. I could have cared less about anything pertaining to audio.

So, consider this: how many other questions are asked in areas where we have no intentions of applying the knowledge the FCC requires? Without using calculators or working out equations on paper, can we answer all the quetions on the more advanced license classes? And knowing that, how many hams today build equipment or seriously dig into their transceivers' circuitry to fix something....or anything, and use calculators or work out equations to do it?

If we keep asking for questions/requirements that pertain only to our everyday interests in or use of communications technology, we'll end up with a test that requires us all to be a lot less knowledgeable overall. The result being that we rightfully get called "black box operators" as we one by one delete questions and/or requirements we think aren't relevant.

Given all the potential special interest deletions, a ham radio FCC test of the future would only deal with "operating" a ham station, because by and large, that's what's taking place right now.

Perhaps we need a new definition of a ham radio operator. Obviously, the FCC's definition is running contrary to the direction ham radio is taking. They're testing for knowledge using a definition more and more people disagree with.

Source record: 107962

Is this a joke or am I missing something here? I thought the FT-708R was an old 80's HT that sold at hamfests for about $50 to $75 or so. I see the 208 for sale occassionally, which I believe is the 2 meter version of this rig and it seems to go for about $75 with a quick charger. Whats up here???

rskeeter wrote in message <3741764b.0@news.qnet.com>...
>Yaesu FT-708R UHF hand-held. Desk charger and radio in excellent condition.

How does this disagree with what I originally said? You keep
"correcting" my statements by saying the same thing in your own words.
Are you an editor in real life?

> To do this, you need a fast charger designed for the battery. With the
> FT-50, you have to buy an external charger,

Well, I already said I have the FT-50/51 quick charge; but it was not
cheap .. so I guess you could conclude that I already know this, Dave.

> while the VX-5 has one
> built in.
>

I believe the charge circuitry is built into the battery, not the radio
-- has to be, since the batteries can be charge while removed from the
radio. If that's what you mean, I agree. And that is why I said
"attribute of the batteries".

> So the FT-50 *batteries* can charge faster than the VX-5 battery, even though
> the included *chargers* are the other way around.
>

Damn! What did I say to make you think that I believe 1-2 hrs (FT-50
quuick charge) is longer than 2-3 hrs (VX-5R).

I must not be making my posts long enough to be clear. If so I
apologize.

But trust me: I hold three degrees in E.E and I do know about batteries,
even some that are really esoteric (e.g., designed for 10 yr life in
space).

I am in need of a regulated 0-50v 0-50 amp power supply.

I have been offered a Harrison Laboratories model 6456
which is a 0-36v 0-100a supply for $100.

Does anyone know if this could readily be converted to
a 0-50v 0-50a supply?

Does anyone have a schematic with component list and/
or a manual?

Is Harrison Labs still in business?

Thanks! & 73,
~~~

> RJ-45. If You could e-mail me with the mic jack pinout
> I would be most appreciative. Thanks in advance.
> Frank WQ1O

Frank, I wired up a Shure 526 to my 8100 and it works fine.

Looking at the mic connector on the radio,
pin 1 is on the right and pin 6 is on the left.

Pin 4 -- gnd
Pin 5 -- mic audio
Pin 6 -- PTT

These are what you need. You also MUST insert a 27k
resistor (1/4 watt will do) in series with the ptt line. The
radio must see a certain impedance in order for it to key
up. This step is mandatory!

Good luck.

Bob - KF9YH

4299. Icom 756 Pro???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: alan_r_miller@my-dejanews.com
Message-ID: <7hqolj$i1m$1@nnrp1.deja.com>

4303. Re: Icom PS85 RF noise

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: radio@miramarupx.com
Message-ID: <7hs108$2lfr@news2.newsguy.com>
Source record: 108012

The PS-85 is an affront to ham radio. There has been a thread regarding it on the Icom reflector, and I have been sent a dozen or so emails confirming your (my) experience with it.

Icom did not respond to my email, their tech folks they say "what problem?". A TIS at a major ham radio organization who queried them on my behalf was told that they knew of no problems with it, and that users should follow the "normal precautions" such as placing the PS as far from the transceiver as possible. Great idea with an 18" cord.

Your only option get your money back.

Mine was used and out of warrantee. I have pretty much cleaned it up. The only RFI precautions Icom engineered in is one ferrite bead on the ground wire of the IEC AC jack (a standard plastic ungrounded unit). I replaced this with an RFI suppressed IEC jack (such as you'll find in higher-end PC power supplies), which is grounded to the chassis. I put the existing ferrite bead over the black/white wires leading to the IEC jack, and a ferrite bead over the positive 13.8v leads on the top of the chassis (I had to cut the connector off the wires to do so). On the bottom of the chassis I soldered a .1uf 50v capacitor across the ground/13.8v traces. I put split beads over the 110v cord, and the 13.8v DC cord as close to the chassis as possible. Cost: under $15. I am open to any/all suggestions/alternatives to my uneducated efforts.

Icom shows no inclination to do the right thing with this particular failure of engineering. If they had any integrity, they would recall them or at least stop selling them.

w7ox@mindspring.com writes:

>How does this disagree with what I originally said? You keep
>"correcting" my statements by saying the same thing in your own words.
>Are you an editor in real life?

What you said wasn't clear. You said that the VX-5 has "fast charge",
which didn't make it clear whether you meant that the VX-5 battery
would charge faster, or whether the radio had a faster charger.

I posted a followup pointing out that the VX-5 has a faster charger,
but the VX-5 batteries had to be charged *slower* than the FT-50
batteries were capable of.

Then you posted the phrase "attribute of the batteries", not even a
complete sentence, which could have been read as saying that you disagreed
with me, and thought that the *battery* of the VX-5 was faster charging.
This isn't true.

>Well, I already said I have the FT-50/51 quick charge; but it was not
>cheap .. so I guess you could conclude that I already know this, Dave.

I don't care very much what *you* already know or don't - I was trying to
prevent other people reading this thread from getting the wrong impression.

>I believe the charge circuitry is built into the battery, not the radio
>-- has to be, since the batteries can be charge while removed from the
>radio. If that's what you mean, I agree. And that is why I said
>"attribute of the batteries".

The FT-50 batteries have no electronics inside - all of the charge
controlling circuitry is built into the radio, or the external charger.
LiIon packs normally have some electronics in the battery pack because of
the need for monitoring each cell individually. This may well contain
the charge rate controlling circuitry, or that may still be external.
(Apparently the VX-1 requires a current-limited AC adaptor, so there
the limit is external).

So if you meant "the charge rate of the VX-5 battery is set by the internal
charge circuitry, which is an attribute of the VX-5 battery" that makes sense.
I took "attribute of the battery" to mean "the battery determines the
charge rate, and the VX-5 is faster".

>Damn! What did I say to make you think that I believe 1-2 hrs (FT-50
>quuick charge) is longer than 2-3 hrs (VX-5R).

You didn't actually say anything about relative battery charge times.
That's one reason for my first posting.

>I must not be making my posts long enough to be clear. If so I
>apologize.

I, at least, misunderstood them. That might be my fault as much as yours.

In any case, anyone who has read this far now *does* know the relative capabilities of the two radios' batteries and chargers.

Dave

4305. FS Kenwood TS-440S-AT "MINT CONDITION" +Filters +PowerSupply +Speaker

FS Kenwood TS-440S-AT "MINT CONDITION" +Filters +PowerSupply +Speaker

Kenwood TS-440S-AT
+PowerSupply
+Speaker
+ 2 Filters

~ Mint Condition
~ Single Owner
~ Low Use

Package includes the following:

TS-440S-AT - With Built-In Antenna Tuner
PS-50 - Kenwood Power Supply
SP-430 - Kenwood Matching Speaker
YK-88SN - Kenwood 1.8KHZ SSB Filter
YK-88C - Kenwood 500 HRZ CW Filter
SM-TS-440S - Kenwood Service Manual
OM-TS-440S - Kenwood Operating Manual
Receipts - All HRO original purchase receipts encluded.

This rig is in factory new condition. It
is complete as listed above and includes
all original Kenwood equipment boxes.
Soon after the purchase of the above rig,
It was replaced with a Kenwood TS-950D
resulting in very low usage.

If you are seriously interested in purchasing
a top quality rig, this is it. $850.

Includes ground UPS shipping in USA.

4306. WTT: MC-60A For Heil Pro-Set

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <Zti03.26$kn1.1013@iad-read.news.verio.net>
Source record: 108015

Hello. I'm interested in trading my Kenwood MC-60A desk mic with pre-amp for a Heil Pro-Set mic with either an HC-4 or a HC-5 element and an adapter for a Kenwood Radio (8 pin female). All I require is that the mic comes with one of the above elements, with an adapter, and any other necessary cables (although such things as a box, manual, etc don't hurt either). I would prefer the mic to work 100% and be at least a 7/10 cosmetically.

My MC-60A works 100% and cosmetically it's around a 9/10. Moderate use on it with no problems at all. Comes with the mic, base stand, manual, and all necessary cables. Wired for 8 pin female connector. Please let me know if you have any questions, or if you have a Heil Pro-Set and are interested in trading. Thanks a lot for reading.

4307. WTT: PRO-2035 For Ten-Tec 253 Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-05-18 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <Tyi03.31$kn1.1013@iad-read.news.verio.net>
Source record: 108016

Hello. I'm interested in trading a Radio Shack PRO-2035 base scanner for a Ten Tec 253 2KW auto-tuner. All I require is that the tuner works 100%, and is at least a 7/10 cosmetically. It also must include some type of power cord (preferably AC), and any other accessories (box, manual, etc) doesn't hurt either.

The scanner is at least a 9/10 cosmetically and it works 100%. It has very, very low use, and I've had no problems with it at all. It has 1000 memory channels, one touch weather, VFO knob, NFM/WFM/AM, RF ATT, RX from 25-520 and 760-1300 MHz (minus cellular), keypad, and data skip. This scanner can even be modified so that it can receive VHF/UHF in CW/SSB in addition to FM/AM if you have a SW Receiver, but I have not modified it for anything.

The scanner comes with the indoor telescopic antenna, AC power cord, base stand, original box, original packaging, and the original manual. Please let me know if you have a Ten-Tec 253 and are willing to trade for my scanner, or if you have any questions. Thanks a lot for reading.

From: John <chia@korrnet.org>

Subject: ***For Sale*** Kenwood TH-22AT 2 meter HT! $55

I have a Kenwood TH-22AT
2 meter HT that I got in trade on some

other equip. I would like to sell it if anyone has a use for it. The
thing

is that it seems to be about 5kHz off freq. Or that is what it seems
to

me. I do not have the equipment here necessary to check it out and
do not

need it. The RX and TX is great on it if you tune up 5kHz from the
freq.

you want. If anyone wants this HT I have all the original stuff, box,

manual schematic, and everything for it, then let me know via. E-Mail
at

one of the addresses below and I'll send it out to you UPS ground for
$55

to cover S&H for myself. Please let me know... thanks.... hopefully

someone can use it, or better yet knows someone or has the ability
to fix

it and use it. Thanks...

The 1000MP has some great features, but relatively high speed (25 WPM +)

QSK CW is not one of them. The AGC circuit does not allow the receiver to

recover in time to hear between characters ...

>Tim Randa wrote:

>> Tony...you left the best cw rig off your list..Ten-Tec Omni-VI plus

>is the omni a double conversion rx? wondering.

Yes. The OMNI V and VI both use 9 MHz for the first IF and

6.3 MHz for the 2nd IF. The first IF uses a stock 2.4 KHz

8 pole crystal filter ahead of one other possible optional

filter at the 9 MHz IF, then followed by one other optional filter

(or the 2.4 KHz stock filter) in the 2nd IF at 6.3 MHz. This

is said to be a real advantage since the 1st IF has a good,

narrow filter in there at all times for SSB and CW, unlike

most all other late model rigs that have a very wide filter

for FM in the 1st IF.

If you are not so concerned with SSB, my own experience tells me

that the OMNI VI may well be better than the ones you list, but

for SSB it may be equal, but not having some of the cooler features.

Comments about this ad.

1) The TS-870 has NO plug in filters (I wish it did)

2) This filter does fit the TS-850 however and would be a great addition

for the CW op.

3) The advertised bandwidth of this filter is 270Hz NOT 300Hz

From: Paul Cooper <pcooper@primenet.com>

Subject: FS Triex tower/Sommers Ant

During the last week of June, I may wish to sell my Tri-ex LM-354 with

foldover base and 40/1 winch, including my Sommers 7 element Log

Periodic type antenna with the 40 meter attachment. The LM-354 was

restrung in 1993.

The Sommers antenna has been on the tower since June of 1993 and is one

of the world's premiere radiators; it has never had to be worked on

since it was put up and has close to 1.5:1 or lower VSWR across the

entire band on every band except 40; 40 meters exhibits the same VSWR

curve as a tuned yagi.

We will move to Oregon at the beginning of July. If I do the labor of

removal and packaging of the antenna and also take the tower down, then

I shall take them with me to use there. In this sale, the buyer must do

the labor.

If you are interested, the contact data is below.

From: bd480@freenet.carleton.ca (Eric Paquin)

Subject: FT-51R DTMF decoder

You need to enable the Message ID first.

1. you select FM MSG, you can have MSG or MSGid in the left of the
display.

2. select FM CALL, this will put a phone on the right of the
display.

3. select FM for 2 sec and select 9. The memory 9 is where the
16 tones

will be decoded.

If you want to see the last one that came in, use the dial and schroll
all

the way to the right. The trick is the MSG need to be selected.
The MSG

will enable the decoder to work all the time to diplay a message.

Good luck from VE2PEY, Eric.

Its not just a case of wiring pin for pin. A friend has the radio and

tried to wire a mobile mic up and it failed. The Yaesu mic has some

electronics in it for all the buttons in the mic.

Be interested to hear if someone has managed this though!

From: rick@area.com (Richard Karlquist)

Subject: FT757 linear connections question

I am trying to interface my FT757 to a linear. The manual shows

non QSK linears are connected to PTT, which I measured with my

scope to have a 25 msec head start before RF comes out of the

transceiver. It shows QSK linears connected to "TX GND" on

the band info connector, which I measured to have a 5 msec

head start before RF appears. It also shows an "Inhibit" connection

that the manual implies allows the linear to hold off the

transmitter until its T/R relay has been activated. There is

a "linear" switch that is supposed to be pushed if and only

if a QSK linear is used. When this switch is in the non QSK position

it clearly shorts the inhibit input to ground on the inboard side

of a series diode.

Here's the mystery. The linear switch seems to have no effect

one way or the other, nor does the inhibit input. On the schematic,

it shows the INH signal going from the local to the RF board at

which point it is grounded! So it appears like the feature has

been defeated internally without changing the documentation to

reflect that.

Can anyone clear this up?

Rick Karlquist N6RK

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)

Subject: Guide to the rec.radio Newsgroups

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb,

rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet

mailing list counterparts and complements. It is intended to serve as a

guide for the new reader on what to find where. Questions and comments may

be directed to Jeffrey Herman, KH6O, (jeffreyh@hawaii.edu), or Paul

Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History

=======

Way back when, before there was a Usenet, the Internet hosted a mailing list

for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions

were held on the mailing list, and sent to the mailboxes of those who had

signed up for it. When the Usenet software was created, and net news as we

now know it was developed, a newsgroup was created for hams: net.ham-radio.

The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became

progressively higher. First one by one, and then as part of two

reorganizations, what was once one group became many. In the process,

developments elsewhere on the net were reflected in the groups as they were

created, most notably the change to place all of the ham radio groups in one

hierarchy.

The collection of newsgroups continues to grow as more people join the net,

and as more topics of discussion gain volume, I expect to see more groups be

created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the

notable exception being rec.radio.swap. There are also a few mailing lists

that don't have newsgroups.

The Current Groups

==========

It's important to post messages to the group that's appropriate for them,

and not to the groups that aren't. The whole idea of having different

newsgroups is so that folks who aren't interested in, say, homebrewing,

don't have to wade through messages about homebrewing on the way to read

about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio

was renamed to during the first major reorganization. Any message that's not

more appropriate in one of the other groups belongs here, from contesting to

DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to

(surprise!) digital amateur radio. This doesn't have to be the common

two-meter AX.25 variety of packet radio, either; some of the most

knowledgeable folks in radio digital communications can be found here, and

anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital

modes, such as AMTOR, RTTY, and Clover, but things like digital voice and

video as well. The former group, rec.radio.amateur.packet, was removed on

September 21st, 1993. It is obsolete, and you should use .digital.misc

instead (or the appropriate new mailing list, mentioned below). The group

has .misc as part of the name to allow further specialization if the users

wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became

evident shortly after the original group was formed: Hams don't just swap ham

radio gear, and other folks besides hams swap ham equipment. If you have radio

equipment, or test gear, or computer stuff that hams would be interested in,

here's the place. Equipment wanted postings belong here too. Discussions about

the equipment generally don't; if you wish to discuss a particular posting

with the buyer, email is a much better way to do it, and the other groups,

especially .equipment and .homebrew, are the place for public discussions.

There is now a regular posting with information on how to go about buying and

selling items in rec.radio.swap; please refer to it before you post there.

To answer a frequently asked question: No, there is no mailing list that

goes along with this group. If you can't read Usenet news directly, you're

out of luck.

The group rec.radio.amateur.policy was created as a place for all the

discussions that seem to drag on interminably about the many rules,

regulations, legalities, and policies that surround amateur radio, both

existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part

97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's

now legal to order a pizza on the autopatch, if you're not in the pizza

business - as well as complaints about now-preempted local scanner laws

hostile to amateurs, but plenty of discussion about what a bunch of rotten

no-goodniks the local frequency coordinating body is, as well as the

neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens'

Band radio service. Such discussions have been very inflammatory in

rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and

rec.radio.amateur.* unless the topic is genuinely of interest to both hams

and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where

informational messages from across rec.radio.* may be found, regardless of

where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and

radio modification instructions. This group is moderated, so you cannot post

to it directly; if you try, even if your message is crossposted to one of

the other groups, your message will be mailed to the moderator, who is

currently David Dodell, WB7TPY. The email address for submissions to the

group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-

trivia should be directed to rec.radio.info-request@primenet.com. For more

information about rec.radio.info, consult the introduction and posting

guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew,

and .space are for more specialized areas of ham radio: discussions about

antennas, the older tube based amateur, military, and commercial gear,

commercially-made equipment, homebrewing, and amateur radio space operations.

The .equipment group is not the place for buying or selling equipment; that's

what rec.radio.swap is for. Similarly, the .space group is specifically

about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle

Amateur Radio EXperiment; other groups cover other aspects of satellites and

space. Homebrewing isn't about making your own alcoholic beverages at home

(that's rec.crafts.brewing), but rather construction of radio and electronic

equipment by the amateur experimenter. The .dx group is devoted to long

distance amateur communications. Each of these subgroups has its own

charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are

available by Internet electronic mail in digest format; send a mail message

containing "help" on a line by itself to listserv@ucsd.edu for instructions

on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a

gateway at the University of Texas at Austin. To post a message this way,

change the name of the group you wish to post to by replacing all of the '.'s

with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to

that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may

crosspost by including multiple addresses as Cc: entries (but see below). This

gateway's continued availability is at the pleasure of the admins at

UT-Austin, and is subject to going away at any time - and especially if

forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

==========

In addition to the mailing lists that mirror the Usenet newsgroups, there

also are a few that stand alone. These cover specific areas of ham radio,

and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio.

To join, send email with the word "subscribe" on a line by itself to

cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also

joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal

persuasion. You can join this one be sending "subscribe vhf" on a line by

itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power

outputs. To subscribe, send an email to listproc@lehigh.edu and only

write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To

subscribe, send an email to majordomo@contesting.com and only write:

subscribe topband and follow the instructions you'll be sent.

This site, contesting.com, also hosts a couple dozen other ham-related

e-lists. Use the above address, and only write: lists to get the entire

index.

The Boatanchors e-list is devoted to the older tube-based ham, military,

and commercial communications gear. To subscribe, send an email to:

listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology,

there is the Glowbugs e-list; send an email to:

majordomo@piobaire.mines.uidaho.edu and only write:

subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email

to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe,

send an email to: ham-radio-history-subscribe@egroups.com - leave

the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted

to each state, manufacturer, mode, band - too many to state here. Send

an email to majordomo@qth.net and only write: lists
to get the

complete index.

For one of the most complete indexes of email lists, see the excellent

web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves;

that doesn't work very often, and is very annoying to those on the
list.

Also, please keep your electronic mail address current with any mailing

lists you subscribe to, as dealing with returned email is a nuisance
for the

person maintaining the mailing list.

A Few Words on Crossposting

==========

Please do not crosspost messages to two or more groups unless there
is genuine

interest in both groups in the topic being discussed, and when you
do, please

include a header line of the form "Followup-To: group.name" in your
article's

headers (before the first blank line). This will cause followups to
your

article to go to the group listed in the Followup-To: line. If you
wish

to have replies to go to you by email, rather than be posted, use the
word

"poster" instead of the name of a group. Such a line appears in the
headers

of this article.

One of the few examples of productive cross-posting is with the rec.radio.info

newsgroup. To provide a filtered presentation of information articles,
while

still maintaining visibility in their home newsgroups, the moderator
strongly

encourages cross-posting. All information articles should be submitted
to the

rec.radio.info moderator so that he may simultaneously cross-post your

information to the appropriate newsgroups. Most newsreaders will only present

the article once, and network bandwidth is conserved since only one article is

propagated. If you make regular informational postings, and have made

arrangements with the moderator to post directly to the group, please

cross-post as appropriate.

From: "John Frank" <jfrank@mailbag.com>

Subject: IC-2710H - Any Opinions?

About a year and a half ago, I installed an Icom 2710H in my truck.

People frequently tell me I am overdeviating to the point of distortion

when I take the protective cover off the touch tone pad on the microphone.

However when I put the cove on, People tell me I sound muffled.
Other

2710H users have had similar problems. Regarding the receiver:
it is

capable of receiving numerous signals simultaneously when I drive past
a

tower that supports a UHF tv station, one ham repeater, paging services,

commercial repeaters, and the tvstation remote receivers. Part
of the

problem may be front end overload. The built in attenuator doesn't
solve

the problem. By comparison, the 207H in my car doesn't
have some of the

same problems when I drive the same route. That is, I don't
hear paging

services when I listen to the weather service broadcasts on 162.40
MHz and

I don't hear the audio from soap operas when I monitor my favorite
two

meter repeater. The two rigs are the same size but I prefer
the 207H.

If you need the extra features found in the 2710H, go for it.
But if you

don't need some of the whistles and horns on the 2710H, take
a look at the

207H. 73 John N9CH

Subject: Icom 710 Marine SSB Mods......

Can someone help me with the mod to open this radio to transmit on the

ham bands?

Thanks in advance......Steve......AC6OB.

Subject: Kenwood TM-733A control head commands

..

The time is nearing where
I can sit down with a 733A and begin

to document the communications
between the control head and

main unit. My plan
is to eventually develop a program to

control the 733A completely
from a computer since it seems

the control head has no
more functionality than to tell the

main unit where to tune,
volume level, etc.

So, is anyone or has anyone
worked on this? Will I be

reinventing the wheel?
I won't get to it until July, but if

anyone has worked on this
before, I'd like to get in touch.

Subject: Mobile radio advice

Thanks

Could you explain 2m,6m etc in mhz

i.e 2m = 'x'mhz to 'x'mhx

tct

If it needs to be explained, you don't need the rig. :)
